

Contents

1	Introduction	1
1.1	Peer-to-Peer Computing	1
1.2	Potential, Benefits, and Applications	3
1.3	Challenges and Design Issues	7
1.4	P2P vs. Grid Computing	8
1.5	Summary	10
2	Architecture of Peer-to-Peer Systems	11
2.1	A Taxonomy	12
2.1.1	Centralized P2P Systems	13
2.1.2	Decentralized P2P Systems	13
2.1.3	Hybrid P2P Systems	15
2.2	Centralized P2P Systems	15
2.2.1	Napster: Sharing of Digital Content	17
2.2.2	About SETI@home	18
2.3	Fully Decentralized P2P Systems	20
2.3.1	Properties	21
2.3.2	Gnutella: The First “Pure” P2P System	22
2.3.3	PAST: A Structured P2P File Sharing System	24
2.3.4	Canon: Turning Flat DHT into Hierarchical DHT	26
2.3.5	Skip Graph: A Probabilistic-Based Structured Overlay	28
2.4	Hybrid P2P Systems	31
2.4.1	BestPeer: A Self-Configurable P2P System	32
2.5	Summary	36
3	Routing in Peer-to-Peer Networks	39
3.1	Evaluation Metrics	40
3.2	Routing in Unstructured P2P Networks	40
3.2.1	Basic Routing Strategies	41
3.2.2	Heuristic-Based Routing Strategies	43
3.3	Routing in Structured P2P Networks	50
3.3.1	Chord	52

- 3.3.2 CAN 56
- 3.3.3 PRR Trees, Pastry and Tapestry 58
- 3.3.4 Viceroy 63
- 3.3.5 Crescendo 64
- 3.3.6 Skip Graph 65
- 3.3.7 SkipNet 67
- 3.3.8 P-Grid 67
- 3.3.9 P-Tree 69
- 3.3.10 BATON 71
- 3.4 Routing in Hybrid P2P Networks 73
 - 3.4.1 Hybrid Routing 73
- 3.5 Summary 78

- 4 Data-Centric Applications 81**
 - 4.1 Multi-Dimensional Data Sharing 82
 - 4.1.1 VBI-Tree 84
 - 4.1.2 Mercury 86
 - 4.1.3 SSP 88
 - 4.2 High-Dimensional Indexing 90
 - 4.2.1 CISS 91
 - 4.2.2 ZNet 92
 - 4.2.3 M-Chord 94
 - 4.2.4 SIMPEER 96
 - 4.2.5 LSH Forest 97
 - 4.3 Textual Information Retrieval 98
 - 4.3.1 Basic Techniques 100
 - 4.3.2 PlanetP 104
 - 4.3.3 Summary Index 106
 - 4.3.4 pSearch 107
 - 4.3.5 PRISM 109
 - 4.4 Structured Data Management 111
 - 4.4.1 Query Processing in Heterogeneous Data Sources 112
 - 4.4.2 Piazza 118
 - 4.4.3 Hyperion 121
 - 4.4.4 PeerDB 123
 - 4.5 Summary 125

- 5 Load Balancing and Replication 127**
 - 5.1 Load Balancing 128
 - 5.1.1 When Load Balancing is Triggered 128
 - 5.1.2 How Load Balancing is Performed 131
 - 5.2 Load Balancing in Concrete Systems 132
 - 5.2.1 Basic Load Balancing Schemes with Virtual Nodes 132
 - 5.2.2 Y_0 Protocol 134
 - 5.2.3 The S&M Protocol 135
 - 5.2.4 A Combination of Both Local and Random Probes 137

- 5.2.5 Mercury 137
- 5.2.6 Online Balancing of Range-partitioned Data 139
- 5.3 Replication 140
 - 5.3.1 Replica Granularity 140
 - 5.3.2 Replica Quantity 142
 - 5.3.3 Replica Distribution 143
 - 5.3.4 Replica Consistency 144
 - 5.3.5 Replica Replacement 144
- 5.4 Replication in Concrete Systems 145
 - 5.4.1 Replication in Read-only Unstructured P2P Systems 145
 - 5.4.2 Replication in Read-only Structured P2P Systems 145
 - 5.4.3 Beehive 147
 - 5.4.4 Symmetric Replication for Structured Peer-to-Peer Systems 149
 - 5.4.5 CUP: Controlled Update Propagation in Peer-to-Peer Networks 150
 - 5.4.6 Dynamic Replica Placement for Scalable Content Delivery 151
 - 5.4.7 Updates in Highly Unreliable, Replicated P2P Systems 152
 - 5.4.8 Proactive Replication 154
- 5.5 Summary 155
- 6 Security in Peer-to-Peer Networks 157**
 - 6.1 Routing Attacks 157
 - 6.1.1 Incorrect Lookup Routing 158
 - 6.1.2 Incorrect Routing Updates 158
 - 6.1.3 Incorrect Routing Network Partition 158
 - 6.1.4 Secure Routing Scheme 159
 - 6.2 Storage and Retrieval Attacks 160
 - 6.3 Denial-of-Service Attacks 162
 - 6.3.1 Managing Attacks 163
 - 6.3.2 Detecting and Recovering from Attacks 164
 - 6.3.3 Other Attacks 166
 - 6.4 Data Integrity and Verification 166
 - 6.4.1 Verifying Queries in Relational Databases 167
 - 6.4.2 Self-verifying Data with Erasure Code 170
 - 6.5 Verifying Integrity of Computation 171
 - 6.6 Free Riding and Fairness 172
 - 6.6.1 Quota-Based System 173
 - 6.6.2 Trading-Based Schemes 174
 - 6.6.3 Distributed Auditing 175
 - 6.6.4 Incentive-Based Schemes 176
 - 6.6.5 Adaptive Topologies 178
 - 6.7 Privacy and Anonymity 179
 - 6.8 PKI-Based Security 181
 - 6.9 Summary 182

- 7 Trust and Reputation 183**
 - 7.1 Concepts 184
 - 7.1.1 Trust Definitions 184
 - 7.1.2 Trust Types 185
 - 7.1.3 Trust Values 186
 - 7.1.4 Trust Properties 187
 - 7.2 Trust Models 188
 - 7.2.1 Trust Model Based on Credentials 189
 - 7.2.2 Trust Model Based on Reputation 189
 - 7.3 Trust Systems Based on Credentials 190
 - 7.3.1 PolicyMaker 190
 - 7.3.2 Trust-X 192
 - 7.4 Trust Systems Based on Individual Reputation 194
 - 7.4.1 P2PRep 194
 - 7.4.2 XRep 196
 - 7.4.3 Cooperative Peer Groups in NICE 197
 - 7.4.4 PeerTrust 198
 - 7.5 Trust Systems Based on Both Individual Reputation and Social Relationship 200
 - 7.5.1 Regret 200
 - 7.5.2 NodeRanking 202
 - 7.6 Trust Management 203
 - 7.6.1 XenoTrust 205
 - 7.6.2 EigenRep 207
 - 7.6.3 Trust Management with P-Grid 210
 - 7.7 Summary 212

- 8 P2P Programming Tools 215**
 - 8.1 Low Level P2P Programming 215
 - 8.1.1 Sockets 216
 - 8.1.2 Remote Procedure Call 216
 - 8.1.3 Web Services 217
 - 8.2 High Level P2P Programming 217
 - 8.2.1 JXTA 218
 - 8.2.2 BOINC 221
 - 8.2.3 P2 222
 - 8.2.4 Mace 223
 - 8.2.5 OverlayWeaver 223
 - 8.2.6 Microsoft’s Peer-to-Peer Framework 224
 - 8.3 Deployment and Testing Environments 225
 - 8.3.1 PlanetLab 225
 - 8.3.2 Emulab 226
 - 8.3.3 Amazon.com 227
 - 8.4 Summary 227

- 9 Systems and Applications 229**
 - 9.1 Classic File Sharing Systems 229
 - 9.1.1 Napster 229
 - 9.1.2 Gnutella 233
 - 9.1.3 Freenet 237
 - 9.2 Peer-to-Peer Backup 243
 - 9.2.1 pStore 244
 - 9.2.2 A Cooperative Internet Backup Scheme 247
 - 9.2.3 Pastiche 248
 - 9.2.4 Samsara—Fairness for Pastiche 250
 - 9.2.5 Other Systems 251
 - 9.2.6 Analysis of Existing Systems 252
 - 9.3 Data Management 254
 - 9.3.1 Architectures for P2P Data Management Systems 254
 - 9.3.2 XML Content Routing Network 258
 - 9.3.3 Continuous Query Processing 260
 - 9.4 Peer-to-Peer-Based Web Caching 262
 - 9.4.1 Background of Web Caching 262
 - 9.4.2 Squirrel 263
 - 9.4.3 BuddyWeb: A P2P-based Collaborative Web Caching System 266
 - 9.5 Communication and Collaboration 270
 - 9.5.1 Instant Messaging 270
 - 9.5.2 Jabber 270
 - 9.5.3 Skype 271
 - 9.5.4 Distributed Collaboration 272
 - 9.6 Mobile Applications 273
 - 9.6.1 Communication Applications 273
 - 9.6.2 File Sharing Applications 274
 - 9.7 Summary 276

- 10 Conclusions 279**
 - 10.1 Summary 279
 - 10.1.1 Architecture 279
 - 10.1.2 Routing and Resource Discovery 280
 - 10.1.3 Data-Centric Applications 281
 - 10.1.4 Load Balancing and Replication 282
 - 10.1.5 Programming Models 282
 - 10.1.6 Security Problems 283
 - 10.1.7 Trust Management 284
 - 10.2 Potential Research Directions 285
 - 10.2.1 Sharing Structured Databases 285
 - 10.2.2 Security 286
 - 10.2.3 Data Stream Processing 287
 - 10.2.4 Testbed and Benchmarks 287

- 10.3 Applications in Industry 288
 - 10.3.1 Supply Chain Management Case Study 289
