Part A Generation and Analysis of Transgenic Plants

1 Plant Nuclear Transformation	3
John J. Finer	
1.1 Introduction to Plant Transformation	3
1.1.1 DNA Introduction Basics	3
1.2 Transient Expression	4
1.2.1 Optimization of Transient Expression	5
1.2.2 Transient Expression to Study Gene Expression and Stability	5
1.3 Agrobacterium Background	6
1.3.1 A String of Improvements for <i>Agrobacterium</i>	7
1.3.2 Agrobacterium– Plant Interactions	8
1.3.3 Reducing Agents	8
1.3.4 Agroinfiltration	9
1.3.5 <i>Arabidopsis</i> Floral Dip	9
1.4 Particle Bombardment	10
1.4.1 Gene Guns	11
1.4.2 Optimization of DNA Delivery	11
1.4.3 Control of DNA Integration Patterns	12
1.5 Other Direct DNA Uptake Approaches	12
1.5.1 Protoplasts	13
1.5.2 Whole Tissue Electroporation	13
1.5.3 Silicon Carbide Whiskers	14
1.5.4 Nanofiber Arrays	14
1.5.5 Pollen Tube Pathway	15
1.6 Evidence for Transformation	16
1.6.1 DNA Presence	16
1.6.2 Gene Expression	17
1.7 Conclusions	18
References	18

2	Plastid Transformation	23
	Heribert Warzecha and Anna Hennig	
2.1	Introduction	23
2.2	Delivery of Transforming DNA to the Chloroplast	24
2.3	Vector Design	27
2.3.1	Flanking Regions	27
2.3.2	Promoters and UTRs	29
2.4	Transgene Stacking and Control of Gene Expression	30
2.5	Selection	31
2.5.1	Antibiotic Resistance Markers	31
2.5.2	Other Selection Markers	32
2.6	Marker Gene Excision	32
2.7	Analysis	33
2.8	Conclusions	34
	References	34
3	Concepts of Marker Genes for Plants	39
	Josef Kraus	
3.1	Introduction	39
3.2	Criteria for Choosing the Marker Gene System	40
3.3	Availability of Selectable Marker Gene Systems and Alternatives	42
3.3.1	Positive Selection Marker	42
3.3.2	Alternative Systems	47
3.3.3	Screenable Marker Genes	51
3.3.4	Negative Selection Marker	52
3.3.5	Marker-Free Transformation Without Usage of Any Marker Gene	52
3.4	Conclusions and Perspective	53
	References	54
4	Precise Breeding Through All-Native DNA Transformation	61
