-------------------------------------	---

Part I Challenges and Perspectives of Optimization in the Energy Industry

1 Current and Future Challenges for Production Planning Systems <i>Torben Franch, Max Scheidt and Günter Stock</i>	5
2 The Earth Warming Problem: Practical Modeling in Industrial Enterprises <i>Susumu Ikenouye</i>	19

Part II Deterministic Methods

3 Trading Hubs Construction for Electricity Markets <i>Pavel A. Borisovsky, Anton V. Eremeev, Egor B. Grinkevich, Sergey A. Klovov and Andrey V. Vinnikov</i>	29
4 A Decision Support System to Analyze the Influence of Distributed Generation in Energy Distribution Networks <i>J.N. Fidalgo, Dalila B.M.M. Fontes and Susana Silva</i>	59
5 New Effective Methods of Mathematical Programming and Their Applications to Energy Problems <i>Valerian P. Bulatov</i>	79
6 Improving Combustion Performance by Online Learning <i>Andrew Kusiak and Zhe Song</i>	131

7 Critical States of Nuclear Power Plant Reactors and Bilinear Modeling	
<i>Vitaliy A. Yatsenko, Panos M. Pardalos and Steffen Rebennack</i>	149
8 Mixed-Integer Optimization for Polygeneration Energy Systems Design	
<i>Pei Liu and Efstratios N. Pistikopoulos</i>	167
9 Optimization of the Design and Partial-Load Operation of Power Plants Using Mixed-Integer Nonlinear Programming	
<i>Marc Jüdes, Stefan Vigerske and George Tsatsaronis</i>	193
10 Optimally Running a Biomass-Based Energy Production Process	
<i>Maurizio Bruglieri and Leo Liberti</i>	221
11 Mathematical Modeling of Batch, Single Stage, Leach Bed Anaerobic Digestion of Organic Fraction of Municipal Solid Waste	
<i>Takwai E. Lai, Abhay K. Koppar, Pratap C. Pullammanappallil and William P. Clarke</i>	233
12 Spatially Differentiated Trade of Permits for Multipollutant Electric Power Supply Chains	
<i>Trisha Woolley, Anna Nagurney and John Stranlund</i>	277
13 Applications of TRUST-TECH Methodology in Optimal Power Flow of Power Systems	
<i>Hsiao-Dong Chiang, Bin Wang and Quan-Yuan Jiang</i>	297
<hr/>	
Part III Stochastic Programming: Methods and Applications	
<hr/>	
14 Scenario Tree Approximation and Risk Aversion Strategies for Stochastic Optimization of Electricity Production and Trading	
<i>Andreas Eichhorn, Holger Heitsch and Werner Römisch</i>	321
15 Optimization of Dispersed Energy Supply – Stochastic Programming with Recombining Scenario Trees	
<i>Alexa Epe, Christian Küchler, Werner Römisch, Stefan Vigerske, Hermann-Josef Wagner, Christoph Weber and Oliver Woll</i>	347
16 Stochastic Model of the German Electricity System	
<i>Nina Heitmann and Thomas Hamacher</i>	365

17 Optimization of Risk Management Problems in Generation and Trading Planning	
<i>Boris Blaesig and Hans-Jürgen Haubrich</i>	387
18 Optimization Methods Application to Optimal Power Flow in Electric Power Systems	
<i>Virginijus Radziukynas and Ingrida Radziukyniene</i>	409
19 WILMAR: A Stochastic Programming Tool to Analyze the Large-Scale Integration of Wind Energy	
<i>Christoph Weber, Peter Meibom, Rüdiger Barth and Heike Brand</i>	437
<hr/>	
Part IV Stochastic Programming in Pricing	
<hr/>	
20 Clean Valuation with Regard to EU Emission Trading	
<i>Karl Frauendorfer and Jens Güssow</i>	461
21 Efficient Stochastic Programming Techniques for Electricity Swing Options	
<i>Marc C. Steinbach and Hans-Joachim Vollbrecht</i>	485
22 Delta-Hedging a Hydropower Plant Using Stochastic Programming	
<i>Stein-Erik Fleten and Stein W. Wallace</i>	507
Index	525
