1 Review of Computational Intelligence for Gene-Gene and Gene-Environment Interactions in Disease Mapping	
<i>Arpad Kelemen, Yulan Liang and Athanasios Vasilakos</i>	1
1.1 Introduction	1
1.2 Computational challenges in genomic association study of common complex diseases	3
1.3 The promise of computational intelligence	3
1.4 Computational intelligence approaches for SNP-disease associations ...	7
1.5 Conclusions	11
References	11
2 Intelligent Approaches to Mining the Primary Research Literature: Techniques, Systems, and Examples	
<i>Gully A.P.C. Burns, Donghui Feng, Eduard Hovy</i>	17
2.1 Introduction	17
2.2 A framework for conceptual biology	19
2.3 Partitioning the literature - the notion of ‘experimental type’	23
2.4 Related Work: Biomedical Knowledge Bases based on published studies	25
2.5 Practical applications: ‘Research Synthesis’	28
2.6 An Example Experiment Type: ‘Tract-Tracing Experiments’	30
2.7 Methodology	33
The overall challenge, from text to knowledge	33
Information extraction techniques: from Patterns to Conditional Random Fields	34
Stage 1: Corpus Processing	37
Stage 2: The basic text processing and feature definition	38
Stage 3: Evaluating the results	39
2.8 Results	40
2.9 Conclusions	42
2.10 Acknowledgements	43
References	43

3 Intuitionistic Fuzzy Set: Application to Medical Image Segmentation	
<i>Tamalika Chaira, Tridib Chaira</i>	51
3.1 Introduction	52
3.2 Related work in medical informatics	54
3.3 Prelimineries on intuitionistic fuzzy set	56
3.4 Use of intuitionistic fuzzy set theory in medical informatics - segmentation	57
3.4.1 Edge detection	57
3.4.2 Calculation of membership, non-membership degree and intuitionistic fuzzy index	60
3.4.3 Application of intuitionistic fuzzy set theory in image thresholding	61
3.5 The proposed method	63
3.6 Results and Discussion	65
3.7 Conclusions	67
References	67
4 Decomposable Aggregability in Population Genetics and Evolutionary Computations: Algorithms and Computational Complexity	
<i>Vladik Kreinovich, Max Shpak</i>	69
4.1 What is Aggregability	69
<i>Comment.</i>	71
4.2 Exact Aggregability: A Simple Example	71
4.3 Detecting Aggregability is Important	73
4.4 What We Do in This Chapter	74
<i>Comment.</i>	74
.....	75
4.5 First Theoretical Result: Detecting Decomposable Aggregability Is NP-Hard	76
<i>Comment.</i>	76
.....	76
<i>Comment.</i>	77
<i>Comments.</i>	77
4.6 Approximate Aggregability: Possible Definitions	78
<i>Comment.</i>	80
4.7 Second Theoretical Result: Detecting Approximate Decomposable Aggregability Is Also NP-Hard	80
<i>Comment.</i>	81
4.8 Once We Find the Partition, Finding the Combinations is Feasible	81
4.8.1 Algorithm	81
<i>Comment.</i>	81
4.8.2 Calculating aggregate dynamics	82
4.8.3 Example	82
4.8.4 What to Do in the Case of Approximate Aggregation	82
4.9 Proofs	83

4.9.1	Proof of Theorem 1	83
	‘‘If’’ part.	84
	‘‘Only if’’ part.	84
4.9.2	Proof of Theorem 2	86
4.10	Conclusions	90
	References	91

5 Evolutionary Learning of Neural Structures for Visuo-Motor Control

Nils T Siebel, Gerald Sommer, Yohannes Kassahun

5.1	Introduction	93
5.1.1	Current Practice	94
5.1.2	Problems and Biology-inspired Solutions	94
5.2	Problem Formulation and Related Work	96
5.2.1	Visuo-Motor Control	96
5.2.2	Related Work: Visuo-Motor Control	98
5.3	Developing Neural Networks with EANT	99
5.3.1	EANT’s Encoding of Neural Networks: The Linear Genome ..	99
5.3.2	Initialisation of the EANT Population of Networks	101
5.3.3	Structural Exploration: Search for Optimal Structures	101
5.3.4	Structural Exploitation: Search for Optimal Parameters	103
5.3.5	Related Work: Evolving Neural Networks	104
5.4	Combining EANT with CMA-ES	105
5.4.1	Motivation	105
5.4.2	Improving the convergence with CMA-ES	105
5.5	Experimental Evaluation	108
5.5.1	Experimental Setup	108
5.5.2	Parameter Sets	108
	Original EANT	109
	CMA-ES EANT, many fevals	109
	CMA-ES EANT, few fevals	109
5.5.3	Training and Testing	110
5.5.4	Results	110
5.5.5	Discussion	111
5.6	Conclusions	112
	References	113

6 Dimension reduction for performing discriminant analysis for microarrays

Sang Hee Lee, A. K. Singh, and Laxmi P Gewali

6.1	Introduction	117
6.2	Methodology	118
6.3	Results	123
6.4	Conclusion and Recommendations	127
	References	129

7 Auxiliary tool for the identification of genetic coding sequences in eukaryotic organisms

<i>Vincenzo De Roberto Junior Nelson F. F. Ebecken, Elias Restum Antonio</i>	133
7.1 Introduction	133
7.2 The main gene finding programs	134
7.3 Data characteristics	137
7.3.1 Data volume	137
7.3.2 Information consistency	138
7.3.3 Stored information	138
7.3.4 Database format	138
7.4 Accuracy measures	139
7.4.1 Nucleotide level	139
7.4.2 Exon level	139
7.5 Gene model	141
7.5.1 Data selection	142
7.5.2 The model for the discovery of coding areas	142
7.6 ExonBR system	144
7.7 Results and conclusion	147
References	148

8 Language engineering and information theoretic methods in protein sequence similarity studies

<i>A. Bogan-Marta, A. Hategan, I. Pitas</i>	151
8.1 Introduction	151
8.2 A survey of language engineering and information theoretic methods for protein sequence similarity	154
8.2.1 Protein sequence similarity based on linguistic techniques	155
Similarity due to regions as index terms in information retrieval	155
Semantic similarity measures	156
Language techniques for protein sequence relations	158
8.2.2 Sequence similarity based on information theoretic methods	160
8.3 Statistical language modeling method for sequence similarity	163
8.3.1 Theoretical concepts	163
8.3.2 Method description	165
8.3.3 Protein similarity search	165
.	165
.	166
8.3.4 Experimental results	166
8.3.5 Discussions	168
8.4 Protein similarity detection based on lossless compression of protein sequences	168
8.4.1 Theoretical concepts	169
8.4.2 ProtComp algorithm and its use in sequence comparison	169
8.4.3 Experimental results	173
8.4.4 Discussions	175

8.5	Conclusions	176
	References	178
9 Gene Expression Imputation Techniques for Robust Post Genomic Knowledge Discovery		
	<i>Muhammad Shoaib Sehgal, Iqbal Gondal and Laurence Dooley</i>	185
9.1	Introduction	185
9.2	Missing Values Estimation Methods	187
9.2.1	Imputation Nomenclature	187
9.2.2	Zero and Average Based Imputation [17]	189
9.2.3	Singular Value Decomposition Based Imputation (SVDImpute) [12]	189
9.2.4	K-Nearest Neighbour (KNN) Estimation [12]	190
9.2.5	Least Square Impute (LSImpute) [13]	191
9.2.6	Local Least Square Impute (LLSImpute) [10]	191
9.2.7	Bayesian Principal Component Analysis based Estimation (BPCA) [6]	192
9.2.8	Collateral Missing Value Estimation (CMVE) [14]	192
9.3	Post Genomic Knowledge Discovery Methods	194
9.3.1	Gene Selection	195
9.3.2	Gene Regulatory Network Reconstruction	195
9.3.3	Statistical Significance Test	196
9.4	Analysis and Discussion of Results	196
9.5	Software Availability	203
9.6	Conclusions	203
	References	203
10 Computational Modelling Strategies for Gene Regulatory Network Reconstruction		
	<i>Muhammad Shoaib Sehgal, Iqbal Gondal and Laurence Dooley</i>	207
10.1	Introduction	207
10.2	Pair Wise GRN Reconstruction Methods	210
	Correlation and Distance Functions	211
	Mutual Information	211
	Local Shape Based Similarity	212
10.3	Deterministic Methods for GRN Inference	213
	Differential Equations	213
	Boolean GRN Modelling Methods	213

11 Integration of Brain-Gene Ontology and Simulation Systems for Learning, Modelling and Discovery

Nik Kasabov, Vishal Jain, Lubica Benuskova, Paulo C. M. Gottgroy and Frances Joseph 221

11.1	Introduction	221
11.2	Evolving Implementation of BGO in Protégé	223
11.3	New Discoveries with BGO	225
11.4	BGO for Teaching	231
11.5	Conclusions and Future Directions	231
11.6	Acknowledgments	233
	References	233

12 Efficiency and Scalability Issues in Metric Access Methods

Vlastislav Dohnal, Claudio Gennaro, Pavel Zezula 235

12.1	The Metric Space Approach	236
	12.1.1 Metric Spaces in Bioinformatics	236
	12.1.2 Software Tools	238
12.2	Centralized Metric Access Methods	239
	12.2.1 Metric Tree Family	239
	12.2.2 Hash-based Similarity Indexing	241
	12.2.3 Performance Trials	241
12.3	Exploiting Multiple Computational Resources	243
	12.3.1 Parallel Similarity Searching	244
	12.3.2 Centralized Coordination	244
	Metric Grid	244
	12.3.3 Scalable and Distributed Search Structures	245
	Native Metric Search Structures	246
	Metric Content Addressable Network	248
	Metric Chord	250
12.4	Experience from Performance Trials	251
	12.4.1 Performance Tuning	254
12.5	Conclusions	257
	References	259

13 Computational Modelling of the Biomechanics of Epithelial and Mesenchymal Cell Interactions During Morphological Development

Jiří Kroc 265

13.1	Introduction	265
13.2	Introduction to Cell and Tissue Biology	268
13.3	Overview of Morphological Development of Tooth Resulting from Interaction of Epithelium and Mesenchyme	269
13.4	Simplifications used in model of morphological growth	271
13.5	Model	273
	13.5.1 Three inter-dependent parts of the model	273
	13.5.2 Mechanical interaction of epithelium and mesenchyme	274

13.5.3	Tissue growth	278
13.5.4	Implementation of diffusion by two computational sub-steps ..	279
13.5.5	Signalling, switching and cell differentiation	280
13.6	Results and Discussions	281
13.7	Future development	291
13.8	Conclusions	292

14 Artificial Chemistry and Molecular Darwinian Evolution of DNA/RNA-Like Systems I - Typogenetics and Chemostat

	<i>Marian Bobrik, Vladimir Kvasnicka, Jiri Pospichal</i>	295
14.1	Introduction	295
14.2	Eigen Theory of Molecular Replicators	298
14.2.1	Replicators and Molecular Darwinian Evolution	301
14.2.2	Artificial Chemistry and a Metaphor of Chemostat	303
14.2.3	Summary	306
14.3	Hofstadter's Theory of DNA-Like Molecules, Typogenetics	307
14.3.1	Basic Principles of Typogenetics	309
14.3.2	An Expression of Strands by Enzymes	310
14.3.3	Replicators	314
14.3.4	Hypercycles	319
14.3.5	Summary	321
14.4	Folding of RNA-Like Molecules that are Represented by Binary Strings	321
14.4.1	Chemostat Simulation of Molecular Darwinian Evolution	330
14.4.2	Summary	332
	References	334

15 Artificial Chemistry and Molecular Darwinian Evolution of DNA/RNA-Like Systems II – Programmable folding

	<i>Marian Bobrik, Vladimir Kvasnicka, Jiri Pospichal</i>	337
15.1	Programmable Folding of RNA-Like Molecules	337
15.2	Source of the Instruction Set	338
15.3	Architecture of Programmable RNA System	342
15.4	Comparison with the Instruction Based System	347
15.5	Replicator Evolution by Artificial Selection	348
15.5.1	The behavior of the System	350
15.5.2	String Splitting	354
15.6	The Chemostat	358
15.6.1	Perfectly Mixed Chemostat	360
15.6.2	Chemostat with Spatial Structure	360
15.6.3	Replicator Spatial Structures	362
15.6.4	The Mechanism of Resistance against Parasites	366
15.7	Conclusions	371
	References	372
