**Braids and Knots** ....................................................... 1
Patrick D. Bangert

1 Physical Knots and Braids: A History and Overview ............ 2
2 Braids and the Braid Group ........................................ 4
   2.1 The Topological Idea .......................................... 4
   2.2 The Origin of Braid Theory .................................. 5
   2.3 The Topological Braid ....................................... 9
   2.4 The Braid Group ............................................ 12
   2.5 Other Presentations of the Braid Group .................... 16
   2.6 The Alexander and Jones Polynomials ...................... 18
   2.7 Properties of the Braid Group ............................... 21
   2.8 Algorithmic Problems in the Braid Groups ................. 22
3 Braids and Knots ..................................................... 24
   3.1 Notation for Knots .......................................... 24
   3.2 Braids to Knots ............................................ 28
   3.3 Example: The Torus Knots .................................. 28
   3.4 Knots to Braids I: The Vogel Method ....................... 29
   3.5 Knots to Braids II: An Axis for the Universal Polyhedron . 31
   3.6 Peripheral Group Systems of Closed Braids ................ 39
4 Classification of Braids and Knots .................................. 45
   4.1 The Word Problem I: Garside’s Solution ................... 45
   4.2 The Word Problem II: Rewriting Systems .................. 47
   4.3 The Conjugacy Problem I: Garside’s Solution ............ 53
   4.4 The Conjugacy Problem II: Rewriting Systems ............ 54
   4.5 Markov’s Theorem ........................................... 59
   4.6 The Minimal Word Problem .................................. 62
5 Open Problems ....................................................... 69
References ................................................................. 70
## Contents

2.2 Geodesics on Lie Groups ........................................ 143
2.3 Geodesic Description for Various Equations .................. 144
3 Euler Equations on Groups as Hamiltonian Systems and the
    Binormal Equation ............................................. 144
    3.1 Hamiltonian Reformulation of the Euler Equations ........ 144
    3.2 Hamiltonian Structure of the Landau-Lifschitz Equation ... 145
    3.3 Properties of the Binormal Equation ...................... 147
4 The KdV-Type Equations as Euler Equations .................... 149
    4.1 The Virasoro Algebra and the KdV Equation .............. 149
    4.2 Similar Equations and Conservation Laws ................. 151
5 Hamiltonian Structure of the Euler Equations
   for an Incompressible Fluid .................................. 152
   5.1 The Euler Hydrodynamics as a Hamiltonian Equation ....... 152
   5.2 The Space of Knots and the Dual of the Lie Algebra of
       Divergence-Free Vector Fields ........................... 155
References ................................................................... 156

### Singularities in Fluid Dynamics and their Resolution ....... 159
H.K. Moffatt (CIME Lecturer)
1 Introduction ....................................................... 159
2 Boundary-Driven Singularities .................................. 160
3 Cusp Singularities at a Free Surface ......................... 162
4 A Simple Finite-Time Singularity: the Euler Disk ........... 163
5 Finite-Time Singularities at Interior Points .................. 165
References ................................................................... 168

### Structural Complexity and Dynamical Systems ............. 169
Renzo L. Ricca (School Director and CIME Lecturer)
1 Introduction ....................................................... 169
2 Helmholtz’s Work on Vortex Motion: Birth of Topological Fluid
    Mechanics .......................................................... 170
    2.1 Multi-Valued Potentials in Multiply Connected Regions ... 170
    2.2 Green’s Theorem in Multiply Connected Regions .......... 174
    2.3 Conservation Laws ............................................ 175
3 Measures of Structural Complexity .............................. 175
    3.1 Dynamical Systems and Vector Field Analysis ............ 176
    3.2 Measures of Tangle Complexity ............................. 177
4 Topological Bounds on Energy and Helicity-Crossing Number
    Relations for Magnetic Knots and Links ..................... 184
    4.1 Topology Bounds Energy in Ideal Fluid ................... 185
    4.2 Helicity-Crossing Number Relations in Dissipative Fluid ... 187
References ................................................................... 187
