

# Contents

<b>Introduction</b> .....	1
<b>1 Linear differential systems with parameter excitation</b> .....	9
1.1 The model .....	10
1.2 Spherical coordinates for linear systems .....	12
1.3 The Multiplicative Ergodic Theorem: Lyapunov exponents ...	20
1.4 The deterministic case: Lyapunov exponents for asymptotically constant linear systems .....	28
1.5 Sample systems .....	44
<b>2 Locality and time scales of the underlying non-degenerate stochastic system: Freidlin-Wentzell theory</b> .....	53
2.1 Preliminaries and assumptions .....	55
2.2 The limiting distribution (stationary measure) .....	60
2.3 The large deviations principle .....	68
2.4 Exit probabilities for non-degenerate systems .....	72
2.5 Sublimiting distributions: Metastability and quasi-deterministic behavior .....	91
2.6 Sample systems .....	108
<b>3 Exit probabilities for degenerate systems</b> .....	125
3.1 Exit probabilities for degenerate systems depending on a small parameter .....	126
3.2 Uniform consequence for the exit probability .....	140
<b>4 Local Lyapunov exponents</b> .....	143
4.1 Local Lyapunov exponents: upper and lower bound .....	144
4.2 The local growth rate of the determinant .....	156
4.3 Local Lyapunov exponents in the diagonal case .....	157

4.4	Local Lyapunov exponents in the two-dimensional, general case.....	177
4.4.1	Qualitative theory of nonlinear real noise systems on time scales.....	178
4.4.2	The local Lyapunov exponent.....	186
4.5	Concluding remarks.....	226
<b>Notations</b> .....		231
<b>Bibliography</b> .....		239
<b>Index</b> .....		253
