**Content**

1 Monitoring of Intracranial Pressure (ICP): A Review .......... 1
1.1 Normal Intracranial Pressure Values ............................................. 2
1.2 Regional Differences in Intracranial Pressure ............................. 2
1.2.1 Animal Studies ........................................................................... 2
1.2.2 Human Studies ........................................................................... 3
1.3 Pressure/Volume Relationship ...................................................... 3
1.4 Pressure Waves .............................................................................. 4
1.5 Critical Levels of Intracranial Pressure ........................................ 5
1.5.1 Experimental Studies ................................................................. 6
1.5.2 Human Studies ........................................................................... 6
1.6 Intracranial Pressure: Impact on Mortality ................................. 7
1.7 Intracranial Pressure After Intracranial Surgery ......................... 7
1.8 Approaches to Control of Intracranial Hypertension .................. 7
1.9 Control of Cerebral Blood Volume and Intracranial Pressure .......... 8
1.9.1 Head Elevation ........................................................................... 8
1.9.2 Reverse Trendelenburg Position .................................................. 9
1.9.3 Head Flexion, Rotation and Tilting .............................................. 9
1.9.4 Central Venous Pressure, Intraabdominal Pressure and Body Position ................................................................. 10
1.9.5 Endotracheal Suction and Tracheotomy .................................... 10
1.10 Positive End-Expiratory Pressure and Continuous Positive Airway Pressure ................................................................. 11
1.11 Dihydroergotamine (DHE) ............................................................. 12
1.12 The Lund Model ........................................................................... 13
1.13 Hyperventilation (HV) ................................................................. 13
1.13.1 Cerebral Blood Flow, Cerebral Blood Volume and Intracranial Pressure ................................................................. 14
1.13.2 Steal and Inverse Steal Phenomenon ....................................... 14
1.13.3 Bohr Effect ............................................................................... 15
1.13.4 Risk of Ischaemia .................................................................... 16
1.13.5 Adaptation to Prolonged Hyperventilation ............................... 17
1.13.6 Hyperventilation in Premature, Neonates and Paediatric Patients ................................................................. 18
1.13.7 Hyperventilation as a Lifesaving Procedure ............................ 19
