Part I Elements of Analysis of Stratified Groups

1	Stratified Groups and Sub-Laplacians	3
1.1	Vector Fields in \mathbb{R}^N : Exponential Maps and Lie Algebras	3
1.1.1	Vector Fields in \mathbb{R}^N	3
1.1.2	Integral Curves	6
1.1.3	Exponentials of Vector Fields	8
1.1.4	Lie Brackets of Vector Fields in \mathbb{R}^N	10
1.2	Lie Groups on \mathbb{R}^N	13
1.2.1	The Lie Algebra of a Lie Group on \mathbb{R}^N	13
1.2.2	The Jacobian Basis	19
1.2.3	The (Jacobian) Total Gradient	22
1.2.4	The Exponential Map of a Lie Group on \mathbb{R}^N	23
1.3	Homogeneous Lie Groups on \mathbb{R}^N	31
1.3.1	δ_λ -homogeneous Functions and Differential Operators	32
1.3.2	The Composition Law of a Homogeneous Lie Group	38
1.3.3	The Lie Algebra of a Homogeneous Lie Group on \mathbb{R}^N	44
1.3.4	The Exponential Map of a Homogeneous Lie Group	48
1.4	Homogeneous Carnot Groups	56
1.5	The Sub-Laplacians on a Homogeneous Carnot Group	62
1.5.1	The Horizontal \mathcal{L} -gradient	68
1.6	Exercises of Chapter 1	73
2	Abstract Lie Groups and Carnot Groups	87
2.1	Abstract Lie Groups	87
2.1.1	Differentiable Manifolds	87
2.1.2	Tangent Vectors	91
2.1.3	Differentials	95
2.1.4	Vector Fields	97
2.1.5	Commutators. φ -relatedness	102
2.1.6	Abstract Lie Groups	106

2.1.7	Left Invariant Vector Fields and the Lie Algebra	107
2.1.8	Homomorphisms	112
2.1.9	The Exponential Map	116
2.2	Carnot Groups	121
2.2.1	Some Properties of the Stratification of a Carnot Group	125
2.2.2	Some General Results on Nilpotent Lie Groups	128
2.2.3	Abstract and Homogeneous Carnot Groups	130
2.2.4	More Properties of the Lie Algebra	138
2.2.5	Sub-Laplacians of a Stratified Group	144
2.3	Exercises of Chapter 2	147
3	Carnot Groups of Step Two	155
3.1	The Heisenberg–Weyl Group	155
3.2	Homogeneous Carnot Groups of Step Two	158
3.3	Free Step-two Homogeneous Groups	163
3.4	Change of Basis	165
3.5	The Exponential Map of a Step-two Homogeneous Group	166
3.6	Prototype Groups of Heisenberg Type	169
3.7	H-groups (in the Sense of Métivier)	173
3.8	Exercises of Chapter 3	177
4	Examples of Carnot Groups	183
4.1	A Primer of Examples of Carnot Groups	183
4.1.1	Euclidean Group	183
4.1.2	Carnot Groups with Homogeneous Dimension $Q \leq 3$	184
4.1.3	B-groups	184
4.1.4	K-type Groups	186
4.1.5	Sum of Carnot Groups	190
4.2	From a Set of Vector Fields to a Stratified Group	191
4.3	Further Examples	198
4.3.1	The Vector Fields $\partial_1, \partial_2 + x_1\partial_3$	198
4.3.2	Classical and Kohn Laplacians	200
4.3.3	Bony-type Sub-Laplacians	202
4.3.4	Kolmogorov-type Sub-Laplacians	204
4.3.5	Sub-Laplacians Arising in Control Theory	205
4.3.6	Filiform Carnot Groups	207
4.4	Fields not Satisfying One of the Hypotheses (H0), (H1), (H2)	210
4.4.1	Fields not Satisfying Hypothesis (H0)	210
4.4.2	Fields not Satisfying Hypothesis (H1)	212
4.4.3	Fields not Satisfying Hypothesis (H2)	215
4.5	Exercises of Chapter 4	215

5 The Fundamental Solution for a Sub-Laplacian and Applications 227

5.1 Homogeneous Norms 229

5.2 Control Distances or Carnot–Carathéodory Distances 232

5.3 The Fundamental Solution 236

5.3.1 The Fundamental Solution in the Abstract Setting 244

5.4 \mathcal{L} -gauges and \mathcal{L} -radial Functions 246

5.5 Gauge Functions and Surface Mean Value Theorem 251

5.6 Superposition of Average Operators 257

5.7 Harnack Inequalities 262

5.8 Liouville-type Theorems 269

5.8.1 Asymptotic Liouville-type Theorems 274

5.9 Sobolev–Stein Embedding Inequality 276

5.10 Analytic Hypoellipticity of Sub-Laplacians 280

5.11 Harmonic Approximation 287

5.12 An Integral Representation Formula for Γ 291

5.13 Appendix A. Maximum Principles 293

5.13.1 A Decomposition Theorem for \mathcal{L} -harmonic Functions 303

5.14 Appendix B. The Improved Pseudo-triangle Inequality 306

5.15 Appendix C. Existence of Geodesics 309

5.16 Exercises of Chapter 5 319

Part II Elements of Potential Theory for Sub-Laplacians

6 Abstract Harmonic Spaces 337

6.1 Preliminaries 338

6.2 Sheafs of Functions. Harmonic Sheafs 340

6.2.1 Harmonic Measures and Hyperharmonic Functions 341

6.2.2 Directed Families of Functions 342

6.3 Harmonic Spaces 345

6.3.1 Directed Families of Harmonic and Hyperharmonic Functions 347

6.4 \mathcal{B} -hyperharmonic Functions. Minimum Principle 348

6.5 Subharmonic and Superharmonic Functions. Perron Families 353

6.6 Harmonic Majorants and Minorants 358

6.7 The Perron–Wiener–Brelot Operator 359

6.8 \mathfrak{S} -harmonic Spaces: Wiener Resolutivity Theorem 363

6.8.1 Appendix: The Stone–Weierstrass Theorem 366

6.9 \mathcal{H} -harmonic Measures for Relatively Compact Open Sets 367

6.10 \mathfrak{S}^* -harmonic Spaces: Bouligand’s Theorem 370

6.11 Reduced Functions and Balayage 375

6.12 Exercises of Chapter 6 378

7	The \mathcal{L}-harmonic Space	381
7.1	The \mathcal{L} -harmonic Space	381
7.2	Some Basic Definitions and Selecta of Properties	388
7.3	Exercises of Chapter 7	392
8	\mathcal{L}-subharmonic Functions	397
8.1	Sub-mean Functions	397
8.2	Some Characterizations of \mathcal{L} -subharmonic Functions	401
8.3	Continuous Convex Functions on \mathbb{G}	411
8.4	Exercises of Chapter 8	422
9	Representation Theorems	425
9.1	\mathcal{L} -Green Function for \mathcal{L} -regular Domains	425
9.2	\mathcal{L} -Green Function for General Domains	427
9.3	Potentials of Radon Measures	432
9.3.1	Potentials Related to the Average Operators	435
9.4	Riesz Representation Theorems for \mathcal{L} -subharmonic Functions	441
9.5	The Poisson–Jensen Formula	445
9.6	Bounded-above \mathcal{L} -subharmonic Functions in \mathbb{G}	451
9.7	Smoothing of \mathcal{L} -subharmonic Functions	455
9.8	Isolated Singularities—Bôcher-type Theorems	458
9.8.1	An Application of Bôcher’s Theorem	462
9.9	Exercises of Chapter 9	463
10	Maximum Principle on Unbounded Domains	473
10.1	MP Sets and \mathcal{L} -thinness at Infinity	473
10.2	q -sets and the Maximum Principle	477
10.3	The Maximum Principle on Unbounded Domains	482
10.4	The Proof of Lemma 10.2.3	483
10.5	Exercises of Chapter 10	487
11	\mathcal{L}-capacity, \mathcal{L}-polar Sets and Applications	489
11.1	The Continuity Principle for \mathcal{L} -potentials	489
11.2	\mathcal{L} -polar Sets	491
11.3	The Maria–Frostman Domination Principle	494
11.4	\mathcal{L} -energy and \mathcal{L} -equilibrium Potentials	497
11.5	\mathcal{L} -balayage and \mathcal{L} -capacity	500
11.6	The Fundamental Convergence Theorem	510
11.7	The Extended Poisson–Jensen Formula	514
11.8	Further Results. A Miscellanea	519
11.9	Further Reading and the Quasi-continuity Property	527
11.10	Exercises of Chapter 11	533

12	\mathcal{L}-thinness and \mathcal{L}-fine Topology	537
12.1	The \mathcal{L} -fine Topology: A More Intrinsic Tool	537
12.2	\mathcal{L} -thinness at a Point	538
12.3	\mathcal{L} -thinness and \mathcal{L} -regularity	542
12.3.1	Functions Peaking at a Point	542
12.3.2	\mathcal{L} -thinness and \mathcal{L} -regularity	544
12.4	Wiener's Criterion for Sub-Laplacians	547
12.4.1	A Technical Lemma	547
12.4.2	Wiener's Criterion for \mathcal{L}	550
12.5	Exercises of Chapter 12	553
13	d-Hausdorff Measure and \mathcal{L}-capacity	557
13.1	d -Hausdorff Measure and Dimension	557
13.2	d -Hausdorff Measure and \mathcal{L} -capacity	561
13.3	New Phenomena Concerning the d -Hausdorff Dimension	569
13.4	Exercises of Chapter 13	572

Part III Further Topics on Carnot Groups

14	Some Remarks on Free Lie Algebras	577
14.1	Free Lie Algebras and Free Lie Groups	577
14.2	A Canonical Way to Construct Free Carnot Groups	584
14.2.1	The Campbell–Hausdorff Composition \diamond	584
14.2.2	A Canonical Way to Construct Free Carnot Groups	586
14.3	Exercises of Chapter 14	589
15	More on the Campbell–Hausdorff Formula	593
15.1	The Campbell–Hausdorff Formula for Stratified Fields	593
15.2	The Campbell–Hausdorff Formula for Formal Power Series–1	599
15.3	The Campbell–Hausdorff Formula for Formal Power Series–2	605
15.4	The Campbell–Hausdorff Formula for Smooth Vector Fields	610
15.5	Exercises of Chapter 15	616
16	Families of Diffeomorphic Sub-Laplacians	621
16.1	An Isomorphism Turning $\sum_{i,j} a_{i,j} X_i X_j$ into $\Delta_{\mathbb{G}}$	622
16.2	Examples and Counter-examples	628
16.3	Canonical or Non-canonical?	637
16.3.1	An Example	641
16.4	Further Reading: An Application to PDE's	644
16.5	Exercises of Chapter 16	645

17	Lifting of Carnot Groups	649
17.1	Lifting to Free Carnot Groups	649
17.2	An Example of Lifting	659
17.3	An Example of Application to PDE's	661
17.4	Folland's Lifting of Homogeneous Vector Fields	666
17.4.1	The Hypotheses on the Vector Fields	669
17.5	Exercises of Chapter 17	676
18	Groups of Heisenberg Type	681
18.1	Heisenberg-type Groups	681
18.2	A Direct Characterization of H-type Groups	686
18.3	The Fundamental Solution on H-type Groups	695
18.4	H-type Groups of Iwasawa-type	702
18.5	The H-inversion and the H-Kelvin Transform	704
18.6	Exercises of Chapter 18	709
19	The Carathéodory–Chow–Rashevsky Theorem	715
19.1	The Carathéodory–Chow–Rashevsky Theorem for Stratified Vector Fields	715
19.2	An Application of Carathéodory–Chow–Rashevsky Theorem	727
19.3	Exercises of Chapter 19	730
20	Taylor Formula on Carnot Groups	733
20.1	Polynomials and Derivatives on Homogeneous Carnot Groups	734
20.1.1	Polynomial Functions on \mathbb{G}	734
20.1.2	Derivatives on \mathbb{G}	736
20.2	Taylor Polynomials on Homogeneous Carnot Groups	741
20.3	Taylor Formula on Homogeneous Carnot Groups	746
20.3.1	Stratified Taylor Formula with Peano Remainder	751
20.3.2	Stratified Taylor Formula with Integral Remainder	754
20.4	Exercises of Chapter 20	766
	References	773
	Index of the Basic Notation	789
	Index	795
