<b>1. Introduction</b> .....	1
<b>I. Classical Astronomy and the Solar System</b> .....	5
<b>Humanity and the Stars: Observing and Thinking</b>	
Historical Introduction to Classical Astronomy .....	6
<b>2. Classical Astronomy</b>	
<b>2.1 Spatial Coordinates and Time;     the Motions of the Sun, the Earth, and the Moon</b> .....	10
2.1.1 The Celestial Sphere and Astronomical Coordinate Systems .....	10
2.1.2 The Motions of the Earth. Seasons and the Zodiac .....	12
2.1.3 Time: Days, Years, and the Calendar .....	15
2.1.4 The Moon .....	17
2.1.5 Eclipses of the Sun and the Moon .....	19
<b>2.2 Orbital Motions and Distances in the Solar System</b> .....	20
2.2.1 Planetary Motions and Orbital Elements .....	20
2.2.2 Comets and Meteors .....	23
2.2.3 Distance Determination, the Doppler Effect and Aberration of Light .....	25
<b>2.3 Mechanics and Gravitational Theory</b> .....	27
2.3.1 Newton's Laws of Motion .....	28
2.3.2 The Conservation of Linear Momentum .....	29
2.3.3 Conservation of Angular Momentum: the Area Theorem .....	29
2.3.4 Conservation of Energy .....	30
2.3.5 The Virial Theorem .....	31
2.3.6 The Law of Gravitation. Gravitational Energy .....	31
<b>2.4 Celestial Mechanics</b> .....	33
2.4.1 Kepler's First and Second Laws: Planetary Orbits .....	33
2.4.2 Kepler's Third Law: Determination of Masses .....	34
2.4.3 Conservation of Energy and the Escape Velocity .....	35
2.4.4 Rotation and the Moment of Inertia .....	35
2.4.5 Precession .....	36
2.4.6 The Tides .....	36
2.4.7 The Ptolemaic and the Copernican Worldviews .....	37
<b>2.5 Space Research</b> .....	38
2.5.1 The Orbits of Artificial Satellites and Space Vehicles .....	39
2.5.2 Astronomical Observations from Space .....	40
2.5.3 The Exploration of the Moon .....	42
2.5.4 Space Probe Missions in the Solar System .....	43

<b>3. The Physical Structure of the Objects in the Solar System</b>	<b>3.1 Global Properties of the Planets and Their Satellites</b> .....	46
	3.1.1 Ways of Studying the Planets and Their Satellites .....	46
	3.1.2 The Global Energy Balance of the Planets .....	48
	3.1.3 Interior Structure and Stability .....	48
	3.1.4 The Structures of Planetary Atmospheres .....	50
	<b>3.2 The Earth, the Moon, and the Earthlike Planets</b> .....	51
	3.2.1 The Internal Structures of the Earthlike Planets .....	52
	3.2.2 Radioactive Dating. The Earth's History .....	53
	3.2.3 Magnetic Fields. Plate Tectonics .....	55
	3.2.4 The Lunar Surface .....	57
	3.2.5 The Surfaces of the Earthlike Planets .....	60
	3.2.6 The Atmospheres of the Earthlike Planets .....	66
	<b>3.3 Asteroids or Small Planets (Planetoids)</b> .....	69
	3.3.1 The Orbits of the Asteroids .....	70
	3.3.2 Properties of the Asteroids .....	70
	<b>3.4 The Major Planets</b> .....	72
	3.4.1 Jupiter .....	72
	3.4.2 Saturn .....	77
	3.4.3 Uranus .....	80
	3.4.4 Neptune .....	83
	<b>3.5 Pluto and the Transneptunian Small Planets</b> .....	84
	3.5.1 Pluto and Charon .....	85
	3.5.2 The Transneptunian Small Planets .....	86
	<b>3.6 Comets</b> .....	87
	3.6.1 Structure, Spectra, and Chemical Composition .....	87
	3.6.2 The Evolution of Comets .....	89
	<b>3.7 Meteors and Meteorites</b> .....	89
	3.7.1 Meteorites and Impact Craters .....	89
	3.7.2 Meteors in the Earth's Atmosphere .....	90
	3.7.3 Properties and Origins of Meteorites .....	91
	<b>3.8 Interplanetary Matter</b> .....	94
<b>II. Radiation, Instruments, and Observational Techniques</b> .....		97
<b>The Development of Astronomical Observation Methods</b>		
Historical Introduction to Our Knowledge of the Electromagnetic Spectrum .....		98
<b>4. Radiation and Matter</b>	<b>4.1 Electromagnetic Radiation</b> .....	101
	<b>4.2 The Theory of Special Relativity</b> .....	102
	4.2.1 The Lorentz Transformation. The Doppler Effect .....	103
	4.2.2 Relativistic Mechanics .....	103
	<b>4.3 The Theory of Radiation</b> .....	104
	4.3.1 Phenomenological Description of Radiation .....	104
	4.3.2 Emission and Absorption. The Radiation Transport Equation .....	107
	4.3.3 Thermodynamic Equilibrium and Black-Body Radiation .....	109

	<b>4.4 Matter in Thermodynamic Equilibrium</b> .....	111
	4.4.1 Boltzmann Statistics .....	111
	4.4.2 The Velocity Distribution .....	112
	4.4.3 Thermal Excitation .....	112
	4.4.4 Thermal Ionization .....	112
	4.4.5 The Law of Mass Action .....	113
	<b>4.5 The Interaction of Radiation with Matter</b> .....	114
	4.5.1 Mean Free Paths .....	114
	4.5.2 Interaction Cross Section and Reaction Rate .....	114
	4.5.3 Collision and Radiation Processes: Kinetic Equations .....	115
	4.5.4 Elementary Atomic Processes .....	116
	4.5.5 Extinction and Emission Coefficients .....	119
	4.5.6 Energetic Photons and Particles .....	119
<b>5. Astronomical and Astrophysical Instruments</b>	<b>5.1 Telescopes and Detectors for the Optical and the Ultraviolet Regions</b> .....	123
	5.1.1 Conventional Telescopes .....	123
	5.1.2 Resolving Power and Light Gathering Power. Optical Interferometers .....	128
	5.1.3 Adaptive and Active Optics. Large Telescopes .....	131
	5.1.4 Optical Detectors .....	135
	5.1.5 Spectrographs .....	138
	5.1.6 Space Telescopes .....	141
	<b>5.2 Telescopes and Detectors for Radiofrequencies and the Infrared</b> .....	143
	5.2.1 Radiotelescopes .....	143
	5.2.2 Receivers and Spectrometers for the Radiofrequency Region .....	149
	5.2.3 Observation Methods in the Infrared .....	150
	<b>5.3 Instruments for High-Energy Astronomy</b> .....	152
	5.3.1 Particle Detectors .....	152
	5.3.2 Telescopes for Cosmic Radiation .....	154
	5.3.3 Gamma-ray Telescopes .....	155
	<b>5.4 Instruments for X-rays and the Extreme Ultraviolet</b> .....	157
	5.4.1 Detectors and Spectrometers for the X-ray Region .....	158
	5.4.2 Telescopes and Satellites for the X-ray Region .....	158
	5.4.3 Telescopes for the Extreme Ultraviolet .....	160
<b>III. The Sun and Stars: The Astrophysics of Individual Stars</b> .....		161
<b>Astronomy + Physics = Astrophysics</b>		
Historical Introduction .....		162
<b>6. The Distances and Fundamental Properties of the Stars</b>	<b>6.1 The Sun</b> .....	167
	6.1.1 The Spectrum of the Photosphere. Center–Limb Variation ...	168
	6.1.2 The Energy Distribution .....	169
	6.1.3 Luminosity and Effective Temperature .....	169

	<b>6.2 Distances and Velocities of the Stars</b>	171
	6.2.1 Trigonometric Parallaxes	171
	6.2.2 Radial Velocities and Proper Motions	172
	6.2.3 Stream Parallaxes	172
	6.2.4 Star Positions and Catalogs	173
	<b>6.3 Magnitudes, Colors and Radii of the Stars</b>	174
	6.3.1 Apparent Magnitudes	174
	6.3.2 Color Index and Energy Distribution	175
	6.3.3 Absolute Magnitudes	178
	6.3.4 Bolometric Magnitudes and Luminosities	178
	6.3.5 Stellar Radii	179
	<b>6.4 Classification of the Stellar Spectra.</b>	
	<b>The Hertzsprung–Russell Diagram</b>	180
	6.4.1 The Spectral Type	180
	6.4.2 The Hertzsprung–Russell Diagram. Luminosity Classes	181
	6.4.3 The MK Classification	183
	6.4.4 Two-Color Diagrams	185
	6.4.5 Rotation of the Stars	185
	<b>6.5 Binary Star Systems and the Masses of Stars</b>	186
	6.5.1 Visual Binary Stars	186
	6.5.2 Spectroscopic Binary Stars and Eclipsing Variables	187
	6.5.3 Periods and Rotation in Binary Systems	188
	6.5.4 The Stellar Masses	188
	6.5.5 Close Binary Star Systems	189
	6.5.6 Pulsars in Binary Star Systems	190
	6.5.7 Companions of Substellar Mass:	
	Brown Dwarfs and Exoplanets	192
<b>7. The Spectra and Atmospheres of Stars</b>	<b>7.1 Spectra and Atoms</b>	195
	7.1.1 Basic Concepts of Atomic Spectroscopy	195
	7.1.2 Excitation and Ionization	198
	7.1.3 Line Absorption Coefficients	201
	7.1.4 Broadening of Spectral Lines	202
	7.1.5 Remarks on Molecular Spectroscopy	204
	<b>7.2 The Physics of Stellar Atmospheres</b>	205
	7.2.1 The Structure of Stellar Atmospheres	205
	7.2.2 Absorption Coefficients in Stellar Atmospheres	207
	7.2.3 Model Atmospheres. The Spectral Energy Distribution	209
	7.2.4 Radiation Transport in the Fraunhofer Lines	211
	7.2.5 The Curve of Growth	213
	7.2.6 Quantitative Analysis of Stellar Spectra	215
	7.2.7 Element Abundances in the Sun and in Other Stars	216
	<b>7.3 The Sun: Its Chromosphere and Corona.</b>	
	<b>Flow Fields, Magnetic Fields and Activity</b>	219
	7.3.1 Granulation and Convection	219
	7.3.2 Magnetic Fields and Magnetohydrodynamics	220

	7.3.3	Sunspots and the Activity Cycle. Magnetic Flux Tubes .....	222
	7.3.4	The Chromosphere and the Corona .....	225
	7.3.5	Prominences .....	231
	7.3.6	Solar Eruptions or Flares .....	233
	7.3.7	The Solar Wind .....	236
	7.3.8	Oscillations: Helioseismology .....	240
	<b>7.4</b>	<b>Variable Stars.</b>	
		<b>Flow Fields, Magnetic Fields and Activity of the Stars ....</b>	<b>243</b>
	7.4.1	Pulsating Stars. R Coronae Borealis Stars .....	244
	7.4.2	Magnetic or Spectrum Variables. Ap Stars and Metallic-Line Stars .....	247
	7.4.3	Activity, Chromospheres, and Coronas of Cool Stars .....	248
	7.4.4	Coronas, Stellar Winds and Variability of Hot Stars .....	251
	7.4.5	Cataclysmic Variables: Novae and Dwarf Novae .....	253
	7.4.6	X-ray Binary Systems: Accretion onto Neutron Stars .....	255
	7.4.7	Supernovae and Pulsars .....	259
	7.4.8	Stellar Gamma-ray Sources .....	266
	7.4.9	Gamma Bursters .....	267
<b>8. The Structure and Evolution of Stars</b>	<b>8.1</b>	<b>The Fundamental Equations of Stellar Structure .....</b>	<b>271</b>
	8.1.1	Hydrostatic Equilibrium and the Equation of State of Matter .	271
	8.1.2	Temperature Distribution and Energy Transport .....	272
	8.1.3	Energy Production Through Nuclear Reactions .....	273
	8.1.4	Gravitational Energy and Thermal Energy .....	277
	8.1.5	Stability of the Stars .....	279
	8.1.6	The System of Fundamental Equations and Their General Results .....	279
	<b>8.2</b>	<b>Stellar Evolution .....</b>	<b>281</b>
	8.2.1	Main Sequence Stars: Central Hydrogen Burning .....	281
	8.2.2	The Internal Structure of the Sun. Solar Neutrinos .....	282
	8.2.3	From Hydrogen to Helium Burning .....	285
	8.2.4	Late Phases of Stellar Evolution .....	287
	8.2.5	Nucleosynthesis in Stars .....	291
	8.2.6	Close Binary Star Systems .....	294
	8.2.7	The Physics of Accretion Disks .....	297
	<b>8.3</b>	<b>The Final Stages of Stellar Evolution .....</b>	<b>298</b>
	8.3.1	Brown Dwarfs .....	299
	8.3.2	The Equation of State of Matter with Degenerate Electrons ..	299
	8.3.3	The Structure of the White Dwarfs .....	301
	8.3.4	Neutron Stars .....	301
	<b>8.4</b>	<b>Strong Gravitational Fields .....</b>	<b>303</b>
	8.4.1	The Theory of General Relativity .....	303
	8.4.2	Spherically Symmetric Fields in Vacuum .....	304
	8.4.3	Light Deflection and Gravitational Lenses .....	305
	8.4.4	Black Holes .....	308
	8.4.5	Gravity Waves .....	308

<b>IV. Stellar Systems. Cosmology and Cosmogony</b> .....	311
<b>The Advance into the Universe</b>	
Historical Introduction to the Astronomy of the 20th Century .....	312
<b>9. Star Clusters</b>	
<b>9.1 Open Star Clusters and Stellar Associations</b> .....	318
9.1.1 Open (Galactic) Star Clusters .....	318
9.1.2 Stellar Associations .....	319
9.1.3 Color–Magnitude Diagrams and the Age of Open Clusters ...	319
<b>9.2 Globular Clusters</b> .....	322
9.2.1 Globular Clusters in the Milky Way .....	322
9.2.2 Metal Abundances and Two-Color Diagrams .....	323
9.2.3 Color–Magnitude Diagrams and the Ages of the Globular Clusters .....	324
9.2.4 Globular Clusters in Other Galaxies .....	326
<b>10. Interstellar Matter     and Star Formation</b>	
<b>10.1 Interstellar Dust</b> .....	330
10.1.1 Dark Clouds .....	330
10.1.2 Interstellar Extinction and Reddening .....	330
10.1.3 Polarization of Starlight by Interstellar Dust .....	332
10.1.4 Properties of the Dust Grains .....	332
10.1.5 Diffuse Interstellar Absorption Bands .....	334
<b>10.2 Neutral Interstellar Gas</b> .....	335
10.2.1 Atomic Interstellar Absorption Lines .....	335
10.2.2 The 21 cm Line of Neutral Hydrogen. HI Clouds .....	337
10.2.3 Interstellar Molecular Lines. Molecular Clouds .....	339
<b>10.3 Ionized Gas: Luminous Gaseous Nebulae</b> .....	341
10.3.1 H II Regions .....	342
10.3.2 Planetary Nebulae .....	346
10.3.3 Supernova Remnants .....	347
10.3.4 Hot Interstellar Gas .....	354
<b>10.4 High-Energy Components</b> .....	354
10.4.1 Interstellar Magnetic Fields .....	355
10.4.2 Cosmic Radiation .....	355
10.4.3 Galactic Gamma Radiation .....	360
<b>10.5 Early Evolution and Formation of the Stars</b> .....	363
10.5.1 Pre-Main-Sequence Stars .....	364
10.5.2 Regions of Star Formation .....	366
10.5.3 Gravitational Instability and Fragmentation .....	368
10.5.4 The Evolution of Protostars .....	369
10.5.5 Matter Flows in the Vicinity of Protostars .....	371
10.5.6 Stellar Statistics and the Star Formation Rate .....	373
<b>11. The Structure     and Dynamics     of the Milky Way Galaxy</b>	
<b>11.1 Stars and the Structure of the Milky Way</b> .....	377
11.1.1 Galactic Coordinates .....	377
11.1.2 Star Gauging .....	377

11.1.3	Spatial Velocities of the Stars .....	378
11.1.4	Star Clusters: Distance Determinations and the Structure of the Milky Way .....	380
<b>11.2</b>	<b>The Dynamics and Distribution of Matter</b> .....	381
11.2.1	The Rotation of the Galactic Disk .....	382
11.2.2	The Distribution of the Interstellar Matter .....	383
11.2.3	The Galactic Orbits of the Stars. Local Mass Density .....	387
11.2.4	The Mass Distribution in the Milky Way Galaxy .....	389
11.2.5	The Dynamics of the Spiral Arms .....	390
11.2.6	Stellar Populations and Element Abundances .....	392
<b>11.3</b>	<b>The Central Region of the Milky Way</b> .....	395
11.3.1	The Galactic Bulge ( $R \leq 3$ kpc) .....	395
11.3.2	The Nuclear Region of the Galactic Bulge ( $R \leq 300$ pc) .....	396
11.3.3	The Circumnuclear Disk and the Minispiral ( $R \leq 10$ pc) .....	398
11.3.4	The Innermost Region ( $R \leq 1$ pc) and Sgr A* .....	399
<b>12. Galaxies and Clusters of Galaxies</b>	<b>12.1 Normal Galaxies</b> .....	402
12.1.1	Distance Determination .....	402
12.1.2	Classification and Absolute Magnitudes .....	405
12.1.3	The Luminosity Function .....	409
12.1.4	Brightness Profiles and Diameters .....	410
12.1.5	Dynamics and Masses .....	411
12.1.6	Stellar Populations and Element Abundances .....	415
12.1.7	The Distribution of Gas and Dust .....	418
<b>12.2</b>	<b>Infrared and Starburst Galaxies</b> .....	422
12.2.1	Infrared Galaxies .....	423
12.2.2	Starburst Activity .....	424
<b>12.3</b>	<b>Radio Galaxies, Quasars, and Activity in Galactic Nuclei</b> .....	425
12.3.1	Synchrotron Radiation .....	425
12.3.2	The Non-thermal Radiofrequency Emissions of Normal Galaxies .....	428
12.3.3	Radio Galaxies .....	429
12.3.4	Quasars (Quasistellar Objects) .....	434
12.3.5	Seyfert Galaxies .....	441
12.3.6	Activity in Galactic Nuclei .....	443
<b>12.4</b>	<b>Clusters and Superclusters of Galaxies</b> .....	446
12.4.1	The Local Group .....	447
12.4.2	The Classification and the Masses of the Galaxy Clusters .....	448
12.4.3	The Gas in Galaxy Clusters .....	450
12.4.4	Interacting Galaxies. The Evolution of Galaxy Clusters .....	452
12.4.5	Superclusters of Galaxies .....	452
<b>12.5</b>	<b>The Formation and Evolution of the Galaxies</b> .....	455
12.5.1	The Formation of the Galaxies and the Clusters of Galaxies ..	455
12.5.2	The Intergalactic Medium and Lyman $\alpha$ Systems .....	458

	12.5.3 Interacting Galaxies .....	460
	12.5.4 Evolution of the Galaxies .....	461
	12.5.5 Galaxies in the Early Universe .....	466
<b>13. Cosmology: the Cosmos as a Whole</b>	<b>13.1 Models of the Universe</b> .....	468
	13.1.1 The Expanding Universe .....	468
	13.1.2 Newtonian Cosmology .....	469
	13.1.3 Relativistic Cosmology .....	471
	13.1.4 The Matter Cosmos .....	474
	<b>13.2 Radiation and Observations. Element Synthesis in the Universe</b> .....	475
	13.2.1 The Propagation of Radiation .....	475
	13.2.2 The Microwave Background Radiation .....	477
	13.2.3 The Radiation Cosmos .....	479
	13.2.4 Element Synthesis in the Universe .....	481
	13.2.5 Observed Parameters of the Present-Day Universe .....	482
	13.2.6 Olbers' Paradox .....	485
	<b>13.3 The Evolution of the Universe</b> .....	486
	13.3.1 The Planck Time .....	486
	13.3.2 Elementary Particles and Fundamental Interactions .....	487
	13.3.3 Cosmic Evolution According to the Standard Model .....	489
	13.3.4 The Inflationary Universe .....	491
	13.3.5 Other Cosmologies .....	492
<b>14. The Cosmogony of the Solar System</b>	<b>14.1 The Formation of the Sun and of the Solar System</b> .....	494
	14.1.1 A Survey of the Solar System .....	494
	14.1.2 The Protoplanetary Disk and the Formation of the Planets ...	496
	14.1.3 The Origin of the Meteorites .....	498
	14.1.4 The Formation of the Earth–Moon System .....	500
	14.1.5 Planetary Systems Around Other Stars .....	503
	<b>14.2 The Evolution of the Earth and of Life</b> .....	505
	14.2.1 The Development of the Atmosphere and of the Oceans .....	505
	14.2.2 Fundamentals of Molecular Biology .....	506
	14.2.3 Prebiotic Molecules .....	509
	14.2.4 The Development of Lifeforms .....	510
<b>Appendix</b>	<b>A.1 Units: the International and the Gaussian Unit Systems</b> .....	517
	<b>A.2 Names of the Constellations</b> .....	521
<b>Selected Exercises</b> .....		523
<b>Literature and Sources of Data</b> .....		531
<b>Acknowledgements</b> .....		537
