## Contents

### Part I Introduction

Rule Extraction from Support Vector Machines: An Introduction  
*Joachim Diederich*  
3
- Explanation: The Foundations ............................................. 3
  - 1.1 Forms of Explanation ........................................ 4
  - 1.2 Analogy as a Form of Explanation ......................... 5
  - 1.3 Explanation-Based Generalization ......................... 6
  - 1.4 How and Why Explanations ................................... 7
  - 1.5 Generating or Identifying the Best Explanation .............. 8
- Rule Extraction from Support Vector Machines: Aims and Significance .................................................. 8
  - 2.1 Provision of a “User Explanation” Capability .............. 9
  - 2.2 Transparency ........................................... 10
  - 2.3 Software Verification ..................................... 10
  - 2.4 Improving Generalisation ................................... 11
  - 2.5 Data Exploration and the Induction of Scientific Theories 11
- Translucency and Rule Quality ........................................ 11
  - 3.1 The Neural Network Case .................................. 12
  - 3.2 Translucency and Rule Quality Applied to Rule Extraction  
    from SVMs .................................................. 13
- An Alternative View on Rule Extraction: Information Retrieval  
  ................................................................. 14
- A Case Study .......................................................... 16
- A Classification System for Rule Extraction from SVMs ........ 26
- Conclusions and Future Challenges ................................. 28
- Acknowledgements .................................................... 30
References ................................................................. 30
Rule Extraction from Support Vector Machines: An Overview of Issues and Application in Credit Scoring
David Martens, Johan Huysmans, Rudy Setiono, Jan Vanthienen, and Bart Baesens

1 Introduction
2 The Support Vector Machine
3 The Rationale Behind SVM Rule Extraction
   3.1 Why Rule Extraction
   3.2 Why SVM Rule Extraction
4 An Overview of SVM Rule Extraction Techniques
   4.1 Classification Scheme for SVM Rule Extraction Techniques
   4.2 SVM Rule Extraction Techniques
5 Issues Concerning SVM Rule Extraction
   5.1 Rule Output
   5.2 High Dimensional Data
   5.3 Constraint Based Learning: Knowledge Fusion Problem
   5.4 Specificity of Underlying Black Box Model
   5.5 Regression
   5.6 Availability of Code
6 PDF
   6.1 Credit Scoring in Basel II
   6.2 Classification Model
7 Alternatives to Rule Extraction
   7.1 Inverse Classification
   7.2 Self Organizing Maps
   7.3 Incremental Approach
8 Conclusion
9 Acknowledgement
References

Part II Algorithms and Techniques

Rule Extraction for Transfer Learning
Lisa Torrey, Jude Shavlik, Trevor Walker, and Richard Maclin

1 Introduction
2 Transfer Learning and Advice Taking
3 SVMs in Reinforcement Learning
4 Extracting Rules from an RL Source Task
   4.1 Acquiring Rules from the Q-function
   4.2 Acquiring Rules from Observed Behavior
5 Case Study
   5.1 Policy-Transfer Results
   5.2 Skill-Transfer Results
# Rule Extraction from Linear Support Vector Machines via Mathematical Programming

*Glenn Fung, Sathyakama Sandilya, and R. Bharat Rao*

1. Introduction ........................................................................ 83
   1.1 About Notation .................................................. 84
2. Medical Relevance .......................................................... 85
3. Sparse Hyperplane Classifiers: 1-Norm Support Vector Machines .. 86
4. Rule Extraction from Hyperplane Classifiers ..................... 87
   4.1 Volume Maximization Criteria ............................... 90
   4.2 Point Coverage Maximization Criteria ..................... 91
5. Algorithm Convergence Properties .................................. 93
6. Numerical Testing .......................................................... 96
   6.1 WDBC Dataset .................................................. 98
   6.2 The Lung CAD Dataset ......................................... 99
7. Other Mathematical Programming Formulations .................. 99
   7.1 Conditioning Rules by Using Prior Knowledge ............. 99
   7.2 Creating a Rule that Covers an Specific Given Point or Set of Points ................................................. 100
   7.3 Rule Extraction and Knowledge-Based SVMS for Incremental Learning ................................................. 101
8. Conclusion and Future Directions .................................. 104
References ........................................................................ 105

# Rule Extraction Based on Support and Prototype Vectors

*Haydemar Núñez, Cecilio Angulo, and Andreu Catalá* .......................... 109

1 Combining Support Vectors and Prototype Vectors to Extract Rules ................................................. 110
   1.1 Building an Ellipsoid and Its Associated Rule Equation .... 112
   1.2 Generating a Set of Rules ....................................... 118
   1.3 Simplified Representational Language for the Model ..... 122
   1.4 Classification by Using the Set of Rules .................... 126
2 Experiments ...................................................................... 127
3 Eliminating Randomness from the Clustering Algorithm ......... 130
4 Conclusions and Further Research .................................. 132
References ........................................................................ 133

# SVMT-Rule: Association Rule Mining Over SVM Classification Trees

*Shaoning Pang and Nik Kasabov* ........................................... 135

1 Introduction ..................................................................... 135
2 SVM Classification Tree ................................................. 137
   2.1 Two-Class SVM Tree ............................................ 137
X Contents

3 The Spanning of SVM Tree ........................................ 141
  3.1 Depth-First Spanning Tree ................................. 142
  3.2 Breadth-First Spanning Tree ............................... 142
  3.3 The SVMT Algorithms ................................... 143
  3.4 Coping with Class Imbalance and Class Overlap ............. 145
4 SVMT Rules Extraction ........................................... 145
  4.1 Logic Association Rules .................................. 145
  4.2 SVM Nodes Interpolation .................................. 146
  4.3 SVMT-Rule ............................................. 149
5 Experiments and Applications ..................................... 152
  5.1 Synthetic Dataset ........................................ 152
  5.2 Cancer Diagnosis ......................................... 156
  5.3 Fraud Detection ........................................... 158
6 Discussions and Conclusions ................................... 159
7 Acknowledgements ............................................... 160
References .................................................................. 160

Prototype Rules from SVM
Marcin Blachnik and W/ław Duch............................ 163

1 Why Prototype-Based Rules? ................................. 163
2 P-Rules and Their Interpretation ............................. 165
  2.1 Types of P-Rules ........................................ 166
  2.2 Support Vectors as Prototypes ............................. 166
  2.3 Removing Linear Dependencies Among Support Vectors ... 167
  2.4 Reducing the Number of Support Vectors .................. 169
  2.5 Finding Optimal Number of Support Vectors ............. 171
  2.6 Problems with Interpretation ............................. 174
3 Searching for Informative Prototypes ....................... 174
  3.1 Prototype Selection Using Context Dependent Clustering . 176
  3.2 The Conditional Fuzzy Clustering Algorithm ............. 177
  3.3 Determining the Context .................................. 178
  3.4 Numerical Illustration of the CFCM Approach ............. 178
4 Conclusions .................................................. 180
References .................................................................. 181

Part III Applications

Prediction of First-Day Returns of Initial Public Offering in
the US Stock Market Using Rule Extraction from Support
Vector Machines
Rolf Mitsdorffer and Joachim Diederich.................... 185

1 Motivation .................................................. 185
2 Introduction .................................................. 186
  2.1 Financial Data Mining .................................... 186
2.2 Protein Second Structure Prediction with SVM_DT ................. 231
2.3 Transmembrane Segments Prediction and Understanding
   Using SVM_DT.......................................................... 235
3 Extracting Rule from SVM Based on Association Rule ............ 238
  3.1 Association Rule Based Method ............................. 238
  3.2 Association Rule Mining........................................ 239
4 Rule Clustering and Super-rule Generation ........................ 244
5 Conclusions................................................................. 247
6 Acknowledgements ...................................................... 249
References ........................................................................ 249

Subject Index ..................................................................... 253

Author Index .................................................................... 261
Rule Extraction from Support Vector Machines
Diederich, J. (Ed.)
2008, XII, 262 p. 55 illus., Hardcover
ISBN: 978-3-540-75389-6
