Contents

Part I Plenary Lectures

General Relativistic Hydrodynamics and Magnetohydrodynamics: Hyperbolic Systems in Relativistic Astrophysics
J.A. Font ........................................................................... 3

On Approximations for Overdetermined Hyperbolic Equations
S.K. Godunov ................................................................. 19

Stable Galaxy Configurations
Y. Guo ................................................................. 35

Dissipative Structure of Regularity-Loss Type and Applications
S. Kawashima ............................................................... 45

Dissipative Hyperbolic Systems: the Asymptotic Behavior of Solutions
S. Bianchini, B. Hanouzet, and R. Natalini ......................... 59

Part II Invited Lectures

Higher Order Numerical Schemes for Hyperbolic Systems with an Application in Fluid Dynamics
V. Dolejší ................................................................. 77

A Penalization Technique for the Efficient Computation of Compressible Fluid Flow with Obstacles
G. Chiavassa and R. Donat ........................................... 89

</table>
Compact Third-Order Logarithmic Limiting for Nonlinear Hyperbolic Conservation Laws
M. Čada, M. Torrilhon, and R. Jeltsch .......................... 347

A Finite Volume Grid for Solving Hyperbolic Problems on the Sphere
D. Calhoun, C. Helzel, and R.J. LeVeque .......................... 355

Capturing Infinitely Sharp Discrete Shock Profiles with the Godunov Scheme
C. Chalons and F. Coquel............................................. 363

Propagating Diffusing Pollutant by a Hybrid Eulerian–Lagrangian Method
A. Chertock, E. Kashdan, and A. Kurganov .......................... 371

Nonlocal Conservation Laws with Memory
C. Christoforou .......................................................... 381

Global Weak Solutions for a Shallow Water Equation
G.M. Coclite, H. Holden, and K.H. Karlsen .......................... 389

Structural Stability of Shock Solutions of Hyperbolic Systems in Nonconservation Form via Kinetic Relations
B. Audebert and F. Coquel ............................................. 397

A Hyperbolic Model of Multiphase Flow
D. Amadori and A. Corli .............................................. 407

Nonlinear Stability of Compressible Vortex Sheets
J-F. Coulombel and P. Secchi .......................................... 415

Regularity and Compactness for the DiPerna–Lions Flow
G. Crippa and C. De Lellis ............................................ 423

A Note on $L^1$ Stability of Traveling Waves for a One-Dimensional BGK Model
C.M. Cuesta ............................................................... 431

The Weak Rankine Hugoniot Inequality
B. Després ................................................................. 439

Numerical Investigations Concerning the Strategy of Control of the Spatial Order of Approximation Along a Fitted Gas–Liquid Interface
C. Dickopp and J. Ballmann ........................................... 449
Domain Decomposition Techniques and Hybrid Multiscale Methods for Kinetic Equations
G. Dimarco and L. Pareschi ............................................ 457

A Shock Sensor-Based Second-Order Blended (Bx) Upwind Residual Distribution Scheme for Steady and Unsteady Compressible Flow
J. Dobeš and H. Deconinck ...................................... 465

Artificial Compressibility Approximation for the Incompressible Navier–Stokes Equations on Unbounded Domain
D. Donatelli and P. Marcati .................................... 475

Traveling-Wave Solutions for Hyperbolic Systems of Balance Laws
A. Dressel and W.-A. Yong ....................................... 485

A Hyperbolic-Elliptic Model for Coupled Well-Porous Media Flow
S. Evje and K.H. Karlsen .................................... 493

High-Resolution Finite Volume Methods for Extracorporeal Shock Wave Therapy
K. Fagnan, R.J. LeVeque, T.J. Matula, and B. MacConaghy .... 503

Asymptotic Properties of a Class of Weak Solutions to the Navier–Stokes–Fourier System
E. Feireisl ............................................................ 511

A New Technique for the Numerical Solution of the Compressible Euler Equations with Arbitrary Mach Numbers
M. Feistauer and V. Kučera .................................... 523

Monokinetic Limits of the Vlasov-Poisson/Maxwell-Fokker-Planck System
L. Hsiao, F. Li, and S. Wang ........................................ 533

High-Resolution Methods and Adaptive Refinement for Tsunami Propagation and Inundation
D.L. George and R.J. LeVeque .................................. 541

Young Measure Solutions of Some Nonlinear Mixed Type Equations
H.-P. Gittel ............................................................... 551

Computing Phase Transitions Arising in Traffic Flow Modeling
C. Chalons and P. Goatin ....................................... 559
Dafermos Regularization for Interface Coupling of Conservation Laws
B. Boutin, F. Coquel, and E. Godlewski. ................................. 567

Nonlocal Sources in Hyperbolic Balance Laws with Applications
R.M. Colombo and G. Guerra ........................................... 577

Comparison of Several Finite Difference Methods for Magnetohydrodynamics in 1D and 2D
P. Havelík and R. Liska ..................................................... 585

On Global Large Solutions to 1-D Gas Dynamics
E.E. Endres and H.K. Jenssen. ......................................... 593

A Carbuncle Free Roe-Type Solver for the Euler Equations
F. Kemm ................................................................. 601

WENOCLAW: A Higher Order Wave Propagation Method
D.I. Ketcheson and R.J. LeVeque ..................................... 609

Unsteady Transonic Airfoil Flow Simulations using High-Order WENO Schemes
I. Klioutchnikov, J. Ballmann, H. Oliver, V. Hermes, and A. Alshabu 617

The Predictor–Corrector Method for Solving of Magnetohydrodynamic Problems
T. Kozlinskaya and V. Kovenya ......................................... 625

A Central-Upwind Scheme for Nonlinear Water Waves Generated by Submarine Landslides
A. Kurganov and G. Petrova ............................................... 635

An A Posteriori Error Estimate for Glimm’s Scheme
M. Laforest ................................................................. 643

Multiphase Flows in Mass Transfer in Porous Media
W. Lambert and D. Marchesin .......................................... 653

Nonlinear Hyperbolic–Elliptic Coupled Systems Arising in Radiation Dynamics
C. Lattanzio, C. Mascia, and D. Serra ................................ 661

The Lagrangian Coordinates Applied to the LWR Model
L. Ludovic, C. Estelle, and L. Jorge ................................. 671
Hyperbolic Conservation Laws and Spacetimes with Limited Regularity
P.G. LeFloch ................................................................. 679

Arbitrary Lagrangian–Eulerian (ALE) Method in Cylindrical Coordinates for Laser Plasma Simulations
M. Kucharik, R. Liska, R. Loubere, and M. Shashkov .................. 687

Numerical Aspects of Parabolic Regularization for Resonant Hyperbolic Balance Laws
M. Kraft and M. Lukáčová-Medviďová .................................. 695

Three-Dimensional Adaptive Central Schemes on Unstructured Staggered Grids
A. Madrane ........................................................................ 703

High Amplitude Solutions for Small Data in Pairs of Conservation Laws that Change Type
V. Matos and D. Marchesin .................................................. 711

Asymptotic Behavior of Riemann Problem with Structure for Hyperbolic Dissipative Systems
A. Mentrelli and T. Ruggeri ................................................... 721

Maximal Entropy Solutions for a Scalar Conservation Law with Discontinuous Flux
S. Mishra ............................................................................ 731

Semidiscrete Entropy Satisfying Approximate Riemann Solvers and Application to the Suliciu Relaxation Approximation
T. Morales and F. Bouchut ...................................................... 739

On the $L^2$-Well Posedness of an Initial Boundary Value Problem for the Linear Elasticity in Two and Three Space Dimensions
A. Morando and D. Serre ...................................................... 747

Intersections Modeling with a Class of “Second-Order” Models for Vehicular Traffic Flow
M. Herty, S. Moutari, and M. Raschle ....................................... 755

Some Contributions About an Implicit Discretization of a 1D Inviscid Model for River Flows
A. Bermúdez de Castro, R. Muñoz-Sola, C. Rodríguez,
and M. Ángel Vilar ............................................................ 765
Remarks on the Nonhomogeneous Oseen Problem Arising from Modeling of the Fluid Around a Rotating Body
S. Kráčmar, S. Nečasová, and P. Penel .................. 775

Multi-D Bony Type Potential for the Boltzmann–Enskog Equation
S.-Y. Ha and S.E. Noh .................................. 783

Convergence of Well-Balanced Schemes for the Initial Boundary Value Problem for Scalar Conservation Laws in 1D
M. Nolte and D. Kröner ................................ 791

Stability for Multidimensional Periodic Waves Near Zero Frequency
M. Oh and K. Zumbrun .................................. 799

Existence of Strong Traces for Quasisolutions of Scalar Conservation Laws
E.Y. Panov .................................................. 807

Path-Conservative Numerical Schemes for Nonconservative Hyperbolic Systems
C. Parés ..................................................... 817

Numerical Modeling of Two-Phase Gravitational Granular Flows with Bottom Topography
M. Pelanti, F. Bouchut, A. Mangeney, and J.-P. Vilotte .......... 825

Linear Lagrangian Systems of Conservation Laws
Y.-J. Peng ................................................... 833

Normal Modes Analysis of Subsonic Phase Boundaries in Elastic Materials
H. Freistühler and R.G. Plaza ............................. 841

Large Time Step Positivity-Preserving Method for Multiphase Flows
F. Coquel, Q.-L. Nguyen, M. Postel, and Q.-H. Tran .......... 849

Velocity Discretization in Numerical Schemes for BGK Equations
A. Alaia, S. Pieraccini, and G. Puppo ........................ 857

A Space–Time Conservative Method for Hyperbolic Systems of Relaxation Type
S. Qamar and G. Warnecke ................................ 865
A Numerical Scheme Based on Multipeakons for Conservative Solutions of the Camassa–Holm Equation
H. Holden and X. Raynaud ................................................ 873

Consistency of the Explicit Roe Scheme for Low Mach Number Flows in Exterior Domains
F. Rieper and G. Bader ..................................................... 883

Weak and Classical Solutions for a Model Problem in Radiation Hydrodynamics
C. Rohde, N. Tiemann, and W.-A. Yong .................................. 891

Spectral Analysis of Coupled Hyperbolic–Parabolic Systems on Finite and Infinite Intervals
J. Rottmann-Matthes .......................................................... 901

Toward an Improved Capture of Stiff Detonation Waves
O. Rouch, M.-O. St-Hilaire, and P. Arminjon ........................ 911

Generalized Momenta of Mass and Their Applications to the Flow of Compressible Fluid
O. Rozanova ....................................................................... 919

ADER–Runge–Kutta Schemes for Conservation Laws in One Space Dimension
G. Russo, E.F. Toro, and V.A. Titarev ...................................... 929

Strong Boundary Traces and Well-Posedness for Scalar Conservation Laws with Dissipative Boundary Conditions
B. Andreianov and K. Sbihi ................................................... 937

A Relaxation Method for the Coupling of Systems of Conservation Laws
A. Ambroso, C. Chalons, F. Coquel, E. Godlewski, F. Lagoutière,
P.-A. Raviart, and N. Seguin ................................................ 947

Increasing Efficiency Through Optimal RK Time Integration of Diffusion Equations
F. Cavalli, G. Naldi, G. Puppo, and M. Semplice ......................... 955

Numerical Simulation of Relativistic Flows Described by a General Equation of State
S. Serna ............................................................................ 963

On Delta-Shocks and Singular Shocks
V.M. Shelkovich .................................................................. 971
