1 Radical Substitution Reactions at the Saturated C Atom .......................... 1

1.1 Bonding and Preferred Geometries in Carbon Radicals, Carbenium Ions and Carbanions ............................. 2
  1.1.1 Preferred Geometries .................................... 3
  1.1.2 Bonding ...................................................... 4

1.2 Stability of Radicals ........................................ 5
  1.2.1 Reactive Radicals ........................................... 6
  1.2.2 Unreactive Radicals ....................................... 10

1.3 Relative Rates of Analogous Radical Reactions ...................... 12
  1.3.1 The Bell–Evans–Polanyi Principle .......................... 12
  1.3.2 The Hammond Postulate .................................... 14

1.4 Radical Substitution Reactions: Chain Reactions .................... 15

1.5 Radical Initiators .............................................. 17

1.6 Radical Chemistry of Alkylmercury(II) Hydrides ................. 18

1.7 Radical Halogenation of Hydrocarbons ........................................ 21
  1.7.1 Simple and Multiple Chlorinations ............................. 21
  1.7.2 Regioselectivity of Radical Chlorinations ..................... 23
  1.7.3 Regioselectivity of Radical Brominations Compared to
       Chlorinations .............................................. 25
  1.7.4 Rate Law for Radical Halogenations; Reactivity/Selectivity
       Principle and the Road to Perdition .......................... 27
  1.7.5 Chemoselectivity of Radical Brominations .................... 29
  1.7.6 Radical Chain Chlorination Using Sulfuryl Chloride ........... 35

1.8 Autoxidations .................................................................. 38

1.9 Synthetically Useful Radical Substitution Reactions .............. 41
  1.9.1 Simple Reductions ............................................. 41
  1.9.2 Formation of 5-Hexenyl Radicals: Competing Cyclopentane
       Formation ....................................................... 44

1.10 Diazene Fragmentations as Novel Alkane Syntheses .............. 46

2 Nucleophilic Substitution Reactions at the Saturated C Atom ........ 53

2.1 Nucleophiles and Electrophiles; Leaving Groups ...................... 53

2.2 Good and Poor Nucleophiles ....................................... 54

2.3 Leaving Groups: Good, Bad and Ugly ................................ 58

2.4 $S_{N}2$ Reactions: Kinetic and Stereochemical Analysis—Substituent Effects
       on Reactivity ................................................. 60
  2.4.1 Energy Profile and Rate Law for $S_{N}2$ Reactions: Reaction Order .... 60
  2.4.2 Stereochemistry of $S_{N}2$ Substitutions ....................... 62
Contents

2.4.3 A Refined Transition State Model for the \( \text{S}_\text{N}^2 \) Reaction; Crossover Experiment and Endocyclic Restriction Test ............... 63
2.4.4 Substituent Effects on \( \text{S}_\text{N}^2 \) Reactivity. ........................................ 66

2.5 \( \text{S}_\text{N}^1 \) Reactions: Kinetic and Sterechemical Analysis; Substituent Effects on Reactivity ........................................ 69
2.5.1 Energy Profile and Rate Law of \( \text{S}_\text{N}^1 \) Reactions; Steady State Approximation ........................................ 69
2.5.2 Stereochemistry of \( \text{S}_\text{N}^1 \) Reactions; Ion Pairs ...................... 72
2.5.3 Solvent Effects on \( \text{S}_\text{N}^1 \) Reactivity ......................................................... 73
2.5.4 Substituent Effects on \( \text{S}_\text{N}^1 \) Reactivity. ........................................ 76

2.6 When Do \( \text{S}_\text{N} \) Reactions at Saturated C Atoms Take Place According to the \( \text{S}_\text{N}^1 \) Mechanism and When Do They Take Place According to the \( \text{S}_\text{N}^2 \) Mechanism? ................................................................. 83

2.7 Getting by with Help from Friends, or a Least Neighbors: Neighboring Group Participation ........................................ 83
2.7.1 Conditions for and Features of \( \text{S}_\text{N} \) Reactions with Neighboring Group Participation ........................................ 83
2.7.2 Increased Rate through Neighboring Group Participation .......... 85
2.7.3 Stereoselectivity through Neighboring Group Participation ......... 86

2.8 \( \text{S}_\text{N}^i \) Reactions .......................................................... 89

2.9 Preparatively Useful \( \text{S}_\text{N}^2 \) Reactions: Alkylations .............................. 91

3 Electrophilic Additions to the \( \text{C}=>\text{C} \) Double Bond ...................... 103

3.1 The Concept of \textit{cis}- and \textit{trans}-Addition .......................................... 104

3.2 Vocabulary of Stereochemistry and Stereoselective Synthesis I .......... 104
3.2.1 Isomerism, Diastereomers/Enantiomers, Chirality .......................... 104
3.2.2 Chemoselectivity, Diastereoselectivity/Enantioselectivity, Stereoselectivity/Stereocurrencyence .............................. 106

3.3 Electrophilic Additions that Take Place Diastereoselectively as \textit{cis}-Additions .......................................................... 109
3.3.1 A Cycloaddition Forming Three-Membered Rings .......................... 109
3.3.2 Additions to \( \text{C}=>\text{C} \) Double Bonds That Are Related to Cycloadditions and Also Form Three-Membered Rings ................. 114
3.3.3 \textit{cis}-Hydration of Alkenes via the Hydroboration/Oxidation/Hydrolysis Reaction Sequence .............................. 118
3.3.4 Heterogeneous Hydrogenation ......................................................... 126

3.4 Enantioselective \textit{cis}-Additions to \( \text{C}=>\text{C} \) Double Bonds .................. 128
3.4.1 Vocabulary of Stereochemistry and Stereoselective Synthesis II: Topicity, Asymmetric Synthesis ......................................................... 128
3.4.2 Asymmetric Hydroboration of Achiral Alkenes ............................... 129
3.4.3 Thought Experiment I on the Hydroboration of Chiral Alkenes with Chiral Boranes: Mutual Kinetic Resolution .................. 131

9.2.1 Mechanism .................................................................... 371
9.2.2 Formation of $O,O$-Acetals ............................................... 373
9.2.3 Formation of $S,S$-Acetals ............................................... 382
9.2.4 Formation of $N,N$-Acetals .................................................. 383

9.3 Addition of Nitrogen Nucleophiles to Carbonyl Compounds in Combination with Subsequent $E_1$ Eliminations of the Primary Product: Condensation Reactions .................................................. 386

10 Addition of Hydride Donors and of Organometallic Compounds to Carbonyl Compounds ................................................................. 397

10.1 Suitable Hydride Donors and Organometallic Compounds; the Structure of Organolithium Compounds and Grignard Reagents ...................... 397
10.2 Chemoselectivity of the Addition of Hydride Donors to Carbonyl Compounds ................................................................. 403
10.3 Diastereoselectivity of the Addition of Hydride Donors to Carbonyl Compounds ................................................................. 405
10.3.1 Diastereoselectivity of the Addition of Hydride Donors to Cyclic Ketones ................................................................. 406
10.3.2 Diastereoselectivity of the Addition of Hydride Donors to $\alpha$-Chiral Acyclic Carbonyl Compounds ................................................................. 411
10.3.3 Diastereoselectivity of the Addition of Hydride Donors to $\beta$-Chiral Acyclic Carbonyl Compounds ................................................................. 419
10.4 Enantioselective Addition of Hydride Donors to Carbonyl Compounds ................................................................. 422
10.5 Addition of Organometallic Compounds to Carbonyl Compounds ................................................................. 426
10.5.1 Simple Addition Reactions of Organometallic Compounds ................................................................. 426
10.5.2 Enantioselective Addition of Organozinc Compounds to Carbonyl Compounds: Chiral Amplification ................................................................. 437
10.5.3 Diastereoselective Addition of Organometallic Compounds to Carbonyl Compounds ................................................................. 440
10.6 1,4-Additions of Organometallic Compounds to \( \alpha,\beta \)-Unsaturated Ketones; Structure of Copper-Containing Organometallic Compounds  

11 Conversion of Phosphorus- or Sulfur-Stabilized C Nucleophiles with Carbonyl Compounds: Addition-Induced Condensations  

11.1 Condensation of Phosphonium Ylides with Carbonyl Compounds: Wittig Reaction  
11.1.1 Bonding in Phosphonium Ylides  
11.1.2 Nomenclature and Preparation of Phosphonium Ylides  
11.1.3 Mechanism of the Wittig Reaction  

11.2 Wittig–Horner Reaction  

11.3 Horner–Wadsworth–Emmons Reaction  
11.3.1 Horner–Wadsworth–Emmons Reactions Between Achiral Substrates  
11.3.2 Horner–Wadsworth–Emmons Reactions between Chiral Substrates: A Potpourri of Stereochemical Specialties  

11.4 (Marc) Julia–Lythgoe- and (Sylvestre) Julia–Kocienski Olefination  

12 The Chemistry of Enols and Enamines  

12.1 Keto-Enol Tautomerism; Enol Content of Carbonyl and Carboxyl Compounds  
12.2 \( \alpha,\beta \)-Functionalization of Carbonyl and Carboxyl Compounds via Tautomeric Enols  
12.3 \( \alpha,\beta \)-Functionalization of Ketones via Their Enamines  
12.4 \( \alpha,\beta \)-Functionalization of Enol Ethers and Silyl Enol Ethers  

13 Chemistry of the Alkaline Earth Metal Enolates  

13.1 Basic Considerations  
13.1.1 Notation and Structure of Enolates  
13.1.2 Preparation of Enolates by Deprotonation  
13.1.3 Other Methods for the Generation of Enolates  
13.1.4 Survey of Reactions between Electrophiles and Enolates and the Issue of Ambidoselectivity  

13.2 Alkylation of Quantitatively Prepared Enolates and Aza-enolates; Chain-Elongating Syntheses of Carbonyl Compounds and Carboxylic Acid Derivatives  
13.2.1 Chain-Elongating Syntheses of Carbonyl Compounds  
13.2.2 Chain-Elongating Syntheses of Carboxylic Acid Derivatives  

13.3 Hydroxalkylation of Enolates with Carbonyl Compounds ("Aldol Addition"): Synthesis of \( \beta \)-Hydroxyketones and \( \beta \)-Hydroxyesters  
13.3.1 Driving Force of Aldol Additions and Survey of Reaction Products  
13.3.2 Stereocontrol
13.4 Condensation of Enolates with Carbonyl Compounds: Synthesis of Michael Acceptors
13.4.1 Aldol Condensations
13.4.2 Knoevenagel Reaction
13.5 Acylation of Enolates
13.5.1 Acylation of Ester Enolates
13.5.2 Acylation of Ketone Enolates
13.5.3 Acylation of the Enolates of Active-Methylene Compounds
13.6 Michael Additions of Enolates
13.6.1 Simple Michael Additions
13.6.2 Tandem Reactions Consisting of Michael Addition and Consecutive Reactions
