# Contents

1 **Introduction** ................................................... 1  
   1.1 The Fascination of Locomotion ............................ 1  
   1.2 Biologically inspired Robotics ............................ 2  
   1.3 RoboCup .................................................. 4  
   1.4 Summary Remarks and a Diagram of the Book .............. 5  

2 **Mechanical Background** ........................................ 7  
   2.1 Modeling .................................................. 7  
   2.2 Kinematics of Multibody Systems .......................... 9  
      2.2.1 Kinematics of Rigid Bodies ......................... 9  
      2.2.2 Kinematics of Multibody Systems with Open-loop Structures 11  
      2.2.3 Holonomic and Non-Holonomic Constraints .......... 12  
   2.3 Dynamics of Multibody Systems ............................ 15  
      2.3.1 Synthetic Method ................................... 15  
      2.3.1.1 Principle of Linear Momentum ................. 15  
      2.3.1.2 Principle of Angular Momentum ................. 16  
      2.3.2 Analytical Method ................................ 19  
      2.3.2.1 D’ALEMBERT’s Principle .................... 19  
      2.3.2.2 LAGRANGE’s Equations of the 2nd Kind ....... 20  
      2.3.2.3 Multibody Systems with Additional Constraints 23  
      2.3.2.4 VORONETS’ Equations ....................... 25  
      2.3.2.5 APPELL’s Equations .......................... 27  
   2.4 Forces Related to Locomotion ............................... 29  
      2.4.1 Force of Gravity ................................... 29  
      2.4.2 Spring Force ....................................... 30  
      2.4.3 Friction Forces .................................... 33  
      2.4.3.1 General Notes ................................. 33  
      2.4.3.2 Viscous Friction Force ....................... 34  
      2.4.3.3 Dry Friction Force ........................... 36  
      2.4.3.4 An Approach of Mathematical Friction Modeling 41
3 Mathematical Methods and Elements of Control Theory ........... 47
  3.1 Modeling .......................................................... 47
  3.2 Analysis and Modification of the Model – the Role of an Experiment 48
  3.3 Mathematical Methods ............................................ 48
    3.3.1 Perturbation Methods ........................................ 48
    3.3.2 Stability of Stationary Motions ............................. 50
    3.3.3 Introduction of Dimensionless Variables and Method of Dimensions ........................................ 55
    3.3.4 Remarks on Numerical Methods ............................... 59
  3.4 Some Aspects from Control Theory ................................ 61
    3.4.1 Motivating Example and General Formulations .............. 61
    3.4.2 Open- and Closed-Loop Control ............................. 63
    3.4.3 Output Feedback ............................................... 64
      3.4.3.1 Introduction .............................................. 64
      3.4.3.2 Relative Degree .......................................... 65
      3.4.3.3 Minimum-Phase Condition and Invariant Zeros ........ 67
    3.4.4 Recapitulatory Example and High-Gain Control .............. 70

4 Wheeled Locomotion Systems – Rolling ............................... 73
  4.1 Rolling - the Exclusive Engineering Idea for Locomotion ........ 73
  4.2 Two-Wheel Planar Mobile Robot ................................... 75
    4.2.1 Two-Wheel Vehicle Model .................................... 76
    4.2.2 Kinematics ..................................................... 77
    4.2.3 Dynamics ....................................................... 78
      4.2.3.1 APPELL's Equations ..................................... 79
      4.2.3.2 LAGRANGE's Equations with Multipliers ............... 85
      4.2.3.3 VORONETS' Equations .................................. 87
      4.2.3.4 Synthetic Method – Basic Theorems of Dynamics ...... 88
    4.2.4 Analysis of the Equations of Motion ......................... 91
  4.3 The Three-Wheel RoboCup Player “Lukas” Utilizing
    Omnidirectional Wheels ............................................. 95
    4.3.1 Kinematics ..................................................... 95
    4.3.2 Dynamics ....................................................... 98
    4.3.3 Control of the RoboCup Player “Lukas” ..................... 102
      4.3.3.1 Velocity Control Loop .................................. 104
      4.3.3.2 Positioning “Lukas” .................................... 104
      4.3.3.3 High-Level Tasks ....................................... 105
  4.4 Non-Holonomic Mobile Robot ..................................... 106
    4.4.1 The Idea and Performance of the Mobile Robot ............ 106
    4.4.2 Mechanical Model of a Planar Four-Bar Mechanism with Wheels ........................................ 107
    4.4.3 Kinematics of the Mechanism ................................ 108
    4.4.4 Dynamics of the Mechanism ................................ 111
    4.4.5 Dynamic Simulations of the Locomotion of the Planar Four-Bar Mechanism with Wheels .................. 116
## 5 Walking Machines – Walking

### 5.1 Human Walking and Running: History and General Remarks

### 5.2 Dynamic Models of Walking

#### 5.2.1 Dynamics of Human Trunk Locomotion

#### 5.2.2 Dynamics of Extremities

##### 5.2.2.1 Introductory Remarks

##### 5.2.2.2 Mathematical and Physical Pendulum

##### 5.2.2.3 Double Pendulum

#### 5.2.3 Simplest Integrative Model of Walking – Inverted Pendulum

##### 5.2.3.1 Inverted Pendulum with Fixed Length

##### 5.2.3.2 Inverted Pendulum with Variable Length

##### 5.2.3.3 Inverted Double Pendulum

##### 5.2.3.4 Inverted Double Pendulum with a Rigid Body

#### 5.2.4 The Three-Body Model of Walking

##### 5.2.4.1 Kinetic Energy of the Upper Body

##### 5.2.4.2 Kinetic and Potential Energies of the Leg

##### 5.2.4.3 LAGRANGE’s Equations for the Three-Body Model

#### 5.2.5 Five-Body Model of a Walking Robot

##### 5.2.5.1 Kinetic Energy of a Lower Leg

##### 5.2.5.2 Potential Energy of the System and the Generalized Forces

##### 5.2.5.3 The Equations of Motion

### 5.3 Robustness and Adaptivity

### 5.4 Generalization – Scaling

## 6 Worm-like Locomotion Systems – Crawling

### 6.1 Modeling Worm-Like Locomotion Systems (WLLS)

### 6.2 Straight Discrete Worms with Contact via Spikes, [137]

#### 6.2.1 Kinematics

#### 6.2.2 Dynamics

#### 6.2.3 Geometric Interpretation of the Results

### 6.3 Straight Discrete Worms with Contact via Dry Friction

### 6.4 Worm-Like Locomotion based on Friction with Anisotropic Friction Coefficients

#### 6.4.1 System of Two Mass Points and a Kinematic Drive

#### 6.4.2 System of Two Mass Points with a Linear Elastic Element

##### 6.4.2.1 Mechanical Model and Equations with a Linear Elastic Element

##### 6.4.2.2 Application of the Averaging Method

##### 6.4.2.3 Stationary Regime

##### 6.4.2.4 Conditions of Stability
