Part II Rheology and Modeling
M. Suery and H. Atkinson

5 Introduction and Definitions for Rheology and Modeling .............. 43

6 Experimental Determination of Rheological Behavior ............... 45
   6.1 Partially Solidified Alloys ................................................. 45
       6.1.1 Experimental Methods ........................................ 45
       6.1.2 Results Concerning Viscosity ........................................ 48
       6.1.3 Results on Fluidity ............................................. 56
   6.2 Partially Remelted Alloys ............................................... 56
       6.2.1 Experimental Methods ........................................ 56
       6.2.2 Results in Terms of Apparent Viscosity ....................... 60
       6.2.3 Results in Terms of Constitutive Behavior .................. 65
   6.3 Comparison Between Partially Solidified and Partially Remelted Alloys ............................................. 66
   6.4 Yield Stress ............................................................. 67
   6.5 Concluding Remarks ................................................... 68

7 Modeling of Semisolid Processing ........................................ 71
   7.1 Introductory Remarks on Modeling .................................... 71
   7.2 Utility of Modeling ..................................................... 74
   7.3 Use of the Structural Parameter λ for Modeling: Model of Brown and Coworkers ............................................. 75
   7.4 Use of a Yield Stress in Models ........................................ 76
   7.5 Finite Difference Modeling ............................................ 77
       7.5.1 One-phase Finite Difference Modeling ....................... 77
       7.5.2 Two-phase Finite Difference Modeling ....................... 84
   7.6 Finite Element Modeling ............................................... 84
       7.6.1 One-phase Finite Element Modeling ....................... 84
       7.6.2 Two-phase Finite Element Modeling ....................... 92
   7.7 Models akin to Forging Models ........................................ 96
       7.7.1 Viscoplastic Constitutive Models ....................... 96
       7.7.2 Model Based on Viscoelasticity and Thixotropy ........... 96
   7.8 Micromodeling .......................................................... 97
   7.9 Concluding Remarks on Modeling ..................................... 99

8 General Conclusions on Rheology and Modeling ....................... 101
References for Part II Rheology and Modeling ............................. 103
### Contents

**Part III  Industrial Applications of Semisolid Processing**  
Ken Young and Plato Kapranos

9  **Introduction to Industrial Applications of Semisolid Processing**  
109

10  **Raw Material**

10.1 Semisolid Material Delivery Systems  
10.2 Vertical Induction Slug Heating  
10.3 Horizontal Induction Slug Heating  
10.4 Horizontal Convection Slug Heating  
10.5 Reheating of Solid Feedstock  
10.6 Direct Slurry Production: Rheocasting/Thixomoulding

- 10.6.1 New Rheo-Casting Route
- 10.6.2 Semisolid Rheocasting

10.7 Other Slurry Based systems  

- 10.7.1 “Semisolid” Slugs from Slurry
- 10.7.2 Direct Slurry Forming
- 10.7.3 Thixomoulding
- 10.7.4 Rheo-Die casting Process

11  **Process Control in Die Filling and Die Design**

11.1 Die Temperature Control Systems  
11.2 Parts Selection for Formability Evaluation  
11.3 Injection System Evaluation  
11.4 Fill Test Observations  
11.5 Venting and Vacuum Assist  
11.6 Runner, Gate Design and Injection Forces  
11.7 Surface Quality  
11.8 Summary of General Process Issues

- 11.8.1 Raw Materials
- 11.8.2 Alloy Selection

12  **Component Design Rules**

12.1 Tolerances  
12.2 Part Design Rules  
12.3 Dimensioning  
12.4 Cost Reductions in Product Design

13  **Practical Applications in Use Today**

14  **The Future**
