

Contents

1. Introduction	1
1.1 Motivation	1
1.1.1 Counterparty Default Risk	2
1.1.2 Derivatives on Defaultable Assets	6
1.1.3 Credit Derivatives	7
1.2 Objectives	8
1.3 Structure	10
2. Contingent Claim Valuation	13
2.1 Valuation in Discrete Time	14
2.1.1 Definitions	14
2.1.2 The Finite Setting	15
2.1.3 Extensions	18
2.2 Valuation in Continuous Time	18
2.2.1 Definitions	19
2.2.2 Arbitrage Pricing	20
2.2.3 Fundamental Asset Pricing Theorem	25
2.3 Applications in Continuous Time	25
2.3.1 Black-Scholes Model	26
2.3.2 Margrabe's Model	30
2.3.3 Heath-Jarrow-Morton Framework	33
2.3.4 Forward Measure	38
2.4 Applications in Discrete Time	41
2.4.1 Geometric Brownian Motion	41
2.4.2 Heath-Jarrow-Morton Forward Rates	43
2.5 Summary	45
3. Credit Risk Models	47
3.1 Pricing Credit-Risky Bonds	47
3.1.1 Traditional Methods	48
3.1.2 Firm Value Models	48
3.1.2.1 Merton's Model	48
3.1.2.2 Extensions and Applications of Merton's Model	51
3.1.2.3 Bankruptcy Costs and Endogenous Default ..	52

3.1.3	First Passage Time Models	53
3.1.4	Intensity Models	58
3.1.4.1	Jarrow-Turnbull Model	58
3.1.4.2	Jarrow-Lando-Turnbull Model	62
3.1.4.3	Other Intensity Models	65
3.2	Pricing Derivatives with Counterparty Risk	66
3.2.1	Firm Value Models	66
3.2.2	Intensity Models	67
3.2.3	Swaps	68
3.3	Pricing Credit Derivatives	70
3.3.1	Debt Insurance	70
3.3.2	Spread Derivatives	71
3.4	Empirical Evidence	73
3.5	Summary	74
4.	A Firm Value Pricing Model for Derivatives with Counterparty Default Risk	77
4.1	The Credit Risk Model	77
4.2	Deterministic Liabilities	79
4.2.1	Prices for Vulnerable Options	80
4.2.2	Special Cases	82
4.2.2.1	Fixed Recovery Rate	83
4.2.2.2	Deterministic Claims	84
4.3	Stochastic Liabilities	85
4.3.1	Prices of Vulnerable Options	87
4.3.2	Special Cases	88
4.3.2.1	Asset Claims	89
4.3.2.2	Debt Claims	89
4.4	Gaussian Interest Rates and Deterministic Liabilities	90
4.4.1	Forward Measure	91
4.4.2	Prices of Vulnerable Stock Options	93
4.4.3	Prices of Vulnerable Bond Options	95
4.4.4	Special Cases	95
4.5	Gaussian Interest Rates and Stochastic Liabilities	96
4.5.1	Prices of Vulnerable Stock Options	97
4.5.2	Prices of Vulnerable Bond Options	99
4.5.3	Special Cases	99
4.6	Vulnerable Forward Contracts	99
4.7	Numerical Examples	100
4.7.1	Deterministic Interest Rates	100
4.7.2	Stochastic Interest Rates	103
4.7.3	Forward Contracts	110
4.8	Summary	113
4.9	Proofs of Propositions	115
4.9.1	Proof of Proposition 4.2.1	115

4.9.2	Proof of Proposition 4.3.1	120
4.9.3	Proof of Proposition 4.4.1	125
4.9.4	Proof of Proposition 4.5.1	132
5.	A Hybrid Pricing Model for Contingent Claims with Credit Risk	141
5.1	The General Credit Risk Framework	141
5.1.1	Independence and Constant Parameters	143
5.1.2	Price Reduction and Bond Prices	145
5.1.3	Model Specifications	146
5.1.3.1	Arrival Rate of Default	146
5.1.3.2	Recovery Rate	147
5.1.3.3	Bankruptcy Costs	148
5.2	Implementations	149
5.2.1	Lattice with Deterministic Interest Rates	149
5.2.2	The Bankruptcy Process	153
5.2.3	An Extended Lattice Model	155
5.2.3.1	Stochastic Interest Rates	157
5.2.3.2	Recombining Lattice versus Binary Tree	158
5.3	Prices of Vulnerable Options	159
5.4	Recovering Observed Term Structures	160
5.4.1	Recovering the Risk-Free Term Structure	160
5.4.2	Recovering the Defaultable Term Structure	161
5.5	Default-Free Options on Risky Bonds	162
5.5.1	Put-Call Parity	163
5.6	Numerical Examples	164
5.6.1	Deterministic Interest Rates	164
5.6.2	Stochastic Interest Rates	168
5.7	Computational Cost	171
5.8	Summary	173
6.	Pricing Credit Derivatives	175
6.1	Credit Derivative Instruments	176
6.1.1	Credit Derivatives of the First Type	176
6.1.2	Credit Derivatives of the Second Type	178
6.1.3	Other Credit Derivatives	178
6.2	Valuation of Credit Derivatives	178
6.2.1	Payoff Functions	180
6.2.1.1	Credit Forward Contracts	180
6.2.1.2	Credit Spread Options	182
6.3	The Compound Pricing Approach	183
6.3.1	Firm Value Model	183
6.3.2	Stochastic Interest Rates	187
6.3.3	Intensity and Hybrid Credit Risk Models	188
6.4	Numerical Examples	189

6.4.1	Deterministic Interest Rates	189
6.4.2	Stochastic Interest Rates	193
6.5	Pricing Spread Derivatives with a Reduced-Form Model	194
6.6	Credit Derivatives as Exchange Options	198
6.6.1	Process Specifications	198
6.6.2	Price of an Exchange Option	200
6.7	Credit Derivatives with Counterparty Default Risk	205
6.7.1	Price of an Exchange Option with Counterparty De- fault Risk	205
6.8	Summary	215
7.	Conclusion	217
7.1	Summary	218
7.2	Practical Implications	220
7.3	Future Research	220
A.	Useful Tools from Martingale Theory	223
A.1	Probabilistic Foundations	223
A.2	Process Classes	225
A.3	Martingales	225
A.4	Brownian Motion	227
A.5	Stochastic Integration	229
A.6	Change of Measure	233
