Contents

Part I Introduction

Rule Extraction from Support Vector Machines: An Introduction
Joachim Diederich .................................................. 3
1 Explanation: The Foundations .................................. 3
   1.1 Forms of Explanation ...................................... 4
   1.2 Analogy as a Form of Explanation ......................... 5
   1.3 Explanation-Based Generalization .......................... 6
   1.4 How and Why Explanations ................................. 7
   1.5 Generating or Identifying the Best Explanation .......... 8
2 Rule Extraction from Support Vector Machines: Aims and Significance ............................................. 8
   2.1 Provision of a “User Explanation” Capability .......... 9
   2.2 Transparency ............................................. 10
   2.3 Software Verification ...................................... 10
   2.4 Improving Generalisation .................................. 11
   2.5 Data Exploration and the Induction of Scientific Theories .. 11
3 Translucency and Rule Quality ................................. 11
   3.1 The Neural Network Case .................................. 12
   3.2 Translucency and Rule Quality Applied to Rule Extraction from SVMs ............................................. 13
4 An Alternative View on Rule Extraction: Information Retrieval .................................................. 14
5 A Case Study .................................................. 16
6 A Classification System for Rule Extraction from SVMs .................................................. 26
7 Conclusions and Future Challenges .............................. 28
8 Acknowledgements ............................................. 30
References ...................................................... 30
Rule Extraction from Support Vector Machines: An Overview of Issues and Application in Credit Scoring  
*David Martens, Johan Huysmans, Rudy Setiono, Jan Vanthienen, and Bart Baesens*

1 Introduction ................................................. 34  
2 The Support Vector Machine .................................. 34  
3 The Rationale Behind SVM Rule Extraction ..................... 36  
4 An Overview of SVM Rule Extraction Techniques ............... 38  
5 Issues Concerning SVM Rule Extraction ........................ 49  
6 Credit Scoring Application .................................... 53  
7 Alternatives to Rule Extraction ................................ 56  
8 Conclusion .................................................. 59  
9 Acknowledgement ............................................ 59  
References ...................................................... 59

Part II Algorithms and Techniques

Rule Extraction for Transfer Learning  
*Lisa Torrey, Jude Shavlik, Trevor Walker, and Richard Maclin*  
1 Introduction .................................................. 67  
2 Transfer Learning and Advice Taking ........................... 67  
3 SVMs in Reinforcement Learning ................................. 69  
4 Extracting Rules from an RL Source Task ...................... 71  
5 Case Study .................................................. 76  
6 Policy-Transfer Results ....................................... 78  
7 Skill-Transfer Results ....................................... 79
X  Contents

3  The Spanning of SVM Tree ..................................... 141
  3.1  Depth-First Spanning Tree .................................. 142
  3.2  Breadth-First Spanning Tree ................................. 142
  3.3  The SVMT Algorithms  ..................................... 143
  3.4  Coping with Class Imbalance and Class Overlap .......... 145
4  SVMT Rules Extraction ...................................... 145
  4.1  Logic Association Rules .................................. 145
  4.2  SVM Nodes Interpolation .................................. 146
  4.3  SVMT-Rule ............................................. 149
5  Experiments and Applications ................................. 152
  5.1  Synthetic Dataset ........................................ 152
  5.2  Cancer Diagnosis ........................................ 156
  5.3  Fraud Detection .......................................... 158
6  Discussions and Conclusions ................................. 159
7  Acknowledgements .......................................... 160
References ...................................................... 160

Prototype Rules from SVM
Marcin Blachnik and W/łodzisław Duch ....................... 163

1  Why Prototype-Based Rules? ................................. 163
2  P-Rules and Their Interpretation ............................. 165
  2.1  Types of P-Rules ....................................... 166
  2.2  Support Vectors as Prototypes ............................ 166
  2.3  Removing Linear Dependencies Among Support Vectors .. 167
  2.4  Reducing the Number of Support Vectors ................. 169
  2.5  Finding Optimal Number of Support Vectors .............. 171
  2.6  Problems with Interpretation ............................. 174
3  Searching for Informative Prototypes ....................... 174
  3.1  Prototype Selection Using Context Dependent Clustering . 176
  3.2  The Conditional Fuzzy Clustering Algorithm .............. 177
  3.3  Determining the Context ................................ 178
  3.4  Numerical Illustration of the CFCM Approach ............ 178
4  Conclusions .................................................. 180
References ...................................................... 181

Part III Applications

Rolf Mitsdorffer and Joachim Diederich ....................... 185
1  Motivation ................................................. 185
2  Introduction ............................................... 186
  2.1  Financial Data Mining .................................... 186
## Accent in Speech Samples: Support Vector Machines for Classification and Rule Extraction

*Carol Pedersen and Joachim Diederich*

1 Introduction ............................................. 205
   1.1 Motivation and Significance ............................. 205
   1.2 Overview ............................................... 205
2 Accent Recognition ........................................ 206
   2.1 Accent ................................................ 206
   2.2 Automatic Speech Recognition ......................... 207
   2.3 Mel Frequency Cepstrum Coefficients .................. 208
3 Rule Extraction from Support Vector Machines for Accent .... 209
   3.1 Support Vector Machines .............................. 209
   3.2 Rule Extraction ....................................... 210
   3.3 Objectives ............................................ 211
4 Methodology ................................................ 211
   4.1 Speech Data and Feature Extraction ................. 211
   4.2 Machine Learning Experiments ....................... 212
   4.3 Rule Extraction and Evaluation ...................... 213
5 Results .................................................. 213
   5.1 Machine Learning Experiments ....................... 213
   5.2 Evaluation of the Rule Extraction Results ........ 218
6 Discussion ................................................ 223
References .................................................. 225

## Rule Extraction from SVM for Protein Structure Prediction

*Jieyue He, Hae-jin Hu, Bernard Chen, Phang C. Tai, Rob Harrison, and Yi Pan*  

1 Introduction ............................................. 227
2 Rule Generation by Combing SVM and DT .................. 229
   2.1 SVM_DT ............................................ 229
2.2 Protein Second Structure Prediction with SVM_DT ............. 231
2.3 Transmembrane Segments Prediction and Understanding
Using SVM_DT .................................................. 235
3 Extracting Rule from SVM Based on Association Rule ............ 238
  3.1 Association Rule Based Method ................................ 238
  3.2 Association Rule Mining ...................................... 239
4 Rule Clustering and Super-rule Generation ....................... 244
5 Conclusions ..................................................... 247
6 Acknowledgements ................................................. 249
References .......................................................... 249

Subject Index ....................................................... 253

Author Index ....................................................... 261
Rule Extraction from Support Vector Machines
Diederich, J. (Ed.)
2008, XII, 262 p. 55 illus., Hardcover
ISBN: 978-3-540-75389-6
