

Contents

1	What Is This All About?	1
1.1	Patterns, Complexity, and Entropy	1
1.1.1	Information Theory	1
1.1.2	Symbolic Dynamics	4
1.1.3	Dynamical Systems	9
1.1.4	Computer Science	15
1.1.5	Cellular Automata	18
1.2	Admissible and Forbidden Ordinal Patterns	21
2	First Applications	29
2.1	Entropy Estimation	29
2.2	Permutation Complexity	33
2.3	Estimation of Control Parameters from Symbolic Sequences	37
2.4	Characterizing Synchronization	43
3	Ordinal Patterns	49
3.1	Symbol Patterns	50
3.2	Order Relations	52
3.3	Ordinal Patterns Defined by Maps	54
3.4	Properties of the Ordinal Patterns	57
3.4.1	Invariance Under Order Isomorphism	57
3.4.2	Growth of Forbidden Patterns with Length: Outgrowth Patterns	60
3.4.3	Robustness Against Noise in Deterministic Time Series	63
4	Ordinal Structure of the Shifts	69
4.1	Ordinal Patterns and the Shift Maps	69
4.2	Forbidden Patterns for One-Sided Shifts	71
4.3	Forbidden Patterns for Two-Sided Shifts	81
5	Ordinal Structure of the Signed Shifts	85
5.1	Ordinal Patterns and the Tent Map	85

- 5.1.1 A State-Dependent Shift Approach to the Tent Map 85
- 5.1.2 The Interval Structure of the Sets P_π 89
- 5.2 Ordinal Patterns and the Signed Shifts 91

- 6 Metric Permutation Entropy 105**
 - 6.1 The Metric Permutation Entropy of a Finite-State Process 106
 - 6.2 Permutation Metric Entropy of Maps 114
 - 6.3 On the Definition of Metric Permutation Entropy for Maps 118
 - 6.4 Numerical Issues 122

- 7 Topological Permutation Entropy 125**
 - 7.1 Topological Permutation Entropy of Sources 125
 - 7.2 Constrained Sequences 127
 - 7.3 Topological Permutation Entropy of Maps 131
 - 7.4 Relation Between Topological Entropy and Topological
Permutation Entropy 133
 - 7.5 Estimating Topological Entropy 136
 - 7.6 Existence of Forbidden Ordinal Patterns 138
 - 7.7 Numerical Simulations 140

- 8 Discrete Entropy 147**
 - 8.1 Discrete Entropy 148
 - 8.2 The Infinite Limit 152
 - 8.3 Discrete Topological Entropy 156

- 9 Detection of Determinism 159**
 - 9.1 Dynamical Robustness Against Observational Noise 160
 - 9.2 Detection of Determinism I: Number of Missing Ordinal
Patterns 162
 - 9.3 Detection of Determinism II: Distribution of Visible Ordinal
Patterns 166
 - 9.4 A Benchmark 168
 - 9.5 Numerical Simulations 169
 - 9.5.1 The Lorenz Map 170
 - 9.5.2 The Delayed Hénon Map 172

- 10 Space–Time Dynamics 177**
 - 10.1 Spatially Extended Systems 177
 - 10.1.1 Cellular Automata 178
 - 10.1.2 Coupled Map Lattices 180
 - 10.2 Applications of Permutation Complexity to Spatiotemporal
Dynamics 182
 - 10.2.1 Topological Entropy of CA 182
 - 10.2.2 Complexity Classes of Elementary CA 186

10.2.3 Phases of CMLs 190

10.2.4 Spatiotemporal Regularity of CMLs 193

11 Conclusion and Outlook 195

A Mathematical Framework 199

A.1 Dynamical Systems 199

A.2 Shift Systems 206

A.3 Stochastic Processes and Sequence Spaces 211

B Entropy 213

B.1 Shannon Entropy 213

B.1.1 The Entropy of a Discrete Random Variable 213

B.1.2 The Entropy Rate of a Discrete-Time Finite-State
Stochastic Process 217

B.2 Kolmogorov–Sinai Entropy 219

B.2.1 Deterministic Systems 219

B.2.2 Random Systems 223

B.3 Topological Entropy 226

B.3.1 Generalities 226

B.3.2 Topological Entropy of One-Dimensional Maps 231
