## Contents

### Part I  Soil – Its Nature and Origin  

1  The Origin of Soil  
1.1 Physical or Mechanical Weathering  
1.2 Chemical Weathering – The Gate to Pedogenesis  
1.3 Weathering by Biological Agents  
1.3.1 The Pedogenic Cycle – A Cycle within the  
    Global Sedimentary Cycle  
1.3.2 Transport Routes and Material Transfer within the Soil Body  
1.4 Factors Controlling Soil Formation  
1.5 Morphology of Soil  

2  Soil Constituents  
2.1 The Mineral Solid Phase  
2.1.1 The Orthosilicates  
2.1.2 Chain Silicates or Inosilicates  
2.1.3 Sheet Silicates or Phyllosilicates  
2.1.4 Framework Silicates or Tectosilicates  
2.2 Organic Matter and Soil Organisms  
2.2.1 Soil Organisms  
2.2.2 Dead Organic Matter  
2.3 The Liquid Phase – Soil Water  
2.3.1 Composition of Soil Waters  
2.4 The Gaseous Phase – Soil Air, Origin, Composition and Properties  

3  Soil Properties  
3.1 Physical Properties  
3.1.1 Colour  
3.1.2 Texture  
3.1.3 Structure  
3.1.4 Consistence  
3.1.5 Porosity  
3.2 Chemical Properties  
3.2.1 Soil Acidity (pH)  
3.2.2 Ion Exchange

XII Contents

3.2.3 Cation Exchange Capacity (CEC) ........................................... 52
3.2.4 The Interaction of Organic Soil Matter with Mineral Components ........................................... 53
3.2.5 Oxidation-Reduction Status ........................................... 55

4 Soil Types and Classification ........................................... 57
4.1 The Soil Taxonomy System – Criteria of Classification ........................................... 57
   4.1.1 Morphological Criteria of Classification in the Soil Taxonomy System (Diagnostic Horizons) ........................................... 57
   4.1.2 Description of the Environmental Criteria of Classification ........................................... 60
   4.1.3 Description of the Chemical Criteria of Classification ........................................... 62
   4.1.4 Categories of the Taxonomy System Based on the Criteria of Classification ........................................... 63
   4.1.5 The Soil Orders of Taxonomy ........................................... 63
4.2 The FAO-UNESCO Soil Classification System ........................................... 88
   4.2.1 Description of the Reference Soil Groups of the World Reference Base for Soil Resources (WRB) ........................................... 88
   4.2.2 Relation Between the WRB System and the USDA Taxonomy System ........................................... 92
4.3 Other Systems of Classification ........................................... 92
   Examples of National Systems ........................................... 93

5 Soil Degradation ........................................... 95
5.1 Soil Degradation and Soil Quality ........................................... 95
   5.1.1 Biological Indicators of Soil Quality – Soil Respiration Rates ........................................... 95
   5.1.2 Physical Indicators of Soil Quality ........................................... 96
   5.1.3 Chemical Indicators of Soil Quality ........................................... 98
5.2 Physical Soil Degradation ........................................... 100
   5.2.1 Soil Erosion ........................................... 100
   5.2.2 Soil Compaction ........................................... 105
   5.2.3 Soil Crusting and Sealing ........................................... 108
5.3 Chemical Soil Degradation ........................................... 110
   5.3.1 Acidification ........................................... 110
   5.3.2 Salinization and Sodification ........................................... 112

Part II Soil Pollution ........................................... 115

6 Major Types of Soil Pollutants ........................................... 117
6.1 Heavy Metals and Their Salts ........................................... 117
   6.1.1 Heavy Metals and the Soil System ........................................... 121
   6.1.2 Transport of Heavy Metals within the Soil System ........................................... 121
   6.1.3 Bioavailability of Heavy Metals ........................................... 122
   6.1.4 Biochemical Effects of Heavy Metals ........................................... 123
   6.1.5 Major Environmental Accidents Involving Pollution by Heavy Metals ........................................... 124
6.2 Other Inorganic Pollutants .................................................. 127
6.3 Radionuclides ................................................................. 128
  6.3.1 Speciation and Behaviour of Radionuclides in the Soil System .. 129
  6.3.2 Uptake of Radionuclides by Plants ................................ 131
6.4 Nuclear Debris from Weapon Tests and Belligerent Activities ....... 131
6.5 Nuclear Debris from Major Nuclear Accidents ......................... 133

7 Sources of Soil Pollution ...................................................... 137
  7.1 Pollutants of Agrochemical Sources ..................................... 137
    7.1.1 Insecticides ....................................................... 139
    7.1.2 Herbicides ....................................................... 144
    7.1.3 Fungicides ....................................................... 146
    7.1.4 Fuel Spills in Farms ............................................. 147
  7.2 Soil Pollutants of Urban Sources ....................................... 147
    7.2.1 Power Generation Emissions .................................... 148
    7.2.2 Soil Pollution through Transport Activities .................... 148
    7.2.3 Soil Pollution by Waste and Sewage Sludge ..................... 151
  7.3 Soil Pollution through Chemical Warfare ................................ 153
    7.3.1 Pollutants, Toxic Chemicals, and Chemical Weapons .......... 155
    7.3.2 Soil Pollution by Military Activities During the Cold War .... 162
  7.4 Soil Pollution through Biological Warfare (BW) ....................... 165
    7.4.1 Bacteria ......................................................... 166
    7.4.2 Viruses .......................................................... 168
    7.4.3 Rickettsiae ...................................................... 171
    7.4.4 Chlamydia ....................................................... 171
    7.4.5 Fungi ............................................................ 172
    7.4.6 Toxins .......................................................... 172

8 Pollution Mechanisms and Soil-Pollutants Interaction .................... 175
  8.1 Physical Processes and Mechanisms of Pollution ....................... 175
    8.1.1 Adsorptive Retention .......................................... 177
    8.1.2 Nonadsorptive Retention ...................................... 187
  8.2 Contaminants Transport ................................................ 189
    8.2.1 Microscopic Dispersion: Molecular Diffusion .................. 190
    8.2.2 Macroscopic Dispersion ....................................... 192
  8.3 Behaviour of Non-Aqueous Phase Liquids (NAPLs) in Soils ............ 194
    8.3.1 NAPLs Lighter than Water (LNAPLs) .......................... 195
    8.3.2 NAPLs Denser than Water (DNAPLs) ......................... 196

9 Pollutants’ Alteration, Transformation, and Initiation of Chemical Changes within the Soil ................................................... 199
  9.1 Processes Related to Chemical Mobility ................................ 199
    9.1.1 Immiscible Phase Separation .................................. 199
    9.1.2 Acid-Base Equilibrium ......................................... 200
    9.1.3 Dissolution-Precipitation Reactions ............................ 202
9.2 Chemical Transformation Processes ........................................... 202
  9.2.1 Hydrolysis ................................................................. 206
9.3 Biodegradation and Biologically Supported Transformations .......... 206
9.4 Enzymatic Transformations:
  A Primer on Enzymes, Their Types and Mode of Action ................. 207
  9.4.1 The Hydrolases ......................................................... 209
  9.4.2 The Transferases ...................................................... 211
  9.4.3 The Oxidoreductases .................................................. 216
  9.4.4 The Lyases ............................................................... 218
  9.4.5 The Ligases ............................................................... 218
9.5 Transformations Assisted by Bacterial Action ........................... 219
  9.5.1 Sulphur Bacteria ......................................................... 220
  9.5.2 Nitrifying Bacteria ..................................................... 221
  9.5.3 Iron Oxidising Bacteria ............................................... 222
  9.5.4 Methane Oxidising Bacteria .......................................... 222
  9.5.5 Hydrogen Bacteria ...................................................... 222

Part III Monitoring of Soil Pollution ............................................ 223

10 Monitoring and Monitoring Plans ............................................. 225
  10.1 Site Characterisation ..................................................... 226
  10.2 Data Acquisition .......................................................... 227
    10.2.1 Sampling-Planning and Realisation ................................ 228
    10.2.2 Sampling Procedures ................................................. 229
  10.3 Field and Laboratory Investigations .................................... 234
    10.3.1 Investigation of Solid Matter ....................................... 234
    10.3.2 Investigation of Soil Solution ....................................... 235
  10.4 Monitoring of Groundwater Flows ...................................... 237
    10.4.1 The Different Zones of Groundwater ............................... 237
    10.4.2 Monitoring Flow Directions ......................................... 238
    10.4.3 Monitoring Hydraulic Heads ........................................ 239
    10.4.4 Measuring Hydraulic Heads in the Vadose Zone .................. 240

11 Biological Monitoring ............................................................ 241
  11.1 Planning and Implementation of Biological Monitoring ............... 242
  11.2 Foliage Sampling and Investigation ..................................... 243
  11.3 Chemical Investigation of Foliage ..................................... 243
  11.4 Sampling and Investigation of Litterfall ................................ 243

Part IV Modelling of Soil Pollution .............................................. 245

12 Models and Their Construction ............................................... 247
  12.1 Types of Models ......................................................... 248
    12.1.1 Space Analogue Models ............................................. 248
    12.1.2 Mathematical Modelling of Fluid Flows in Soil .................. 252
Part V  Soil Remediation ................................................................. 263

13  Planning and Realisation of Soil Remediation ................................ 265
13.1 Categories of Pollutants ............................................................ 265
13.2 Scale of Pollution ................................................................. 266
13.3 Risk Level ............................................................................. 267
13.4 Remediation Technologies ...................................................... 267
   13.4.1 Chemical and Physical Remedial Techniques ...................... 269
   13.4.2 Biological Treatment (Bioremediation) .............................. 273
   13.4.3 Solidification/Stabilisation Methods ................................. 279
   13.4.4 Thermal Treatment .......................................................... 280
