## Part I An Overview

---

<b>1</b>	<b>Basic Principles Summarized</b> .....	3
1.1	The Atomic Idea: From Elementary Particles to Solids .....	4
1.2	Permanent (i.e., Equilibrium) Structures of Matter Correspond to the Minimum of Their (Free) Energy .....	6
1.3	Condensed Matter Tends to Collapse Under the Influence of Coulomb Potential Energy .....	9
1.4	Quantum Kinetic Energy Counterbalances Coulomb Potential Energy Leading to Stable Equilibrium Structures ..	10
1.4.1	Heisenberg's Uncertainty Principle and the Minimum Kinetic Energy .....	10
1.4.2	Pauli's Exclusion Principle and the Enhancement of the Minimum Kinetic Energy .....	11
1.4.3	Schrödinger's Spectral Discreteness and the Rigidity of the Ground State .....	14
1.5	Dimensional Analysis .....	15
1.6	Key Points .....	18
1.7	Questions and Problems .....	19
<b>2</b>	<b>Basic Principles in Action</b> .....	21
2.1	Size and Energy Scale of Atoms .....	21
2.2	Why do Atoms Come Together to Form Molecules and Solids? .....	23
2.3	Ionic Motion: Small Oscillations .....	27
2.4	Why do the Specific Heats of Solids go to Zero as $T \rightarrow 0\text{ K}$ ? ..	29
2.5	When is Classical Mechanics Adequate? .....	31

2.6	Estimating Magnitudes Through Dimensional Analysis . . . . .	32
2.6.1	Atomic Radius, $R_\alpha$ . . . . .	32
2.6.2	Volume per Atom, $\nu_a \equiv \mathbf{V}/\mathbf{N}_a$ , in Solids . . . . .	32
2.6.3	Mass Density, $\rho_M$ . . . . .	33
2.6.4	Cohesive Energy, $U_c$ . . . . .	33
2.6.5	Bulk Modulus, $B$ , and Shear Modulus, $\mu_s$ . . . . .	34
2.6.6	Sound Velocities in Solids, $c_0$ , $c_\ell$ , $c_t$ . . . . .	35
2.6.7	Maximum Angular Frequency of Atomic Vibrations in Solids, $\omega_{\max}$ . . . . .	37
2.6.8	Melting Temperature, $T_m$ . . . . .	37
2.6.9	DC Electrical Resistivity, $\rho_e$ . . . . .	38
2.7	Key Points . . . . .	41
2.8	Questions and Problems . . . . .	42
<b>3</b>	<b>A First Acquaintance with Condensed Matter . . . . .</b>	<b>47</b>
3.1	Various Kinds of Condensed Matter . . . . .	47
3.1.1	Monocrystalline and Polycrystalline Atomic Solids . .	48
3.1.2	Atomic or Ionic Compounds and Alloys . . . . .	49
3.1.3	Molecular Solids . . . . .	49
3.1.4	Glasses . . . . .	49
3.1.5	Polymers . . . . .	50
3.1.6	Colloids . . . . .	50
3.1.7	Gels . . . . .	51
3.1.8	Liquid Crystals . . . . .	51
3.1.9	Self-Assembled Soft Matter . . . . .	51
3.1.10	Artificial Structures . . . . .	52
3.1.11	Clusters and Other Finite Systems . . . . .	52
3.2	Bonding Types and Resulting Properties . . . . .	53
3.2.1	Simple Metals . . . . .	54
3.2.2	Transition Metals and Rare Earths . . . . .	55
3.2.3	Covalent Solids . . . . .	55
3.2.4	Ionic Solids . . . . .	56
3.2.5	Van der Waals Bonded Solids . . . . .	57
3.2.6	Hydrogen Bonded Solids . . . . .	58
3.3	A Short Introduction to Crystal Structures . . . . .	59
3.3.1	Some Basic Definitions . . . . .	59
3.3.2	Unit and Primitive Cells of Some Commonly Occurring 3-D Crystal Structures . . . . .	64
3.3.3	Systems and Types of 3D Bravais Lattices . . . . .	67
3.3.4	Crystal Planes and Miller Indices . . . . .	67
3.4	Bloch Theorem, Reciprocal Lattice, Bragg Planes, and Brillouin Zones . . . . .	70
3.4.1	Bloch Theorem . . . . .	70
3.4.2	Reciprocal Lattice . . . . .	72

3.4.3	Bragg Planes . . . . .	75
3.4.4	Brillouin Zones . . . . .	75
3.5	Key Points . . . . .	77
3.6	Questions and Problems . . . . .	78

**Part II Two Simple Models for Solids**

<b>4</b>	<b>The Jellium Model and Metals I: Equilibrium Properties . .</b>	<b>83</b>
4.1	Introduction . . . . .	84
4.2	Electronic Eigenfunctions, Eigenenergies, Number of States . .	86
4.3	Kinetic and Potential Energy, Pressures, and Elastic Moduli . . . . .	90
4.4	Acoustic Waves are the Ionic Eigenoscillations in the JM . . . .	97
4.5	Thermodynamic Quantities . . . . .	101
4.5.1	General Formulas . . . . .	101
4.5.2	Specific Heat, $C_V$ . . . . .	104
4.5.3	Bulk Thermal Expansion Coefficient . . . . .	107
4.6	Key Points . . . . .	107
4.7	Problems . . . . .	108
<b>5</b>	<b>The Jellium Model and Metals II: Response to External Perturbations . . . . .</b>	<b>113</b>
5.1	Response to Electric Field . . . . .	113
5.2	The Dielectric Function . . . . .	114
5.3	Static Electrical Conductivity . . . . .	120
5.4	Phonon Contribution to Resistivity . . . . .	123
5.5	Response in the Presence of a Static Uniform Magnetic Field . . . . .	127
5.5.1	Magnetic Resonances . . . . .	128
5.5.2	Hall Effect and Magnetoresistance . . . . .	131
5.5.3	Magnetic Susceptibility, $\chi_m$ . . . . .	133
5.6	Thermoelectric Response . . . . .	140
5.7	Key Points . . . . .	143
5.8	Problems . . . . .	145
<b>6</b>	<b>Solids as Supergiant Molecules: LCAO . . . . .</b>	<b>149</b>
6.1	Diversion: The Coupled Pendulums Model . . . . .	149
6.2	Introductory Remarks Regarding the LCAO Method . . . . .	152
6.3	A Single Band One-Dimensional Elemental “Metal” . . . . .	153
6.4	One-Dimensional Ionic “Solid” . . . . .	157
6.5	One-Dimensional Molecular “Solid” . . . . .	160
6.6	Diversion: Eigenoscillations in One-Dimensional “solid” with two Atoms Per Primitive Cell . . . . .	163
6.7	One-Dimensional Elemental $sp^1$ “Semiconductor” . . . . .	164

6.8	One-Dimensional Compound $sp^1$ “Semiconductor”	171
6.9	Key Points	174
6.10	Problems	174
<b>7</b>	<b>Semiconductors and Other Tetravalent Solids</b>	<b>177</b>
7.1	Lattice Structures: A Reminder	177
7.2	Band Edges and Gap	178
7.3	Differences Between the 1-D and the 3-D Case and Energy Diagrams	181
7.4	Metals, Semiconductors, and Ionic Insulators	183
7.5	Holes	184
7.6	Effective Masses and DOS	186
7.7	Dielectric Function and Optical Absorption	188
7.8	Effective Hamiltonian	189
7.9	Impurity Levels	191
	7.9.1 Impurity Levels: The General Picture	191
	7.9.2 Impurity Levels: Doping	192
7.10	Concentration of Electrons and Holes at Temperature $T$	195
	7.10.1 Intrinsic case	197
	7.10.2 Extrinsic case	197
7.11	Band Structure and Electronic DOS	198
7.12	Eigenfrequencies, Phononic DOS, and Dielectric Function	200
7.13	Key Points	207
7.14	Problems	208
<b>8</b>	<b>Beyond the Jellium and the LCAO: An Outline</b>	<b>211</b>
8.1	Introductory Remarks	211
8.2	The Four Basic Approximations	212
8.3	Density Functional Theory	215
8.4	Outline of an Advanced Scheme for Calculating the Properties of Solids	219
8.5	Beyond the Four Basic Approximations	221
	8.5.1 Periodicity Broken or Absent	223
	8.5.2 Electron–Electron Correlations, Quasi-Particles, Magnetic Phases, and Superconductivity	235
	8.5.3 Electron–Phonon Interactions, Transport Properties, Superconductivity, and Polarons	237
	8.5.4 Phonon–Phonon Interactions, Thermal Expansion, Melting, Structural Phase Transitions, Solitons, Breathers	238
	8.5.5 Disorder and Many Body Effects in Coexistence	239
	8.5.6 Quantum Informatics and Solid State Systems	240
8.6	Key Points	240
8.7	Problems	241

---

**Part III More About Periodicity & its Consequences**

---

<b>9</b>	<b>Crystal Structure and Ionic Vibrations</b> . . . . .	245
9.1	Experimental Determination of Crystal Structures . . . . .	245
9.2	Determination of the Frequency vs. Wavevector . . . . .	251
9.3	Theoretical Calculation of the Phonon Dispersion Relation . . . . .	256
9.4	The Debye–Waller Factor and the Inelastic Cross-Section . . . . .	263
9.5	Key Points . . . . .	268
9.6	Problems . . . . .	269
<b>10</b>	<b>Electrons in Periodic Media. The Role of Magnetic Field</b> . . . . .	273
10.1	Introduction . . . . .	273
10.2	Dispersion Relations, Surfaces of Constant Energy, and DOS: A Reminder . . . . .	274
10.3	Effective Hamiltonian and Semiclassical Approximation . . . . .	276
10.4	Semiclassical Trajectories in the Presence of a Magnetic Field . . . . .	280
10.5	Two Simple but Elucidating TB Models . . . . .	281
10.6	Cyclotron Resonance and the de Haas–van Alphen Effect . . . . .	287
10.7	Hall Effect and Magnetoresistance . . . . .	290
10.8	Key Points . . . . .	298
10.9	Problems . . . . .	299
<b>11</b>	<b>Methods for Calculating the Band Structure</b> . . . . .	301
11.1	Introductory Remarks . . . . .	301
11.2	Ionic and Total Pseudopotentials . . . . .	303
11.3	Schrödinger Equation, Plane Wave Expansion, and Bloch’s Theorem . . . . .	309
11.4	Plane Waves and Perturbation Theory . . . . .	310
11.5	Muffin–Tin Potential . . . . .	313
11.6	Schrödinger Equation and the Augmented Plane Wave (APW) Method . . . . .	313
11.7	Schrödinger Equation and the Korringa–Kohn–Rostoker (KKR) Method . . . . .	315
11.8	The $k \cdot p$ Method of Band Structure Calculations . . . . .	317
11.9	Key Points . . . . .	321
11.10	Problems . . . . .	322
<b>12</b>	<b>Pseudopotentials in Action</b> . . . . .	325
12.1	The One-Dimensional Case . . . . .	325
12.2	The Two-Dimensional Square Lattice . . . . .	327
12.2.1	<i>Spaghetti</i> Diagrams . . . . .	327
12.2.2	Fermi Lines . . . . .	330
12.3	Harrison’s Construction . . . . .	336

12.4	Second-Order Correction to the Total JM Energy	337
12.5	Ionic Interactions in Real Space	338
12.6	Phononic Dispersions in Metals	340
12.7	Scattering by Phonons, Mean Free Path, and the Dimensionless Constant $\lambda$ in Metals	342
12.8	Key Points	345
12.9	Problems	346

---

## Part IV Materials

---

<b>13</b>	<b>Simple Metals and Semiconductors Revisited</b>	351
13.1	Band Structure and Fermi Surfaces of Simple Metals	351
13.1.1	Alkali Metals	351
13.1.2	Alkaline Earths: Be, Mg, Ca, Sr, Ba, and Ra	354
13.1.3	Trivalent Metals	354
13.1.4	Tetravalent Metals	358
13.2	Band Structure of Semiconductors	360
13.3	The Jones Zone and the Disappearance of the Fermi Surface	363
13.4	Mechanical Properties of Semiconductors	365
13.5	Magnetic Susceptibility of Semiconductors	368
13.6	Optical and Transport Properties of Semiconductors	371
13.6.1	Excitons	371
13.6.2	Conductivity and Mobility in Semiconductors	374
13.7	Silicon Dioxide ( $\text{SiO}_2$ )	378
13.8	Graphite and Graphene	380
13.9	Organic semiconductors	386
13.10	Key Points	388
13.11	Questions and Problems	389
<b>14</b>	<b>Closed-Shell Solids</b>	393
14.1	Van Der Waals Solids	393
14.2	Ionic Compounds I: Types and Crystal Structures	397
14.3	Ionic Compounds II: Mechanical Properties	399
14.4	Ionic Compounds III: Optical Properties	401
14.5	Key Points	406
14.6	Problems	407
<b>15</b>	<b>Transition Metals and Compounds</b>	409
15.1	Experimental Data for the Transition Metals	409
15.2	Calculations I: APW or KKR	412
15.3	Calculations II: LCAO	417
15.4	Calculations III: The Simple Friedel Model	421

15.5	Compounds of Transition Elements, I: Perovskites . . . . .	423
15.6	Compounds of Transition Elements, II: High $T_c$ Superconducting Materials . . . . .	426
15.7	Compounds of Transition Metals, III: Oxides, etc. . . . .	430
15.8	Key Points . . . . .	434
15.9	Problems . . . . .	435
<b>16</b>	<b>Artificial Periodic Structures . . . . .</b>	<b>437</b>
16.1	Semiconductor Superlattices . . . . .	437
16.2	Photonic Crystals: An Overview . . . . .	439
16.3	Photonic Crystals: Theoretical Considerations . . . . .	443
16.4	Phononic Crystals . . . . .	450
16.5	Left-Handed Metamaterials (LHMs) . . . . .	456
16.6	Designing, Fabricating, and Measuring LHMs . . . . .	461
16.7	Key Points . . . . .	466
16.8	Problems . . . . .	468

---

**Part V Deviations from Periodicity**

---

<b>17</b>	<b>Surfaces and Interfaces . . . . .</b>	<b>471</b>
17.1	Surface Preparation . . . . .	471
17.2	Relaxation and Reconstruction . . . . .	472
17.3	Surface States . . . . .	474
17.4	Work Function . . . . .	479
17.5	Measuring the Work Function . . . . .	481
17.6	The p–n Homojunction in Equilibrium . . . . .	483
17.7	The p–n Homojunction Under an External Voltage $V$ . . . . .	487
17.8	Some Applications of Interfaces . . . . .	491
17.9	Key Points . . . . .	494
17.10	Problems . . . . .	497
<b>18</b>	<b>Disordered and Other Nonperiodic Solids . . . . .</b>	<b>499</b>
18.1	Introductory Remarks . . . . .	499
18.2	Alloys and the Hume-Rothery Rule . . . . .	500
18.3	Glasses and other Amorphous Systems . . . . .	502
18.4	Distribution and Correlation Functions . . . . .	504
18.5	Quasi-Crystals . . . . .	506
18.6	Electron Transport and Quantum Interference . . . . .	510
18.7	Band Structure, Static Disorder, and Localization . . . . .	513
18.7.1	3D Case . . . . .	513
18.7.2	2D Case . . . . .	517
18.7.3	1D and quasi 1D Systems . . . . .	518

18.8	Calculation Techniques . . . . .	522
18.8.1	Coherent Potential Approximation . . . . .	522
18.8.2	Weak Localization due to Quantum Interference . . . . .	526
18.8.3	Scaling Approach . . . . .	529
18.8.4	Quasi-One-Dimensional Systems and Scaling . . . . .	532
18.8.5	Potential Well Analogy . . . . .	533
18.9	Quantum Hall Effect . . . . .	534
18.10	Key Points . . . . .	538
18.11	Problems . . . . .	540
<b>19</b>	<b>Finite Systems . . . . .</b>	<b>543</b>
19.1	Introduction . . . . .	543
19.2	Metallic Clusters . . . . .	544
19.3	Fullerenes . . . . .	545
19.4	C <sub>60</sub> -Based Solids . . . . .	549
19.5	Carbon Nanotubes . . . . .	551
19.6	Other Clusters . . . . .	556
19.7	Quantum Dots . . . . .	557
19.7.1	An Overview . . . . .	557
19.7.2	Optical Transitions . . . . .	558
19.7.3	QDs and Coulomb Blockade . . . . .	561
19.8	Key Points . . . . .	564
19.9	Problems . . . . .	565

---

## Part VI Correlated Systems

---

<b>20</b>	<b>Magnetic Materials, I: Phenomenology . . . . .</b>	<b>569</b>
20.1	Which Property Characterizes These Materials? . . . . .	569
20.2	Experimental Data for Ferromagnets . . . . .	573
20.2.1	Saturation Magnetization vs Temperature for Simple Ferromagnets . . . . .	573
20.2.2	Magnetic Susceptibility of Simple Ferromagnet for $T > T_c$ . . . . .	573
20.2.3	Saturation Magnetization vs Temperature for Ferrimagnets . . . . .	574
20.2.4	Magnetic Susceptibility of Ferrimagnets vs Temperature ( $T > T_c$ ) . . . . .	575
20.3	Experimental Data for Antiferromagnets . . . . .	576
20.3.1	Determination of the Antiferromagnetic Ordered Structure . . . . .	576
20.3.2	Magnetic Susceptibility vs Temperature . . . . .	577

20.4	Materials . . . . .	577
20.4.1	Simple Ferromagnetic Materials . . . . .	577
20.4.2	Ferrimagnetic Materials . . . . .	579
20.4.3	Antiferromagnetic Materials . . . . .	580
20.5	Thermodynamic Relations . . . . .	580
20.5.1	Thermodynamic Potentials . . . . .	580
20.5.2	Mean Field Approximation (Landau's Approach) . . . . .	583
20.5.3	Why are Magnetic Domains Formed? . . . . .	584
20.5.4	How Thick is the Bloch Wall? . . . . .	586
20.5.5	Examples of Magnetic Domains . . . . .	586
20.5.6	Thermodynamics of Antiferromagnets . . . . .	587
20.6	Spintronics . . . . .	588
20.7	Key Points . . . . .	592
20.8	Problems . . . . .	593
<b>21</b>	<b>Magnetic Materials II: Microscopic View . . . . .</b>	<b>595</b>
21.1	Introduction . . . . .	595
21.2	Jellium model and el-el Coulomb Repulsion . . . . .	599
21.2.1	Is There Ferromagnetic Order in the JM? . . . . .	599
21.2.2	Magnetic Susceptibility Within the JM in the Presence of Electron-Electron Interactions . . . . .	601
21.2.3	Is There Antiferromagnetic Order in the JM? . . . . .	603
21.3	The Hubbard Model . . . . .	607
21.4	The Heisenberg Model . . . . .	613
21.4.1	The Hamiltonian . . . . .	613
21.4.2	Mean Field Approximation . . . . .	615
21.4.3	The Ferromagnetic Case, ( $J_{ij} > 0$ ) and its spin waves . . . . .	617
21.4.4	The AF Case . . . . .	619
21.5	Key Points . . . . .	622
21.6	Problems . . . . .	624
<b>22</b>	<b>Superconductivity, I: Phenomenology . . . . .</b>	<b>625</b>
22.1	Materials . . . . .	625
22.2	Properties of Superconductors . . . . .	627
22.2.1	Zero DC Resistivity . . . . .	627
22.2.2	Expulsion of the Magnetic Field B from the Interior of a Superconductor . . . . .	627
22.2.3	Critical Value of the Magnetic Field Beyond Which Superconductivity Disappears . . . . .	629
22.2.4	Specific Heat and Other Thermodynamic Quantities . . . . .	632
22.2.5	Response to Microwave or Far Infrared EM Radiation . . . . .	634
22.2.6	Ultrasound Attenuation . . . . .	635

22.2.7	Tunneling Current in Metal/Insulator/ Superconductor Junctions . . . . .	635
22.2.8	Temperature Dependence of the Superconducting Gap . . . . .	635
22.2.9	Isotope Effect . . . . .	637
22.2.10	Relaxation Times for Nuclear Spin . . . . .	638
22.2.11	Thermoelectric Coefficients . . . . .	638
22.3	Thermodynamic Relations . . . . .	639
22.4	London Equation . . . . .	641
22.5	Pippard's Generalization . . . . .	644
22.6	Ginzburg–Landau Theory . . . . .	645
22.7	Quantization of the Magnetic Flux . . . . .	651
22.8	Key Points . . . . .	652
22.9	Problems . . . . .	654
<b>23</b>	<b>Superconductivity, II: Microscopic Theory . . . . .</b>	<b>655</b>
23.1	Electron–Electron Indirect Attraction . . . . .	655
23.2	Cooper Pairs . . . . .	657
23.3	Comments . . . . .	659
23.4	Corrected Binding Energy and the Critical Temperature . . . . .	661
23.5	Further Corrections to the Formula for $T_c$ . . . . .	663
23.6	The Bardeen–Cooper–Schrieffer (BCS) Theory . . . . .	664
23.7	Thermodynamic Quantities . . . . .	669
23.8	Response to Electromagnetic Fields . . . . .	672
23.9	Towards Material-Specific Calculations of Superconducting Quantities . . . . .	674
23.10	Josephson Effects and SQUID . . . . .	677
23.11	Key Points . . . . .	680
23.12	Problems . . . . .	682

**Part VII Appendices**

---

<b>A</b>	<b>Elements of Electrodynamics of Continuous Media . . . . .</b>	<b>685</b>
A.1	Field Vectors, Potentials, and Maxwell's Equations . . . . .	685
A.2	Relations Among the Fields . . . . .	688
<b>B</b>	<b>Elements of Quantum Mechanics . . . . .</b>	<b>697</b>
B.1	General Formalism . . . . .	697
B.2	Bra and Ket Notation . . . . .	700
B.3	Spherically Symmetric Potentials . . . . .	702
B.4	Perturbation Results . . . . .	708
B.5	Interaction of Matter with an External Electromagnetic Field . . . . .	711

<b>C</b>	<b>Elements of Thermodynamics and Statistical Mechanics</b> . . . . .	713
C.1	Thermodynamic Relations . . . . .	713
C.2	Basic Relations of Statistical Mechanics . . . . .	716
C.3	Non-Interacting Particles . . . . .	718
C.3.1	Non-Interacting Electrons . . . . .	718
C.3.2	Phonons . . . . .	721
<b>D</b>	<b>Dielectric Function, <math>\epsilon(\mathbf{k}, \omega)</math>: Formulas and Uses</b> . . . . .	723
D.1	Uses . . . . .	724
D.2	Expressions for $\epsilon(\mathbf{k}, \omega)$ within the JM . . . . .	728
D.3	Phenomenological Expressions for the Dielectric Function . . .	730
<b>E</b>	<b>Waves in Continuous Elastic Media</b> . . . . .	733
E.1	Strains . . . . .	733
E.2	Equations of Motion . . . . .	733
E.3	Connecting Stress and Strain . . . . .	734
E.4	The Elastic Wave Equation . . . . .	735
<b>F</b>	<b>The Method LCAO Applied to Molecules</b> . . . . .	737
F.1	Formulation of the LCAO Method . . . . .	737
F.2	Some Important Examples . . . . .	740
F.2.1	Covalent Diatomic Molecule . . . . .	740
F.2.2	Ionic Diatomic Molecule . . . . .	742
F.3	Hybridization of Atomic Orbitals . . . . .	743
F.3.1	$sp^1$ Hybrid Atomic Orbitals . . . . .	744
F.3.2	$sp^2$ Hybrid Atomic Orbitals . . . . .	748
F.3.3	$sp^3$ Hybrid Atomic Orbitals . . . . .	749
<b>G</b>	<b>Boltzmann's Equation</b> . . . . .	755
<b>H</b>	<b>Tables</b> . . . . .	759
	<b>Solutions of Selected Problems and Answers</b> . . . . .	779
	<b>General Reading</b> . . . . .	826
	<b>References</b> . . . . .	837
	<b>Index</b> . . . . .	849
