Contents

Chapter 1 Wind-Blown Sand Environment ................................. 1
  1.1 Desert and Desertification ................................................. 1
    1.1.1 Desert ................................................................. 1
    1.1.2 Desertification ..................................................... 4
  1.2 Harms of Wind-Blown Sand Environment ......................... 6
    1.2.1 Wind Erosion ..................................................... 7
    1.2.2 Sand (Dust) Storm ............................................... 8
  1.3 Examples: Dunhuang, Minqin, Maqu ............................... 12
    1.3.1 Dunhuang ......................................................... 12
    1.3.2 Minqin ............................................................. 14
    1.3.3 Maqu ................................................................. 16

Chapter 2 Flows of the Near-Surface Boundary Layer .............. 19
  2.1 An Introduction to Fluid Mechanics .............................. 19
    2.1.1 Viscosity of a Fluid ............................................. 20
    2.1.2 Properties of Flow ............................................. 20
  2.2 Basic Equations of Fluid Mechanics .............................. 22
    2.2.1 Conservation of Mass (Continuity Equation) ............. 23
    2.2.2 Conservation of Momentum ................................... 23
    2.2.3 Conservation of Energy ....................................... 24
    2.2.4 Basic Equations of Turbulence .............................. 25
    2.2.5 Models of Turbulence .......................................... 25
    2.2.6 Approaches of Turbulent Numerical Simulation ........ 27
  2.3 Basic Characteristics of the Atmospheric Boundary Layer .... 28
  2.4 Observations of the Atmosphere Boundary Layer .............. 32
  2.5 Basic Equations of the Atmospheric Boundary Layer ........ 38
    2.5.1 Basic Equations .................................................. 38
    2.5.2 Aerodynamic Roughness ...................................... 41
    2.5.3 Characteristics of the Flow Field on the Wind-Blown Sand Boundary Layer ........................................ 42
    2.5.4 Effect of Sand Dunes on the Flow Field .................. 44
  2.6 Wind Gusts near the Earth’s Surface .............................. 46
    2.6.1 Analysis of the Wind Gusts ................................. 47
Chapter 3 Sand Motion near the Sand Bed Surface ......................... 61
  3.1 Threshold Wind Velocity for Sand Motion ................................. 62
    3.1.1 Mechanism of the Entrainment of Sand Particles .................... 62
    3.1.2 Threshold Wind Velocity of Sand Motion .............................. 63
    3.1.3 Factors Affecting the Threshold Wind Velocity ...................... 65
  3.2 Experimental Research on the Lift-off of Sand Particles .......... 67
    3.2.1 Experiments on Particle-Bed Collision with ‘Artificial’ Sand ................................................................. 67
    3.2.2 Measurements of the Linear Velocities of Lift-off Particles .... 68
    3.2.3 Measurement of the Angular Velocities of Saltating Particles ... 72
  3.3 Stochastic Model of Particle-Bed Collision ............................... 76
    3.3.1 Stochastic Model ................................................................ 76
    3.3.2 Soft-Particle Approach for Collision Process ..................... 79
    3.3.3 Hard-Particle Approach for Collision Process .................... 81
    3.3.4 Analytical Solution of Lift-off Velocity ............................. 84
  3.4 Probability Distribution of Lift-off Velocities ......................... 86
  3.5 Splash Function ......................................................................... 94
    3.5.1 Splash Function for ‘Uniform’ Sands ................................... 94
    3.5.2 Splash Function for ‘Mixed’ Sands .................................... 98

Chapter 4 Wind-Blown Sand Electrification ................................. 105
  4.1 Charged Sand Particles and their Charging Mechanisms .......... 106
    4.1.1 Observations and Measurements ....................................... 106
    4.1.2 Charging Mechanisms of Sand Particles .............................. 109
  4.2 Measurements of Wind-Blown Sand Electric Field .................... 111
    4.2.1 Atmospheric Electric Field ............................................. 111
    4.2.2 Field Observation of Wind-Blown Sand Electric Field ........... 112
    4.2.3 Wind Tunnel Measurement of Wind-Blown Sand Electric Field ........................................................... 115
  4.3 Theoretical Calculation of Wind-Blown Sand Electric Field ...... 120
    4.3.1 Electric Field Due to Sand Particles Moving in Air ............. 121
    4.3.2 Electric Field Due to Sand Particles in Sand Bed ................ 122
    4.3.3 Total Electric Field Due to Charged Sand Particles in Wind-Blown Sand Flux ..................................................... 123
  4.4 Effects of Charged Sand Particles ............................................ 126
    4.4.1 Effects on the Entrainment of Sand Particles’ ..................... 126
    4.4.2 Effects on Electromagnetic Wave Propagation .................... 128
Chapter 5 Wind-Blown Sand Flux and its Prediction

5.1 Forces on Saltating Sand Particles
5.2 Sand Saltation
  5.2.1 The Effect of Wind-Blown Sand Electric Field on Sand Saltation
  5.2.2 The Effects of Particle’s Mid-Air Collisions on Sand Saltation Trajectories
  5.2.3 Saltation Trajectory and Saltation Activity in a Fluctuating Wind Field
  5.2.4 The Criterion of Saltation and Suspension
5.3 Experiments and Observations on Sand Transport Rate
5.4 Theoretical Simulations on the Evolution of Wind-Blown Sand Flux
5.5 Dust Devil

Chapter 6 Aeolian Geomorphology and its Simulation – Aeolian Sand Ripples

6.1 Observations of Aeolian Sand Ripples
  6.1.1 The Basic Characteristics of Aeolian Sand Ripples
  6.1.2 The Formation Mechanism of Aeolian Sand Ripples
6.2 Continuous Models for Aeolian Sand Ripples
  6.2.1 The Anderson’s Continuous Model
  6.2.2 The Granular Surface Flow Model
6.3 Discrete Models for Aeolian Sand Ripples
  6.3.1 Cellular Automata Model (Anderson-Bunas Discrete Model)
  6.3.2 Discrete Element Model (Landry-Werner Model)
  6.3.3 Coupled Mapping Lattice Model (Nishimori-Ouchi Model)
6.4 Discrete Particle Tracing Method (DPTM) Model
  6.4.1 Basic Method
  6.4.2 Major Simulation Results

Chapter 7 Aeolian Geomorphology and its Simulation – Aeolian Sand Dunes

7.1 Aeolian Sand Dunes and Observation Results
  7.1.1 Classification of Sand Dunes
  7.1.2 The Observation of Sand Dune Migration
  7.1.3 Observation on the Dynamical Behavior of Sand Dunes
  7.1.4 Influence Factors
7.2 Continuum Sand Dune Model
7.3 Simulation of Sand Dune Field ....................................................235
  7.3.1 Coupled Mapping Lattice Method.........................................235
  7.3.2 Cellular Automaton Method..................................................236
7.4 Numerical Simulation of Sand Dune Field..............................238
  7.4.1 Discrete Numerical Simulation of Sand Dune Field .............238
  7.4.2 Simulation Results.................................................................243

Chapter 8 Mechanical Analysis on the Efficiency of Sand
Prevention Methods.............................................................................261
  8.1 Sand Fence....................................................................................262
  8.2 Straw Checkerboard Barriers........................................................268
  8.3 The Mechanical Properties of Crust.............................................272
    8.3.1 The Survey on the Mechanical Properties of Crust..............274
    8.3.2 The Destruction of Saltating Sand to Crust..........................280

References...............................................................................................287
