Introduction	1
---------------------------	---

Part I Thermodynamics of Ensembles of Classical Particles

1 Excitations in Simple Atomic Ensembles	7
1.1 Thermodynamics and Dynamics of Particle Ensembles	7
1.2 Interaction of Inert Gas Atoms	9
1.3 Similarity Law for Simple Atomic Ensembles	13
1.4 Evolution of Particle Ensembles	13
1.5 Voids as Elementary Configurational Excitations	17
2 Structures of Ensembles of Interacting Particles	21
2.1 Close-Packed Structures	21
2.2 Shells in Close-Packed Structures	24
2.3 Lennard-Jones Crystal	27
2.4 Morse Crystal	29
2.5 Surface Energy of Lennard-Jones and Morse Crystals	30
2.6 Solid and Liquid Inert Gases Near the Triple Point	33
3 Thermodynamics of Dense Gases and Liquids	39
3.1 Equation of State for an Ensemble of Randomly Distributed Particles	39
3.2 Equilibrium of Gas and Condensed States	42
3.3 Liquid Surface Parameters	45
3.4 Peculiarities of Similarity for Inert Gases	47
3.5 Scaling Law for Molecular Systems	48
4 Clusters with Short-Range Interaction	51
4.1 Configurations of Solid Clusters with Pairwise Atomic Interactions	51

4.2	Peculiarities of Close-Packed Clusters with Short-Range Interaction	53
4.3	Constructing fcc-Clusters with Short-Range Interaction	54
4.4	Growth of fcc Clusters with Short-Range Atomic Interaction	56
4.5	Regular Clusters of Close-Packed Structures	59
4.6	Icosahedral Clusters	64
4.7	Competition of Icosahedral and Close-Packed Structures.....	67
5	Ensembles of Classical Particles with Repulsion.....	75
5.1	Thermodynamics of Ensembles of Repelling Particles	75
5.2	A System of Hard Spheres	77
5.3	Colloid Suspensions as Systems of Repelling Particles	80
5.4	Virial Theorem and Instability of Crystal Structure	82
5.5	Phase Transition for an Ensemble of Repelling Atoms	88
5.6	Phase Transitions in Inert Gases under High Pressure	90
5.7	Structures of an Ensemble of Repelling Particles at Low Temperatures	94
<hr/>		
Part II Configurational Excitations and Aggregate States of Ensembles of Classical Particles		
<hr/>		
6	Configurational Excitation and Voids in Ensembles of Bound Classical Atoms.....	99
6.1	Separation of Thermal and Configurational Degrees of Freedom of Clusters	99
6.2	Lattice Model for the Order–Disorder Phase Transition.....	100
6.3	Chemical Equilibria and Phase Transitions	102
6.4	Internal Voids in a System of Identical Particles	105
6.5	Void Formation in Two Dimensions	109
6.6	The Cell Model for Disk Particles	113
6.7	Peculiarities of Configurational Excitation for Bulk Atomic Systems	115
6.8	Two-State Approximation for Aggregate States.....	117
7	Configurational Cluster Excitation with Pairwise Interactions	121
7.1	Peculiarities of Configurational Excitation of Clusters	121
7.2	Structural Phase Transition in a Solid Cluster.....	127
7.3	Configurational Excitation of the Icosahedral Cluster of 13 Atoms	131
7.4	The Cluster as a Microcanonical Ensemble of Bound Atoms ..	134
7.5	The Cluster as a Canonical Ensemble of Bound Atoms	137

7.6 Configurational Excitation of the Icosahedral Cluster
of 55 Atoms 140

7.7 Character of Configuration Transitions in Clusters 146

8 Phase Transitions in Macroscopic Systems of Atoms 149

8.1 Configurational Excitation of a Solid 149

8.2 Modified Lattice Model for Configurational Excitation 151

8.3 Parameters of Voids for Liquid Inert Gases 153

8.4 Voids in a Macroscopic System of Bound Atoms 157

8.5 Criterion of Existence of the Liquid State 157

8.6 Freezing Points for Bulk Inert Gases 160

8.7 General Liquid Properties 161

9 Melting of Clusters and Bulk Atomic Ensembles 163

9.1 Entanglement of Thermal and Configurational Excitations
in Clusters 163

9.2 Parameters of Melting 165

9.3 Contradiction Between the Melting Criterion
and Its Nature 170

9.4 Definition of the Cluster Aggregate State 171

9.5 Voids as Gateways to Fluidity 173

9.6 Liquid-Gas Interface 175

**Part III Dynamics of Configurational Excitations in Ensembles
of Classical Particles**

10 Coexistence of Cluster Phases 179

10.1 Hierarchy of Equilibrium Times in Clusters 179

10.2 Character of Phase Coexistence in Clusters: Surface Melting .. 181

10.3 Two-Temperature Regime for Cluster Equilibrium 185

10.4 Entropy of an Isolated Cluster in the Two-State Approach ... 187

10.5 Temperatures of an Isolated Cluster Near the Melting Point .. 189

10.6 Cluster Heat Capacity Near the Phase Transition 192

11 Glassy States of an Ensemble of Bound Atoms 199

11.1 Glassy State from the Void Standpoint 199

11.2 Diffusion of Voids in a Bulk Ensemble of Atoms 200

11.3 Cell Model for Vacancy Diffusion Coefficients 202

11.4 Kinetics of Transitions Between Aggregate States 204

11.5 Formation of a Glassy State 206

11.6 Saturated Vapor Pressure Over a Surface in a Glassy State .. 207

11.7 Glassy State for an Ensemble of Repelling Particles 211

11.8 More Peculiarities of Glassy States
for Simple Atomic Systems 213

12	Transport of Voids in Nucleation Processes	217
12.1	Peculiarities of Nucleation Processes	217
12.2	Transport of Voids in a Nonuniform Bulk Atomic System	219
12.3	Growth of a Solid Cluster Inside a Liquid as Transport of Voids	222
12.4	Wave Mechanism of the Phase Transition	225
13	Conclusion and Summary	231
	References	233
	Index	243
