## Contents

1 **Introduction** ................................................................. 1  
  1.1 Challenges of Grid Programming ................................. 2  
  1.2 The Role of Middleware for the Grid ......................... 5  
  1.3 Communication Technologies for Distributed Computing ......... 7  
    1.3.1 Java Remote Method Invocation (RMI) .................. 7  
    1.3.2 Common Object Request Broker Architecture (CORBA) .... 9  
    1.3.3 Containers for Components & Services .................. 10  
  1.4 Shortcomings in State-Of-The-Art Grid Middleware .......... 16  
    1.4.1 Responsibilities of the Middleware User ............... 16  
    1.4.2 Requirements for the Software Components .............. 17  

2 **HOCs: Software Components for Grid Programming** ............... 19  
  2.1 Higher-Order Components (HOCs) ................................ 20  
    2.1.1 Motivation for HOCs ........................................ 21  
    2.1.2 Grid Programming Using HOCs ............................ 22  
    2.1.3 Introducing Code Mobility to the Middleware ........... 24  
    2.1.4 Polymorphism and Type Checking for Code Parameters .... 26  
    2.1.5 First Application Case Study: Julia Sets ............... 30  
  2.2 HOCs and Grid Middleware ......................................... 31  
    2.2.1 An Analysis of the Requirements of the Grid Platform  
        without Components ........................................ 31  
    2.2.2 Bridging Middleware and Application with HOCs ........ 36  
    2.2.3 Case Study Revisited: Using the Farm-HOC ............. 38  
    2.2.4 Performance Experiments on a Wide-Area Testbed ....... 40  
    2.2.5 HOCs and Hand-Written Code: A Performance Comparison . 41  
  2.3 APIs for Grid Application Programming with HOCs ............ 42  
  2.4 Adaptability of HOCs ................................................. 51  
    2.4.1 Code Parameters for Adaptation .......................... 52  
    2.4.2 Case Study: From Farm to Wavefront .................... 53  
  2.5 Discussion: Adaptation vs. AOP ................................... 60
## 3 Higher-Order Component Service Architecture (HOC-SA)  
3.1 Service-Oriented Grid Programming Using the HOC-SA  
  3.1.1 How Code Mobility Works: HOC-SA Code Service & Remote Code Loader  
  3.1.2 Parameter Databases in the HOC-SA  
3.2 HOCs and Web Services  
  3.2.1 Web Services  
  3.2.2 Components and Resources  
  3.2.3 The HOC-SA Component Repository  
  3.2.4 The HOC-SA Portal  
3.3 A Comparison of the HOC-SA and Globus WS-GRAM  
  3.3.1 Grid Programming with WS-GRAM and the HOC-SA  
  3.3.2 Application Types for HOC-SA and WS-GRAM  
  3.3.3 Response Times: HOC-SA vs. WS-GRAM  
3.4 MPI, Skeletons and Web Services: Integrating Grid Technologies  
  3.4.1 A Gateway for Bridging between Web Services and MPI  
  3.4.2 Example: Discrete Wavelet Transform (DWT)  
  3.4.3 Wavelet Transform in General  
  3.4.4 DWT for Image Processing  
  3.4.5 DWT on the Grid Using the Lifting-HOC  
  3.4.6 Portable Parameters for the Lifting-HOC  
  3.4.7 An Adaptation of the Lifting-HOC  
  3.4.8 Experimental Performance Evaluation  
  3.4.9 Discussion: Interoperability and Portable Code  
3.5 A HOC-SA Based Map/Reduce Implementation  
  3.5.1 Cloud Computing Technologies for the HOC-SA  
  3.5.2 MapReduce and Hadoop  
  3.5.3 HOC-SA Features for Map/Reduce on the Grid  
3.6 Summary of HOC-SA Features

## 4 Applications of Higher-Order Components  
4.1 Clayworks: A Collaborative Simulation Environment  
  4.1.1 The 3-tier Architecture of Clayworks  
  4.1.2 The Deformation-HOC for Parallel Simulations  
4.2 Protein Sequence Analysis with HOCs  
  4.2.1 The Alignment Problem in Bioinformatics  
  4.2.2 Circular Permutations of DNA  
  4.2.3 The Alignment-HOC and its Code Parameters  
  4.2.4 Using an Alternative Traceback  
  4.2.5 Optimizations of the Alignment-HOC  
  4.2.6 Experiments with the Alignment-HOC  
4.3 Conclusions from Using HOCs in Large-Scale applications
## 5 HOCs with Embedded Scheduling and Loop Parallelization

5.1 User-Transparent Grid Scheduling .......................... 132
  5.1.1 The KOALA Grid Scheduling Infrastructure .......... 133
  5.1.2 Extensions of KOALA for User-Transparent Scheduling .. 135
  5.1.3 Integrating KOALA & HOC-SA ......................... 136
  5.1.4 A HOC-Aware Scheduling Algorithm ...................... 138
  5.1.5 HOC Scheduling Cost-Functions ......................... 138
  5.1.6 Scheduling Large-Scale Applications ..................... 140
  5.1.7 Experiments with HOCs and KOALA ....................... 141
  5.1.8 Conclusions from the Scheduling Experiments .......... 144

5.2 Parallelization of Code Parameters in HOCs .............. 144
  5.2.1 The Internal Compute Farm of the LooPo-HOC ............. 145
  5.2.2 Transforming Loop Nests into Task Graphs ............... 146
  5.2.3 Integrating Loop Parallelization with the Grid .......... 148
  5.2.4 Case Study: The SOR Equation System Solver .......... 150
  5.2.5 Experiments ......................................... 152

5.3 Combining HOCs with Related technologies: ProActive, SOFA and the GCM ................. 153
  5.3.1 Combining HOCs with ProActive, the GCM and SOFA ....... 155
  5.3.2 Creation of Web Services Using ProActive ............... 158

5.4 Discussion: HOCs and Different Tools for Distributed Computing . 159

## 6 Conclusions and Related Work

6.1 New Contributions ........................................... 161

6.2 Related Work ............................................... 162
  6.2.1 The Real-Time Framework (RTF) ......................... 163
  6.2.2 A Survey of Related Component Models ................. 164
  6.2.3 The Skeleton Model .................................... 164
  6.2.4 CCA: The Common Component Architecture ............... 165
  6.2.5 CCM: The CORBA Component Model ....................... 166
  6.2.6 Java Servlets and JSPs .................................. 166
  6.2.7 Enterprise Java Beans and .NET Components .......... 166
  6.2.8 The Web 2.0 ........................................ 168
  6.2.9 The Semantic Web ..................................... 168

6.3 Future Work ............................................... 169

Higher-Order Components for Grid Programming
Making Grids More Usable
Dünnweber, J.; Gorlatch, S.
2009, XIII, 186 p., Hardcover
ISBN: 978-3-642-00840-5
