Contents

1 Planetary Systems .......................................................... 1
  1.1 Introduction .......................................................... 1
  1.2 The Plurality of Worlds: A Question as Old as the Hills .......... 1
    1.2.1 From Antiquity to the Copernican Revolution .......... 1
    1.2.2 The First Theories on the Formation of the World ....... 3
  1.3 First Searches for Other Worlds .................................. 5
    1.3.1 The First Astrometric Searches .......................... 6
    1.3.2 The Velocimetry Method ................................. 6
    1.3.3 The First Results and the Problems Raised ............ 9
    1.3.4 Planets Around Pulsars .................................. 10
    1.3.5 The Search for Protoplanetary Disks ..................... 12
    1.4.1 The Sun as an Average Star ............................ 14
    1.4.2 Brown Dwarfs: Between Stars and Planets ............... 15
    1.4.3 A Specific Planetary System: The Solar System ........ 15
    1.4.4 The Formation of the Planets by Nucleation .......... 15
    1.4.5 Terrestrial and Giant Planets ........................... 18
Bibliography ................................................................. 20

2 Detection Methods .......................................................... 21
  2.1 The Extent of the Problem ....................................... 21
    2.1.1 Contrast Between Star and Planet ....................... 21
    2.1.2 Angular Separation Between the Objects ............... 22
    2.1.3 Environment of the Earth and Exoplanets ............ 23
  2.2 The Indirect Detection of Exoplanets ............................ 24
    2.2.1 The Effect of a Planet on the Motion of Its Star ....... 24
    2.2.2 The Effect a Planet has on Photometry of Its Star .... 36
    2.2.3 Comparison of the Different Indirect Methods ........ 46
  2.3 Direct Detection of Exoplanets ................................... 46
    2.3.1 Choice of Spectral Region ............................. 47
    2.3.2 Coronagraphic Methods and Adaptive Optics ............ 48

5.1.3 Collapse of a Molecular Cloud .......................... 136
5.1.4 Observation of Young Stars ................................. 136

5.2 Structure and Evolution of Protoplanetary Disks ............... 139
5.2.1 Observation of Protoplanetary Disks ........................ 139
5.2.2 Stellar Accretion Flux ..................................... 142
5.2.3 The Rotation of T-Tauri Stars ............................... 143
5.2.4 The Formation of Binary Systems ............................ 144
5.2.5 The Principal Stages of Star Formation ....................... 145
5.2.6 Later Stages of Stellar Evolution: Evolution Towards the Main Sequence .......................... 149
5.2.7 The Structure of Protoplanetary Disks ....................... 151
5.2.8 Composition of the Gas and Dust ............................. 155

5.3 Planetary Disks and Debris Disks .................................. 156
5.3.1 Observation of the Disk of HR 4796A ......................... 157
5.3.2 Observation of the Disk of β Pic ............................ 158

5.4 The Formation of Planetesimals and Planetary Embryos ........... 161
5.4.1 From Microscopic Particles to Centimetre-Sized Grains 161
5.4.2 From Centimetre-Sized Grains to Kilometre-Sized Bodies 162
5.4.3 From Protoplanets to Planets ................................ 163

Bibliography .......................................................... 165

6 The Dynamics of Planetary Systems .................................. 169
6.1 Characteristics of the Orbits ....................................... 169
6.1.1 Calculation of Radial Velocities ............................... 169
6.1.2 Orbital Characteristics from Radial-Velocity Curves ......... 170
6.1.3 Multiple Systems Case ....................................... 172
6.1.4 Exoplanets and Known Multiple Systems ...................... 173
6.1.5 Rotation of the Planets ....................................... 176

6.2 Migration ........................................................... 177
6.2.1 Migration in the Solar System ................................ 177
6.2.2 Migration in Exosystems ...................................... 179
6.2.3 The Different Migration Mechanisms .......................... 180
6.2.4 Observational Indications .................................... 182
6.2.5 The End of the Migration and Tidal Effects ................. 184

6.3 Stability of Planetary Systems .................................... 185
6.3.1 Dynamical Categories ........................................ 185
6.3.2 The GJ 876 System ........................................... 187
6.3.3 The HD 82943 System ......................................... 188
6.3.4 The ν Andromedae System .................................... 188
6.3.5 The HD 202206 System: A Circumbinary Planet? ........... 189
6.3.6 The HD 69830 System: Three Neptunes and a Ring of Dust 191

6.4 Planetary Systems Around Pulsars .................................. 191

6.5 The Dynamics of Debris Disks ..................................... 193

Bibliography .......................................................... 196
Structure and Evolution of an Exoplanet ........................................... 197
  7.1 The Internal Structure of Giant Exoplanets ............................... 198
     7.1.1 The Observable Features ........................................... 198
     7.1.2 The Equations of Internal Structure ............................... 199
     7.1.3 Rotation Effects .................................................. 201
     7.1.4 Equations of State ................................................. 201
     7.1.5 Construction of Models of Internal Structure ...................... 203
     7.1.6 Evolutionary Models ............................................... 206
  7.2 The Internal Structure of Terrestrial-Type Exoplanets and Ocean Planets ......................................................... 208
     7.2.1 Terrestrial-Type Exoplanets ....................................... 209
     7.2.2 Ocean Planets ......................................................... 211
  7.3 The Atmospheres of Exoplanets: Their Structure, Evolution and Spectral Characteristics ............................................ 214
     7.3.1 Giant Exoplanets ..................................................... 214
     7.3.2 Terrestrial Planets and Habitable Planets ......................... 225
     7.3.3 Hot Neptunes, Super-Earths, and Ocean Planets ................. 239
Bibliography ................................................................. 242

Present and Future Instrumental Projects .................................. 245
  8.1 Indirect Methods of Detection ............................................ 246
     8.1.1 Velocimetry ......................................................... 246
     8.1.2 Astrometry ............................................................ 250
     8.1.3 The Study of Planetary Transits ................................ 255
     8.1.4 Searching for Microlensing Events ............................... 266
  8.2 Direct Methods of Detection ............................................. 270
     8.2.1 Imaging ............................................................... 270
     8.2.2 Interferometry ....................................................... 279
     8.2.3 Direct Detection of Radio Waves ................................ 288
Bibliography ................................................................. 291

The Search for Life in Planetary Systems .................................. 293
  9.1 What is Life? ............................................................. 293
     9.1.1 How Should Life be Defined? ..................................... 293
     9.1.2 The Role of Carbon and of Liquid Water ......................... 294
     9.1.3 The Building-Block of Life: Macromolecules ..................... 296
     9.1.4 Nucleic Acids ......................................................... 297
     9.1.5 The Role of the Cell ............................................... 298
  9.2 Prebiotic Material in the Universe ...................................... 299
     9.2.1 Organic Material in the Universe ................................. 299
     9.2.2 The Synthesis of Organic Molecules: Miller and Urey’s Experiment .................. 301
     9.2.3 Transport of Complex Organic Molecules to the Primordial Earth .................. 303
  9.3 Stages on the Road to Complexity ...................................... 306
9.3.1 Polymers and Macromolecules .............................. 306
9.3.2 The Formation of Membranes .............................. 307
9.3.3 RNA and DNA ........................................... 307
9.4 The Appearance of Life on the Primitive Earth .......... 308
9.4.1 Favourable Conditions .................................. 308
9.4.2 The Environment of the Primitive Earth: The Hydrosphere and Atmosphere ........................................... 309
9.5 The Search for Habitable Locations in the Solar System ... 311
9.5.1 The Planet Mars ........................................... 311
9.5.2 The Satellites of the Outer Planets ......................... 315
9.6 The Search for Life on Exoplanets ............................ 319
9.6.1 Exoplanets’ Habitable Zones .............................. 319
9.6.2 How May Life on an Exoplanet be Detected? .............. 321
9.7 The Search for Extraterrestrial Civilisations ................. 324
9.7.1 The Drake and Sagan Equation ............................ 324
9.7.2 Communication by Radio Waves .......................... 325
9.7.3 The State of SETI and CETI Searches .................... 325
Bibliography ................................................................ 327

Appendix A .......................................................... 329
A.1 Star or Planet? .................................................. 329
A.2 Gravitation and Kepler’s Laws ................................. 330
A.3 Black-Body Emission – Planck’s Radiation Law – Stefan’s Law .... 330
A.4 The Hertzsprung-Russell Diagram and the Spectral Classification of Stars .................................................. 332
A.5 Resonances ..................................................... 334

Index ......................................................................... 337
Planetary Systems
Detection, Formation and Habitability of Extrasolar Planets
Olivier, M.; Encrenaz, T.; Roques, F.; Selsis, F.; Casoli, F.
2009, XIII, 344 p., Hardcover
ISBN: 978-3-540-75747-4
