Contents

1. Introduction  
1.1 A Survey of Semiconductors .......................................................... 2  
1.1.1 Elemental Semiconductors ......................................................... 2  
1.1.2 Binary Compounds ................................................................. 2  
1.1.3 Oxides ...................................................................................... 3  
1.1.4 Layered Semiconductors ............................................................ 3  
1.1.5 Organic Semiconductors ............................................................. 4  
1.1.6 Magnetic Semiconductors ........................................................... 4  
1.1.7 Other Miscellaneous Semiconductors ........................................... 4  
1.2 Growth Techniques ........................................................................ 5  
1.2.1 Czochralski Method ................................................................. 5  
1.2.2 Bridgman Method ..................................................................... 6  
1.2.3 Chemical Vapor Deposition ....................................................... 7  
1.2.4 Molecular Beam Epitaxy ............................................................ 8  
1.2.5 Fabrication of Self-Organized Quantum Dots by the Stranski–Krastanow Growth Method .............. 11  
1.2.6 Liquid Phase Epitaxy ................................................................. 13  
Summary .............................................................................................. 14  
Periodic Table of “Semiconductor-Forming” Elements ......................... 15

2. Electronic Band Structures ................................................................. 17  
2.1 Quantum Mechanics ................................................................. 18  
2.2 Translational Symmetry and Brillouin Zones ................................ 20  
2.3 A Pedestrian’s Guide to Group Theory ........................................... 25  
2.3.1 Definitions and Notations ......................................................... 25  
2.3.2 Symmetry Operations of the Diamond and Zinc-Blende Structures ............................................. 30  
2.3.3 Representations and Character Tables ..................................... 32  
2.3.4 Some Applications of Character Tables .................................. 40  
2.4 Empty Lattice or Nearly Free Electron Energy Bands ................. 48  
2.4.1 Nearly Free Electron Band Structure in a Zinc-Blende Crystal ................................................. 48  
2.4.2 Nearly Free Electron Energy Bands in Diamond Crystals ........ 52  
2.5 Band Structure Calculations by Pseudopotential Methods .......... 58  
2.5.1 Pseudopotential Form Factors in Zinc-Blende- and Diamond-Type Semiconductors .................. 61  
2.5.2 Empirical and Self-Consistent Pseudopotential Methods .......... 66
2.6 The $k\cdot p$ Method of Band-Structure Calculations .......................... 68
  2.6.1 Effective Mass of a Nondegenerate Band
    Using the $k\cdot p$ Method ........................................... 69
  2.6.2 Band Dispersion near a Degenerate Extremum:
    Top Valence Bands in Diamond-
    and Zinc-Blende-Type Semiconductors ......................... 71

2.7 Tight-Binding or LCAO Approach to the Band Structure
    of Semiconductors ..................................................... 83
  2.7.1 Molecular Orbitals and Overlap Parameters ................. 83
  2.7.2 Band Structure of Group-IV Elements
    by the Tight-Binding Method ................................. 87
  2.7.3 Overlap Parameters and Nearest-Neighbor Distances ... 94

Problems ........................................................................... 96

Summary ................................................................. 105

3. Vibrational Properties of Semiconductors,
    and Electron–Phonon Interactions ................................. 107
  3.1 Phonon Dispersion Curves of Semiconductors ............... 110
  3.2 Models for Calculating Phonon Dispersion Curves
    of Semiconductors ....................................................... 114
    3.2.1 Force Constant Models ......................................... 114
    3.2.2 Shell Model ......................................................... 114
    3.2.3 Bond Models ....................................................... 115
    3.2.4 Bond Charge Models .......................................... 117
  3.3 Electron–Phonon Interactions ...................................... 121
    3.3.1 Strain Tensor and Deformation Potentials ............. 122
    3.3.2 Electron–Acoustic-Phonon Interaction
      at Degenerate Bands .............................................. 127
    3.3.3 Piezoelectric Electron–Acoustic-Phonon Interaction .... 130
    3.3.4 Electron–Optical-Phonon
      Deformation Potential Interactions ......................... 131
    3.3.5 Fröhlich Interaction .......................................... 133
    3.3.6 Interaction Between Electrons and Large-Wavevector
      Phonons: Intervalley Electron–Phonon Interaction ....... 135

Problems ................................................................. 137

Summary ................................................................. 158

4. Electronic Properties of Defects ................................. 159
  4.1 Classification of Defects .............................................. 160
  4.2 Shallow or Hydrogenic Impurities ............................... 161
    4.2.1 Effective Mass Approximation .............................. 162
    4.2.2 Hydrogenic or Shallow Donors .......................... 166
    4.2.3 Donors Associated with Anisotropic Conduction Bands 171
    4.2.4 Acceptor Levels in Diamond-
      and Zinc-Blende-Type Semiconductors ...................... 174
  4.3 Deep Centers .......................................................... 180

8. Photoelectron Spectroscopy

8.1 Photoemission

8.1.1 Angle-Integrated Photoelectron Spectra of the Valence Bands

8.1.2 Angle-Resolved Photoelectron Spectra of the Valence Bands

8.1.3 Core Levels

8.2 Inverse Photoemission

8.3 Surface Effects

8.3.1 Surface States and Surface Reconstruction

8.3.2 Surface Energy Bands

8.3.3 Fermi Level Pinning and Space Charge Layers

Problems

Summary

9. Effect of Quantum Confinement on Electrons and Phonons in Semiconductors

9.1 Quantum Confinement and Density of States

9.2 Quantum Confinement of Electrons and Holes

9.2.1 Semiconductor Materials for Quantum Wells and Superlattices

9.2.2 Classification of Multiple Quantum Wells and Superlattices

9.2.3 Confinement of Energy Levels of Electrons and Holes

9.2.4 Some Experimental Results

9.3 Phonons in Superlattices

9.3.1 Phonons in Superlattices: Folded Acoustic and Confined Optic Modes

9.3.2 Folded Acoustic Modes: Macroscopic Treatment

9.3.3 Confined Optical Modes: Macroscopic Treatment

9.3.4 Electrostatic Effects in Polar Crystals: Interface Modes

9.4 Raman Spectra of Phonons in Semiconductor Superlattices

9.4.1 Raman Scattering by Folded Acoustic Phonons

9.4.2 Raman Scattering by Confined Optical Phonons

9.4.3 Raman Scattering by Interface Modes

9.4.4 Macroscopic Models of Electron–LO Phonon (Frohlich) Interaction in Multiple Quantum Wells

9.5 Electrical Transport: Resonant Tunneling

9.5.1 Resonant Tunneling Through a Double-Barrier Quantum Well

9.5.2 I–V Characteristics of Resonant Tunneling Devices

9.6 Quantum Hall Effects in Two-Dimensional Electron Gases

9.6.1 Landau Theory of Diamagnetism in a Three-Dimensional Free Electron Gas

9.6.2 Magneto-Conductivity of a Two-Dimensional Electron Gas: Filling Factor

**Appendix A: Pioneers of Semiconductor Physics Remember…**

- Ultra-Pure Germanium: From Applied to Basic Research or an Old Semiconductor Offering New Opportunities
  By *Eugene E. Haller*                                                                  555
- Two Pseudopotential Methods: Empirical and Ab Initio
  By *Marvin L. Cohen*                                                                 558
- The Early Stages of Band-Structures Physics and Its Struggles for a Place in the Sun
  By *Conyers Herring*                                                                560
- Cyclotron Resonance and Structure of Conduction and Valence Band Edges in Silicon and Germanium
  By *Charles Kittel*                                                                 563
- Optical Properties of Amorphous Semiconductors and Solar Cells
  By *Jan Tauc*                                                                        566
- Optical Spectroscopy of Shallow Impurity Centers
  By *Elias Burstein*                                                                 569
- On the Prehistory of Angular Resolved Photoemission
  By *Neville V. Smith*                                                                574
- The Discovery and Very Basics of the Quantum Hall Effect
  By *Klaus von Klitzing*                                                               576
- The Birth of the Semiconductor Superlattice
  By *Leo Esaki*                                                                       578

**Appendix B: Solutions to Some of the Problems**                                         583

**Appendix C: Recent Development**                                                        673

**Appendix D: Recent Developments and References**                                        687

**References**                                                                            719

**Subject Index**                                                                         755
