Introduction: Informal History and Brief Outline	xiii
0.1. Canonical forms, and catalecticant matrices of higher partial derivatives of a form	xiii
0.2. Apolarity and Artinian Gorenstein algebras	xviii
0.3. Families of sets of points	xxi
0.4. Brief summary of chapters	xxii
 Part I. Catalecticant Varieties	 1
Chapter 1. Forms and Catalecticant Matrices	3
1.1. Apolarity and catalecticant varieties: the dimensions of the vector spaces of higher partials	3
1.2. Determinantal loci of the first catalecticant, the Jacobian	16
1.3. Binary forms and Hankel matrices	22
1.4. Detailed summary and preparatory results	41
Chapter 2. Sums of Powers of Linear Forms, and Gorenstein Algebras	57
2.1. Waring's problem for general forms	57
2.2. Uniqueness of additive decompositions	62
2.3. The Gorenstein algebra of a homogeneous polynomial	67
Chapter 3. Tangent Spaces to Catalecticant Schemes	73
3.1. The tangent space to the determinantal scheme $V_s(u, v; r)$ of the catalecticant matrix	73
3.2. The tangent space to the scheme $\mathbf{Gor}(T)$ parametrizing forms with fixed dimensions of the partials	79
Chapter 4. The Locus $PS(s, j; r)$ of Sums of Powers, and Determinantal Loci of Catalecticant Matrices	91
4.1. The case $r = 3$	92
4.2. Sets of s points in \mathbb{P}^{r-1} and Gorenstein ideals	102

4.3.	Gorenstein ideals whose lowest degree generators are a complete intersection	108
4.4.	The smoothness and dimension of the scheme $\mathbf{Gor}(T)$ when $r = 3$: a survey	116
Part II. Catalecticant Varieties and the Punctual Hilbert Scheme		129
Chapter 5. Forms and Zero-Dimensional Schemes I: Basic Results, and the Case $r = 3$		131
5.1.	Annihilating scheme in \mathbb{P}^{r-1} of a form	135
5.2.	Flat families of zero-dimensional schemes and limit ideals	142
5.3.	Existence theorems for annihilating schemes when $r = 3$	150
5.3.1.	The generator and relation strata of the variety $Gor(T)$ parametrizing Gorenstein algebras	151
5.3.2.	The morphism from $Gor(T)$: the case $T \supset D(s, s, s)$	156
5.3.3.	Morphism: the case $T \supset D(s - a, s, s, s - a)$	167
5.3.4.	Morphism: the case $T \supset D(s - a, s, s - a)$	172
5.3.5.	A dimension formula for the variety $Gor(T)$	179
5.4.	Power sum representations in three and more variables	182
5.5.	Betti strata of the punctual Hilbert scheme	189
5.6.	The length of a form, and the closure of the locus $PS(s, j; 3)$ of power sums	197
5.7.	Codimension three Gorenstein schemes in \mathbb{P}^n	201
Chapter 6. Forms and Zero-Dimensional Schemes, II: Annihilating Schemes and Reducible $Gor(T)$		207
6.1.	Uniqueness of the annihilating scheme; closure of $PS(s, J; r)$	208
6.2.	Varieties $Gor(T)$, $T = T(j, r)$, with several components	214
6.3.	Other reducible varieties $Gor(T)$	224
6.4.	Locally Gorenstein annihilating schemes	226
Chapter 7. Connectedness and Components of the Determinantal Locus $PV_s(u, v; r)$		237
7.1.	Connectedness of $PV_s(u, v; r)$	237
7.2.	The irreducible components of $V_s(u, v; r)$	241
7.3.	Multisecant varieties of the Veronese variety	245
Chapter 8. Closures of the Variety $Gor(T)$, and the Parameter Space $G(T)$ of Graded Algebras		249
Chapter 9. Questions and Problems		255

Appendix A. Divided Power Rings and Polynomial Rings	265
Appendix B. Height Three Gorenstein Ideals	271
B.1. Pfaffian formulas	272
B.2. Resolutions of height 3 Gorenstein ideals and their squares	276
B.3. Resolutions of annihilating ideals of power sums	280
B.4. Maximum Betti numbers, given T	282
Appendix C. The Gotzmann Theorems and the Hilbert Scheme (Anthony Iarrobino and Steven L. Kleiman)	289
C.1. Order sequences and Macaulay's Theorem on Hilbert functions	290
C.2. Macaulay and Gotzmann polynomials	293
C.3. Gotzmann's Persistence Theorem and m -Regularity	297
C.4. The Hilbert scheme $\mathbf{Hilb}^P(\mathbb{P}^{r-1})$	302
C.5. Gorenstein sequences having a subsequence of maximal growth, and $\mathbf{Hilb}^P(\mathbb{P}^{r-1})$	307
Appendix D. Examples of "Macaulay" Scripts	313
Appendix E. Concordance with the 1996 Version	317
References	319
Index	335
Index of Names	341
Index of Notation	343
