Contents

Introduction .................................................................................................................. 1

1 Fundamentals of Clay Mineral Crystal Structure and Physicochemical Properties ........................................ 3
  Introduction .............................................................................................................. 3
  1.1 The Common Structure of Phyllosilicates .......................................................... 3
    1.1.1 From Atomic Sheets to Layers ................................................................... 4
    1.1.2 Negatively Charged Layers ....................................................................... 8
    1.1.3 The Different Layer-to-Layer Chemical Bonds ......................................... 10
  1.2 Polytypes and Mixed Layer Minerals ............................................................... 11
    1.2.1 Layers of Identical Composition: Polytypes ........................................... 11
    1.2.2 Layers of Different Composition: Mixed Layer Minerals ....................... 13
  1.3 Crystallites – Particles – Aggregates ............................................................... 15
    1.3.1 Crystallites: The Limit of the Mineralogical Definition ............................ 15
    1.3.2 Particles and Aggregates ........................................................................... 16
  1.4 The Principal Clay Mineral Species ................................................................. 17
    1.4.1 The Cation Substitutions .......................................................................... 17
    1.4.2 The Principal Mineral Species of the 1:1 Phyllosilicate Group .............. 19
    1.4.3 Principal Mineral Species of the 2:1 Phyllosilicates Group without Interlayer Sheet ......................................................... 20
    1.4.4 The 2:1 Phyllosilicates with an Interlayer Ion Sheet (Micas) .......... 21
    1.4.5 Phyllosilicates with a Brucite-type Interlayer Sheet (2:1:1) .......... 23
    1.4.6 The Fibrous Clay Minerals: Sepiolite and Palygorskite .................. 25
  1.5 Typical Properties of Intermediate Charge Clay Minerals .................................. 26
    1.5.1 Hydration and Swelling ........................................................................... 26
    1.5.2 The Crystallite Outer Surfaces ................................................................ 28
    1.5.3 The Ion Exchange Capacity .................................................................... 30
  1.6 Particularities of Clay Minerals: Size and Continuity ....................................... 34
    1.6.1 Clay Minerals are always Small ................................................................ 34
    1.6.2 The Reduced Number of Layers in the Stacks ........................................ 37
      Typical of Clay Minerals ................................................................................... 37
    1.6.3 From Order-Disorder to Crystal Defects .............................................. 38
    1.6.4 Composition Heterogeneity at the Scale of a Single Layer .................... 41
  1.7 How Do Clay Minerals Grow? ........................................................................... 46
    1.7.1 Phyllosilicate Growth Principles ................................................................ 46
1.7.2 Speculative Interpretation of Growth Processes – 
Crystal Morphology Relations ........................................ 50
1.7.3 Nucleation Processes in Clay-Bearing Rocks ................. 53
1.8 Summary: Clay Minerals in Soils and Weathered Rocks ...... 56
1.8.1 The 2:1 Clay Structure and Its Importance in Soils .......... 56
1.8.2 The Illitic Minerals in Soils and Weathered Rocks .......... 57
1.8.3 Expandable Minerals (Sectites – Vermiculites) ............... 61
1.8.4 Hydroxy Interlayered Minerals ............................... 62
1.8.5 Mixed Layer Minerals in Soils ................................ 67
1.8.6 Kaolinite and Kaolinite/Smectite Mixed Layer Minerals (K/S) .... 68
1.8.7 Allophane and Imogolite ........................................ 69
1.8.8 The Non-Phyllosilicate Minerals in Soils and Weathered Rocks .... 71
1.8.9 Stability of Clay Minerals Formed under 
Weathering Conditions .............................................. 73
Suggested Reading ...................................................... 73

2 Basics for the Study of Soil and Weathered Rock 
Geochemical Systems .................................................. 75
Introduction ..................................................................... 75
2.1 Definition of the Systems ............................................ 76
2.1.1 The Size of the Systems under Consideration ............... 76
2.1.2 The Solutions in Systems of Different Size .................. 87
2.2 The Physicochemical Forces Acting in the Systems .............. 91
2.2.1 Basic Definitions .................................................. 91
2.2.2 The Chemical Potential ........................................ 94
2.2.3 A Particular Chemical Potential: The pH .................... 99
2.2.4 The Oxidation-Reduction Potential (Redox) ................. 105
2.3 Mineral Reactions in Alteration Systems .......................... 108
2.3.1 Conditions at Equilibrium ..................................... 108
2.3.2 kinetics of Alteration Reactions ............................... 110
Suggested Reading ...................................................... 111

3 The Development of Soils and Weathering Profile .................. 113
Introduction ..................................................................... 113
3.1 Physical Description of Soils and Weathering Profiles .......... 114
3.1.1 The Development of Weathering Profiles ..................... 114
3.1.2 The Development of Soils ....................................... 118
3.1.3 Conclusion in a YES or NO Question Series ................. 122
3.2 Dynamics of the Alteration Process under Temperate Conditions: 
An Investigation Comparing Soil and Rock Alteration in Profiles .... 123
3.2.1 Alteration in Temperate Climates ............................... 123
3.2.2 kineticsof Alteration Processes ................................. 125
3.2.3 Kinetics of Soil Formation ....................................... 127
3.3 The Inter-Relation of the Dynamics of the 
Alteration-Soil Profile Sequence .................................. 132
3.3.1 Overview of Soil and Weathering Mineralogy .......... .... 132
3.3.2 The Mineralogy of Soil Horizons ............................... 134
3.3.3 Mineralogical and Chemical Differences between Alteration and Soil Zones ........................................ 135
3.4 What Are the Clay Mineral Assemblages? ................................................................. 137
  3.4.1 Formation of Different Clay Mineral Phases in A Horizon ................................. 137
  3.4.2 General Schema of Alteration Zone and Soil Relations ........................................... 140
  3.4.3 Overview of Alteration in the Soil Zone in Temperate Climates ..................... 142
Suggested Reading ........................................................................................................... 142

4 Clay Mineral Formation in Weathered Rocks: Water–Rock Interaction ................................................................. 143
  Introduction ......................................................................................................................... 143
  4.1 Weathered Rock Profiles in Temperate Climates .................................................... 144
    4.1.1 Weathering at the Landscape Scale .................................................................. 144
    4.1.2 The Parent Rock Control on Weathering Profiles ........................................ 147
    4.1.3 The Climate Control on Weathering Profiles .................................................. 152
    4.1.4 From Macro- to Microscopic Scale ..................................................................... 155
  4.2 The Internal Destabilization of Primary Minerals (Primary Plasmic Microsystems) ....................................................................................................................... 156
    4.2.1 Porosity-Permeability and Microsystems in Crystalline Rocks ...................... 156
    4.2.2 Petrography of Contact Microsystems ............................................................. 163
    4.2.3 Petrography of the Primary Plasmic Microsystems ......................................... 167
  4.3 Mineral Reactions in the Secondary Plasmic Microsystems ............................................. 193
    4.3.1 Petrography of the Secondary Plasmic Microsystems ....................................... 194
    4.3.2 Clays Forming in Secondary Plasmic Microsystems ........................................ 196
  4.4 The Ultimate Weathering Stages .................................................................................. 203
    4.4.1 The Fissural Microsystems: Cutans ..................................................................... 203
    4.4.2 Accumulations (Absolute and Residual) ............................................................. 207
  4.5 The Weathering of Porous Sedimentary Rocks ............................................................... 214
    4.5.1 Glaucenitic Sandstones ....................................................................................... 214
    4.5.2 Weathering of Marls ......................................................................................... 217
  4.6 Possible Models for Weathering Processes .................................................................... 219
    4.6.1 From Heterogeneity to Homogeneity .................................................................. 219
    4.6.2 Mass Balance and Weathering Rates ................................................................... 222
    4.6.3 From Qualitative to Quantitative Models ........................................................... 225
  4.7 Summary of the Water/Rock Interaction Clay-Forming Processes ............................ 237
Suggested Reading ........................................................................................................... 239

5 Plants and Soil Clay Minerals .............................................................................................. 241
  Introduction ......................................................................................................................... 241
  5.1 Dynamics of Clay Reactions in the Soil (Plant/Clay Interaction) Zone of the A Horizon ................................................................. 241
    5.1.1 Disequilibrium in Plant–Soil Zone Clays ............................................................ 241
    5.1.2 Dynamics of Clay Reactions in the Soils .............................................................. 242
  5.2 Clay Mineral Types in the Plant–Soil Interaction Zone ..................................................... 247
    5.2.1 Illite ...................................................................................................................... 247
    5.2.2 Kaolinite .............................................................................................................. 248
8 The Place of Clay Mineral Species in Soils and Alterites ........................................ 321
Introduction ......................................................................................................................... 321
8.1 Where Clay Mineral Types Occur in Alterites and Soils ........................................ 321
  8.1.1 The 2:1 Minerals ........................................................................................................ 322
  8.1.2 Kaolinite and Kaolinite/Smectite Mixed Layer Minerals ........................................ 325
  8.1.3 Gibbsite ..................................................................................................................... 325
  8.1.4 Iron Oxyhydroxides .................................................................................................. 326
  8.1.5 Imogolite and Allophane .......................................................................................... 326
  8.1.6 Chlorites ................................................................................................................... 327
  8.1.7 Palygorskite, Sepiolite .............................................................................................. 327
8.2 Clay Minerals Present in Soils as a Response to Climate ...................................... 328
  8.2.1 Physical Factors and Their Effect on Alteration and Soil Clay Mineral Facies .......... 328
  8.2.2 Weathering Trend (Water – Silicate Chemical Trends) ........................................... 330
8.3 The Impact of Plant Regime on Clay Minerals in Soils ........................................... 334
  8.3.1 Reactivity of Clay Minerals in Ecosystems ................................................................. 334
  8.3.2 Convergence of Soil Clay Mineralogies ................................................................. 337
  8.3.3 Effect of Chemical Translocation by Plants on Clay Mineral Stabilities .............. 338
  8.3.4 Equilibrium and Disequilibrium of Soil Clays ......................................................... 343
8.4 The Structure of Alteration and Clay Formation ..................................................... 344
  8.4.1 Water/Rock Interaction ............................................................................................ 344
  8.4.2 Source Rock and Clays ............................................................................................. 345
  8.4.3 Plant/Soil Interaction ............................................................................................... 345
  8.4.4 Clay Transport .......................................................................................................... 346
  8.4.5 Kinetics of Clay Change in the Soil Zone ................................................................. 347
  8.4.6 Minerals Present and Their Change in the Soil/Plant Interaction Zone ............... 347
  8.4.7 Conclusions ............................................................................................................. 349
8.5 Perspectives for Clay Mineral Science in Surface Environments:......................... 349
  Challenges for the Future ................................................................................................. 349
  8.5.1 Soils and Crops ........................................................................................................ 349
  8.5.2 Soils as a Natural Safety Net for Modern Society ................................................ 351
  Suggested Reading ............................................................................................................. 351

Annexes .............................................................................................................................. 353

Annex 1 – Polytypes .......................................................................................................... 353
  Definition ......................................................................................................................... 353
  An Example: The Mica or Illite Polytypes ..................................................................... 353
