1.12.15 Adaptive Optics .......................................... 89

1.13 Elasticity Theory .............................................. 91
1.13.1 Historical Introduction .................................... 91
1.13.2 Elasticity Constants of Isotropic Materials ............... 101
1.13.3 Displacement Vector and Strain Tensor .................... 104
1.13.4 The Stress-Strain Linear Relations and Strain Energy ... 105
1.13.5 Uniform Torsion of a Rod and Strain Components ... 107
1.13.6 Love-Kirchhoff Hypotheses and Thin Plate Theory ...... 110
1.13.7 Bending of Thin Plates and Developable Surfaces ...... 111
1.13.8 Bending of Thin Plates and Non-developable Surfaces .. 116
1.13.9 Bending of Rectangular Plates of Constant Thickness ... 121
1.13.10 Axisymmetric Bending of Circular Plates of Constant Thickness ........................................ 123
1.13.11 Circular Plates and Axisymmetric Loading Manifolds ... 124
1.13.12 Deformation of a Plate in a Gravity Field ............... 126
1.13.13 Saint-Venant’s Principle .................................. 126
1.13.14 Computational Modeling and Finite Element Analysis . . 127

1.14 Active Optics ................................................. 128
1.14.1 Spherical Polishing ......................................... 128
1.14.2 Optical Surfaces Free from Ripple Errors .................. 129
### Contents

1.14.3 Active Optics and Time-Dependence Control  
1.14.4 Various Aspects of Active Optics  
References  

2 Dioptrics and Elasticity – Variable Curvature Mirrors (VCMs)  
2.1 Thin Circular Plates and Small Deformation Theory  
2.1.1 Plates of Constant Thickness Distribution – CTD  
2.1.2 Plates of Variable Thickness Distribution – VTD –  
Cycloid-Like form – Tulip-Like Form  
2.1.3 Optical Focal-Ratio Variation  
2.1.4 Buckling Instability  
2.2 Thin Plates and Large Deformation Theory – VTD  
2.3 The Mersenne Afocal Two-Mirror Telescopes  
2.4 Beam Compressors, Expanders and Cat’s Eyes – Active Optics  
Pupil Transfers  
2.5 VCMs as Field Compensators of Interferometers  
2.5.1 Fourier Transform Spectrometers  
2.5.2 Stellar Interferometers and Telescope Arrays  
2.6 Construction of VCMs with VTDs  
2.6.1 Elastic Deformability and Choice of Material Substrate  
2.6.2 Zoom Range and Choice of a Thickness Distribution  
2.6.3 Achievement of Boundary Conditions  
2.6.4 Design and Results with VTD Type 1 – Cycloid-Like Form  
2.6.5 Design and Results with a VTD Type 2 – Tulip-Like Form  
2.7 Plasticity and Hysteresis  
2.7.1 Stress-Strain Linearization and Plasticity Compensation  
2.7.2 Hysteresis Compensation and Curvature Control  
References  

3 Active Optics and Correction of Third-Order Aberrations  
3.1 Elasticity Theory with Constant Thickness Distributions – CTD  
Class  
3.2 Elasticity Theory with Variable Thickness Distributions – VTD  
Class  
3.3 Active Optics and Third-Order Spherical Aberration  
3.3.1 Configurations in the CTD Class \( A_1 = A_2 = 0 \)  
3.3.2 Configurations in the VTD Class  
3.3.3 Hybrid Configurations  
3.3.4 Balance with a Curvature Mode  
3.3.5 Examples of Application  
3.4 Active Optics and Third-Order Coma  
3.4.1 Configuration in the CTD Class \( A_1 = 0 \)  
3.4.2 Configuration in the VTD Class  
3.4.3 Hybrid Configurations  
3.4.4 Balance with a Tilt Mode
3.4.5 Coma from a Pupil and Concave Mirror System .......... 194
3.4.6 Examples of Active Optics Coma Correction .......... 195
3.5 Active Optics and Third-Order Astigmatism ............... 198
  3.5.1 Configuration in the CTD Class \( (A_2 = 0) \) ........... 199
  3.5.2 Configuration in the VTD Class ................... 200
  3.5.3 Hybrid Configurations ................................ 201
  3.5.4 Balance with a Curvature Mode and Cylindric
       Deformations ....................................... 201
  3.5.5 Sagittal and Tangential Ray Fans in Mirror Imaging ...... 202
  3.5.6 Aspherization of Concave Mirrors – Examples .......... 206
  3.5.7 Concave Diffraction Gratings and Saddle Correction .. 209
  3.5.8 Aspherization of Single Surface Spectrographs – Example 212
  3.5.9 Higher-Order Aspherizations of Single Surface
       Spectrographs ....................................... 213
References ........................................................... 214

4 Optical Design with the Schmidt Concept – Telescopes and
Spectrographs ........................................................... 217
  4.1 The Schmidt Concept ......................................... 217
    4.1.1 The Class of Two-Mirror Anastigmatic Telescopes .... 217
    4.1.2 Wavefront Analysis at the Center of Curvature
           of a Spherical Mirror ............................ 222
    4.1.3 Wavefront Equation Including the Magnification Ratio \( M \) 225
    4.1.4 Optical Design of Correctors – Preliminary Remarks .... 225
    4.1.5 Object at Infinity – Null Power Zone Positioning ....... 226
    4.1.6 Optical Equation of Various Corrective Elements ....... 227
    4.1.7 Under or Over Correction Factor \( s \) .................. 228
  4.2 Refractive Corrector Telescopes ............................. 229
    4.2.1 Off-axis Aberrations and Chromatism of a Singlet
           Corrector ........................................ 229
    4.2.2 Achromatic Doublet-Plate Corrector ................... 232
    4.2.3 Singlet Corrector in Blue and Additional Monocentric
           Filters in Red .................................... 233
  4.3 All-Reflective Telescopes .................................... 234
    4.3.1 Centered Optical Systems used Off-axis ................ 235
    4.3.2 Non-Centered Optical Systems ....................... 237
    4.3.3 Gain of Non-Centered Systems Over Centered Designs .. 239
    4.3.4 LAMOST: A Giant Non-Centered Schmidt
           with Active Optics ............................... 240
  4.4 All-Reflective Spectrographs with Aspherical Gratings .... 242
    4.4.1 Comparison of Reflective Grating Spectrograph Designs . 242
    4.4.2 Diffraction Grating Equation ........................ 243
    4.4.3 Axisymmetric Gratings \( (\beta_0 = 0) \) .................. 244
    4.4.4 Bi-Axial Symmetric Gratings \( (\beta_0 \neq 0) \) .......... 245
    4.4.5 Flat Fielding of All-Reflective Aspherized
           Grating Spectrographs ............................. 246
5 Schmidt Correctors and Diffraction Gratings Aspherized by Active Optics .................................................. 263

5.1 Various Types of Aspherical Schmidt Correctors ................. 263

5.2 Refractive Correctors ........................................... 263

5.2.1 Third-Order Optical Profile of Refractive Correctors .......... 263

5.2.2 Elasticity and Circular Constant Thickness Plates ............ 264

5.2.3 Refractive Correctors and the Spherical Figuring Method . 265

5.2.4 Refractive Correctors and the Plane Figuring Method . . . . . 268

5.2.5 Glass Rupture and Loading Time Dependence ............... 273

5.3 Reflective Correctors ............................................ 276

5.3.1 Optical Figure of the Primary Mirror ......................... 276

5.3.2 Axisymmetric Circular Primaries with \( k = 3/2 \) – Vase Form ................................................................. 277

5.3.3 Bisymmetric Circular Primaries with \( k = 3/2 \) – MDM . . . 279

5.3.4 Bisymmetric Circular Primaries with \( k = 0 \) – Tulip Form . 279

5.3.5 Bisymmetric Elliptical Primary Mirror with \( k = 3/2 \) – Vase Form – Biplate Form .............................. 282

5.3.6 LAMOST: A Segmented Bisymmetric Elliptical Primary . 293

5.4 Aspherized Reflective Diffraction Gratings ........................ 293

5.4.1 Active Optics Replication for Grating Aspherization .......... 293

5.4.2 Optical Profile of Aspherical Reflective Gratings .......... 294

5.4.3 Axisymmetric Gratings with \( k = 3/2 \) and Circular Built-in Submasters .................................................. 296

5.4.4 Axisymmetric Gratings with \( k = 0 \) and Circular Simply Supported Submasters .......................... 302

5.4.5 Bisymmetric Gratings with \( k = 3/2 \) and Elliptic Built-in Submasters .................................................. 304

5.4.6 Constructional Replication Condition for Active Optics Process .................................................. 309

References ..................................................................... 310

6 Theory of Shells and Aspherization of Axisymmetric Mirrors –

Meniscus, Vase and Closed Forms .................................. 313

6.1 Active Optics Aspherization of Fast f-Ratio Mirrors ............. 313

6.2 Theory of Shallow Spherical Shells ............................... 313
Contents

7.7 Vase MDMs for Liquid Mirror Telescopes ........................................... 390
  7.7.1 Zenithal Observations with LMTs ................................................. 390
  7.7.2 Field Distortions and Four-Lens Correctors for LMTs .................. 391
  7.7.3 LMT Concepts with MDMs for Off-Zenith Observations ............... 392
7.8 MDMs as Recording Compensators for Holographic Gratings .......... 395
  7.8.1 Holographic Gratings Correcting Aberrations ............................. 395
  7.8.2 Design Example for the COS Gratings of HST–Recording Parameters ................................................. 396
  7.8.3 Elasticity Design of a Six-Arm MDM as Recording Compensator .......... 398
7.9 Degenerated Configurations and Triangle Mode ............................. 402
  7.9.1 Special Geometry for the Triangle Mode ....................................... 402
  7.9.2 Single Tri 3 Mode and Degenerated Meniscus Form .................... 402
  7.9.3 Single Tri 3 Mode and Degenerated Vase Form ............................ 403
7.10 Single Mode and Deformable Outer Ring ...................................... 404
  7.10.1 Outer Ring Designs for High Accuracy Correction ..................... 404
  7.10.2 Ring with Axial Thickness Variation ....................................... 404
  7.10.3 Ring with Forces Acting on Angular Bridges ............................. 404
7.11 Future Giant Telescopes and Segment Aspherization ..................... 405
  7.11.1 Current Trends in Giant Telescope Concepts ........................... 405
  7.11.2 Active Optics Aspherization of Mirror Segments .................... 406
7.12 Vase Form and Middle Surface ..................................................... 407
7.13 Vase Form and Saint-Venant’s Principle ........................................ 408
References .......................................................................................... 408

8 Own Weight Flexure and Figure Control of Telescope Mirrors ............. 413
  8.1 Primary Mirror Support Systems Against Gravity ......................... 413
    8.1.1 Introduction .............................................................................. 413
    8.1.2 Axial and Lateral Support System Concepts ................................ 413
    8.1.3 Some Examples of Primary Mirror Geometries .......................... 415
  8.2 Density and Thermal Constants of Mirror Substrates ..................... 416
  8.3 Substrates for Large Mirrors ............................................................. 418
  8.4 Stiffness and Elastic Deformability Criteria .................................. 421
