
Contents

1 Introduction to Eye Monitoring	
1.1 A Century of Eye Monitoring	1
1.2 From Active to Passive Eye Monitoring	1
1.3 Terminologies and Definitions	4
1.3.1 Eye Monitoring Terms	4
1.3.2 Human Eyeball Model	4
1.3.3 Types of Eye Movement	6
1.4 Building Blocks	8
1.5 Applications	12
1.6 Overview of the Book's Contents	14

Part I Low-Level Building-Blocks – Eye Region Modeling, Automatic Eye Position Detection, and Spatial Eye Position Tracking

2 Meticulously Detailed Eye Region Model	
2.1 Position of the Problem	23
2.2 Eye Region Model	24
2.2.1 Upper Eyelid	25
2.2.2 Lower Eyelid	30
2.2.3 Sclera	32
2.2.4 Corners	32
2.2.5 Iris	33
2.3 Model-based Eye Image Analysis	33
2.3.1 Head Motion Stabilization	34
2.3.2 Individualization of Eye Region Model	35
2.3.3 Tracking of Eye Motion	37
2.4 Experiments	38

2.4.1	Cohn–Kanade AU-coded Facial Expression Image Database	39
2.4.2	Ekman–Hager Facial Action Exemplars	39
2.5	Results and Evaluation	39
2.5.1	Examples	40
2.5.2	Quantitative Evaluation	43
2.5.3	Tracking Results by Automated Individualization	50
2.6	Conclusion	52

3 Advanced Off-Line Statistical Modeling of Eye and Non-Eye Patterns

3.1	Position of the Problem	55
3.2	Review of Pattern Classification Techniques	57
3.2.1	Principal Components Analysis	58
3.2.2	Linear Discriminant Analysis	58
3.2.3	Support Vector Machine	59
3.2.4	Finite Mixture Models	60
3.3	The Generalized Dirichlet Mixture	61
3.4	Learning of Finite Generalized Dirichlet Mixtures	63
3.4.1	Deterministic Generalized Dirichlet Mixture Learning	64
3.4.2	Bayesian Learning of a Generalized Dirichlet Mixture	67
3.5	Experimental Results	73
3.5.1	Eye Representation	73
3.5.2	Image Database Categorization	76
3.5.3	Distinguishing Eye from Non-eye	79
3.6	Conclusion	81

4 Automatic Eye Position Detection and Tracking Under Natural Facial Movement

4.1	Position of the Problem	83
4.2	Related Work	85
4.2.1	Facial Feature Tracking in Nearly Frontal View	85
4.2.2	Facial Feature Tracking Under Varying Pose and Expressions	86
4.3	Facial Feature Tracking Algorithm	90
4.3.1	Hierarchical Multi-state Pose-dependent Facial Shape Model	90
4.3.2	Multi-modal Facial Feature Tracking	95
4.3.3	Hybrid Facial Feature Representation	98
4.4	Experimental Results	101
4.4.1	Experiments on Facial Feature Tracking	101
4.4.2	Quantitative Evaluation	103
4.4.3	Comparison with Mixture of Gaussian Model	103
4.5	Conclusion	106

Part II Mid-Level Building-Blocks – Gaze Calibration, Gaze & Eye Pose Tracking, and Eye Images Interpretation

5 Simple-to-Calibrate Gaze Tracking Method

5.1	Position of the Problem	111
5.1.1	Why is Personal Calibration Required?	113
5.2	Existing Personal Calibration Methods	114
5.3	Two-Point Calibration Gaze Tracking Method	115
5.3.1	Eye Positioning with Stereo Camera	116
5.3.2	Gaze Direction Calculation with the Geometric Eyeball Model	117
5.3.3	Gaze Compensation with Personal Calibration	121
5.3.4	Implementation	124
5.4	One-Point Calibration Gaze Tracking Method	126
5.4.1	Implementation	129
5.5	Conclusion	131

6 Free Head Motion Eye Gaze Tracking Techniques

6.1	Position of the Problem	133
6.2	Multiple Cameras Techniques	134
6.3	Single Camera Techniques	135
6.3.1	Convex Mirror Technique	135
6.3.2	Cross Ratio	138
6.4	Simulation of the Single Camera Techniques	141
6.4.1	Mirror Technique Simulation Results	142
6.4.2	Corneal Reflection Simulation Results	143
6.4.3	Using a Constant $\alpha = 2.0$	143
6.4.4	Calibrated Cross-Ratio Method	146
6.5	β Calibration: A New Cross-Ratio Technique	146
6.6	Implementation Issues	148
6.7	Experimental Results	150
6.8	Conclusion	152

7 Extraction of Visual Information from Images of Eyes

7.1	What Do Eyes Reveal?	153
7.2	Physical Model of the Eye	155
7.3	Finding the Pose of an Eye	157
7.3.1	Limbus Localization	157
7.3.2	3D Location of the Cornea	159
7.3.3	3D Orientation of the Cornea	160
7.4	The Corneal Imaging System	161
7.4.1	Viewpoint Locus	161
7.4.2	Field of View	163
7.4.3	Resolution	165

7.4.4	Epipolar Geometry of Eyes	168
7.5	The World from Eyes	170
7.5.1	Where Are You?	170
7.5.2	What Are You Looking at?	173
7.5.3	What is its Shape?	174
7.6	Implications	175
7.7	Conclusion	176

Part III Gaze-based Interactions

8 Gaze-based Interaction

8.1	From Eye Movement to Interaction	181
8.1.1	Nature of Eye Movements	182
8.2	Eye Typing and Various Selection Tasks	183
8.2.1	Midas Touch	183
8.3	Interaction Without Selection	185
8.3.1	Interactive Video Applications	185
8.3.2	Attentive Displays and Appliances	185
8.3.3	Intention Estimation	187
8.4	Communication with Gaze	189
8.5	Discussion	192
8.6	Conclusion	193

9 Gaze-Contingent Volume Rendering

9.1	Introduction	195
9.2	Review of Past Work	196
9.2.1	Review: Eye and Gaze Tracking	196
9.2.2	Review: Gaze Contingent Displays	197
9.2.3	Review: Rendering of Volume Data	200
9.3	Stereoscopic Display and Gaze-tracking	202
9.3.1	Eye-proximal Illumination	203
9.3.2	3-D Gaze-tracking and Taking Advantage of Motion	205
9.3.3	Calibration	207
9.3.4	Real-time Gaze-tracker Operation	209
9.4	Spatially-variant Volume Renderer	209
9.4.1	Composition	212
9.4.2	Transfer Functions for GCD and Region-enhancement	212
9.4.3	GLSL Shader Program	215
9.4.4	Spatially-Variant Weighting	215
9.4.5	Pre-Calculation	216
9.5	Volumetric Gaze-Contingent Display	219
9.5.1	Gaze-Contingent Single-Modality Exploration	219
9.5.2	Gaze-contingent Multi-modality Exploration	221
9.6	Conclusion and Future Work	223

10 A Temporal Multiresolution Pyramid for Gaze-Contingent: Manipulation of Natural Video	
10.1 Introduction	225
10.2 Multiresolution Pyramids	228
10.3 Algorithm	231
10.3.1 Notational Conventions	232
10.3.2 Relationships Between Pyramid Levels	233
10.3.3 Sliding Window Boundaries	233
10.3.4 Pyramid Update Algorithm	235
10.3.5 Gaze-Contingent Temporal Filtering Algorithm	235
10.3.6 Miscellaneous Considerations	238
10.4 Implementation and Results	239
10.5 Discussion and Future Work	241

Part IV Eye Monitoring in Military and Security Realms

11 Measuring the Eyes for Military Applications	
11.1 Introduction	247
11.2 Background	247
11.2.1 The TADMUS Program	248
11.2.2 The A2C2 Program	249
11.2.3 Other ONR Collaborative Research	250
11.3 Interface Design and Evaluation	250
11.3.1 Example 1	250
11.3.2 Example 2	252
11.4 Performance Appraisal	255
11.5 Cognitive Workload	260
11.6 Conclusion and Future Work	263
12 Passive Eye Monitoring in Information Security	
12.1 Introduction	265
12.2 Authentication in Information Systems	266
12.3 Passive Eye Monitoring for Password Entry	268
12.3.1 Analysis of the Single Image Approach	271
12.3.2 Analysis of the Multiple Tile Approach	272
12.3.3 Eye Monitoring Aware Authentication Schemes	273
12.3.4 Experimental Investigation	276
12.4 Eye Monitoring for Biometric Authentication	277
12.5 Multiple-Factor Authentication Using Passive Eye Monitoring . . .	280
12.6 Conclusion and Future Work	281

Part V Eye Monitoring in Automotive and Medicine

13 Driver Cognitive Distraction Detection Using Eye Movements

13.1 Introduction 285

13.2 Types of Distraction 285

13.3 The Process of Identifying Cognitive Distraction 288

13.4 Data Mining Techniques to Assess Cognitive State 290

 13.4.1 Support Vector Machines (SVMs) 291

 13.4.2 Bayesian Networks (BNs) 291

13.5 Comparisons of SVMs and BNs 292

 13.5.1 Data Source 292

 13.5.2 Feature Refinement 293

 13.5.3 Model Training 294

 13.5.4 Model Evaluation 296

 13.5.5 Model Comparison 296

13.6 Discussion and Conclusions 298

14 Alertometer: Detecting and Mitigating Driver Drowsiness and Fatigue Using an Integrated Human Factors and Computer Vision Approach

14.1 Overview 301

14.2 Driver Drowsiness and Fatigue as Risks to Highway Safety: Problem Size 302

14.3 Approaches to Minimize Driver Drowsiness 304

14.4 Measures for Detecting Driver Drowsiness 306

14.5 Computer Vision Algorithms for Detecting Driver Drowsiness 309

 14.5.1 Eyelid Spacing Estimation 310

 14.5.2 Pupil and Iris Detection 313

 14.5.3 Eye Blink Detection 315

14.6 Effective Countermeasures for Mitigating Driver Drowsiness 317

14.7 Discussion and Conclusions 320

15 Eye Monitoring Applications in Medicine

15.1 Introduction 323

15.2 Eye Monitoring in Radiology 324

 15.2.1 Overview 324

 15.2.2 Visual Search 326

 15.2.3 Errors and Visual Dwell Time 327

 15.2.4 Understanding the Nature of Expertise in Radiology 333

 15.2.5 Developing Aids to Image Perception 334

15.3 Eye Gaze Tracking in Surgery 335

 15.3.1 Introduction to Minimally Invasive Surgery (MIS) 335

 15.3.2 Robotically-assisted Surgery 335

15.3.3	Eye Monitoring in MIS	336
15.3.4	Eye Monitoring in Lab-based MIS	337
15.3.5	Eye Monitoring in the Operating Room	340
15.3.6	Other Applications of Eye Monitoring in MIS	341
15.3.7	Future Perspectives: Gaze Contingent Control in Robotically-assisted Surgery	341
15.4	Discussion and Conclusions	342

Part VI Eye Monitoring in Information Retrieval and Interface Design Assessment

16 Eye Monitoring in Online Search

16.1	Introduction	347
16.2	Methodology	347
16.2.1	Eye Monitoring Hardware	347
16.2.2	Interpreting Eye Movements	348
16.2.3	Eye Monitoring Methodology	351
16.3	Eye Monitoring in Information Retrieval	355
16.3.1	Relevant Information Retrieval Research	356
16.3.2	Existing Research Findings	357
16.3.3	Overall Viewing Patterns	358
16.3.4	Number of Results Viewed	360
16.3.5	Viewing Sequence	362
16.3.6	Result Position	365
16.3.7	Task Types and Other Influences	366
16.3.8	Attention to Results Based on Rank	368
16.3.9	Most Viewed Information in the Surrogate	369
16.4	Combining Eye Monitoring with Implicit Measures	370
16.4.1	Eye Monitoring and Server Log Data	370
16.4.2	Eye Monitoring and Mouse Movement Data	371
16.5	Conclusion	371

17 Studying Cognitive Processes in Computer Program Comprehension

17.1	Introduction	373
17.2	Related Work	375
17.2.1	Capturing Visual Attention During Computer Programming	375
17.2.2	Studying Visual Attention in Programming Behavior	376
17.3	Minimally Sufficient Analyses of Sparse Eye Monitoring Data	379
17.3.1	Visual Analysis of the Eye Monitoring Data	382
17.3.2	Analyzing Trends of the Sparse Eye Monitoring Data	384
17.4	Conclusion	386

18 Eye Monitoring Studies on TV News and the Web Converge: A Tale of Two Screens	
18.1 Introduction	387
18.2 On-Screen TV News Enhancements	388
18.2.1 Television and Dual-Processing Theory	389
18.2.2 Visual Attention and Dual-Processing Theory	390
18.2.3 Method	391
18.2.4 Results	394
18.2.5 Analysis and Conclusion	402
18.3 Repeated Scanning of Web Portal Pages	404
18.3.1 The Internet and Scanpath Theory	406
18.3.2 Method	408
18.3.3 Conclusion	417
18.4 Passive Eye Monitoring Challenges	417
18.4.1 TV Studies	418
18.4.2 Web Studies	418
18.4.3 Compounded Challenges in Converged Media	419
Acknowledgements	421
Biographies	423
