

Contents

1	Introduction	1
1.1	Definitions	3
1.2	Motivation.....	4
1.3	Goals	5
1.4	Outline	6
2	Production and Operations Management: Models and Algorithms	9
2.1	Dynamic Lot-Sizing	10
2.1.1	Classification of Models	11
2.1.2	The Wagner–Whitin Problem	33
2.1.3	The Capacitated Lot-Sizing Problem.....	34
2.1.4	The Capacitated Lot-Sizing Problem with Sequence-Dependent Setups	36
2.1.5	The General Lot-Sizing and Scheduling Problem	39
2.1.6	The Multi-Level Capacitated Lot-Sizing Problem.....	42
2.1.7	The General Lot-Sizing and Scheduling Problem for Multiple Production Stages	44
2.1.8	Comparison of Models	51
2.2	Solution Techniques for Dynamic Lot-Sizing	52
2.2.1	Overview.....	52
2.2.2	Valid Inequalities	54
2.2.3	Reformulations	55
2.2.4	Combinations of Heuristics and Exact Algorithms	57
2.2.5	Selected Approaches for Lot-Sizing with Sequence-Dependent Setups	61
2.3	Transshipment Problems	62
2.3.1	Basics	62
2.3.2	Classification of Models	63
2.4	Solution Techniques for Transshipment Problems	66
2.4.1	Existing Approaches for Transshipment Problems	66
2.4.2	Simulation-Based Optimization	68
2.4.3	Robust Optimization	78

3	Graphical Modeling of Substitutions and Flexible Bills-of-Materials ...	81
3.1	Applications.....	81
3.2	Modeling Approaches	84
3.2.1	Blending Models	85
3.2.2	Substitution Graphs	85
3.2.3	Substitution Hypergraphs	89
3.2.4	Task-Oriented Modeling	94
3.2.5	Comparison of Modeling Approaches	97
3.3	Model Classification Criteria.....	98
3.3.1	Demand	98
3.3.2	Model Context	102
3.3.3	Substitution Characteristics	103
3.3.4	Conversions.....	103
3.3.5	Production	106
3.4	Implementing Product Substitution.....	106
4	Literature Review	111
4.1	Assortment Problems	111
4.2	Lot-Sizing with Substitutions	112
4.2.1	The Requirements Planning Problem with Substitutions.....	113
4.2.2	Substitution with/without Conversion Problems.....	116
4.2.3	The Multi-level Lot-Sizing Problem with Flexible Production Sequences	117
4.3	Related Aspects.....	121
5	Efficient Reformulations for Uncapacitated and Capacitated Lot-Sizing with Substitutions and Initial Inventories	125
5.1	Introduction	125
5.2	Outline	126
5.3	The Lot-Sizing Problem with Substitution and Initial Inventory	126
5.3.1	Model Formulation	127
5.3.2	Facility Location Based Reformulation	128
5.3.3	Valid Inequalities	131
5.4	The Multi-Resource Capacitated Lot-Sizing Problem with Substitution.....	131
5.5	Computational Experiments.....	133
5.5.1	Problem Instances	134
5.5.2	Solution Approaches	136
5.5.3	Experimental Designs, Results and Interpretation	136
5.6	Conclusions	145
5.7	Transformation of LSP-SI into a CFLP	146
5.8	Proof that LSP-SI is NP-Hard.....	148
5.9	Proof for Product Substitution (1,S)-Cuts.....	149

6	MIP-Based Heuristics for Capacitated Lot-Sizing with Sequence-Dependent Setups and Substitutions	151
6.1	Introduction	151
6.2	Outline	152
6.3	The Capacitated Lot-Sizing Problem with Sequence-Dependent Setups and Substitutions	153
6.3.1	Assumptions	153
6.3.2	Formulation	154
6.4	Determining Efficient or Good Sequences	157
6.5	MIP-Based Heuristics	158
6.5.1	Subproblems with Relaxed or Fixed Binary Variables	158
6.5.2	Decompositions	160
6.5.3	Relax&Fix	165
6.5.4	Fix&Optimize	166
6.5.5	Two-Stage Relax&Fix / Optimize Algorithm	169
6.5.6	Time Limit and Stopping Criterion for Subproblems	169
6.6	Computational Experiments	170
6.6.1	Problem Instances	170
6.6.2	Experimental Design	175
6.6.3	Solution Approaches	175
6.6.4	Results and Interpretation	177
6.7	Summary and Conclusions	182
7	Multi-Level Lot-Sizing Models with Flexible Bills-of-Materials	185
7.1	The Multi-Level Capacitated Lot-Sizing Problem with Substitutions	185
7.1.1	Assumptions	186
7.1.2	Formulation	187
7.1.3	Example of Substitution Hypergraph	189
7.1.4	Transformation into Special Case of MLFP	190
7.1.5	Echelon Stocks and Flexible BOMs	191
7.2	The General Lot-Sizing and Scheduling Problem for Multiple Production Stages with Flexible Production Sequences ..	191
7.2.1	Assumptions	191
7.2.2	Formulation	193
7.2.3	Ensuring Temporal Feasibility within Micro-Periods	197
7.2.4	Transformation of GLSPMS into Special Case of GLSPMS-FPS	203
8	Blood Inventory Control with Transshipments and Substitutions	205
8.1	Introduction	205
8.1.1	Analogy Between Transshipments and Substitutions	205
8.1.2	Outline	207
8.2	Combining Transshipments and Substitutions	207
8.3	Blood Bank Inventory Control	208

8.4	Blood Bank Simulation Model	211
8.4.1	Assumptions	211
8.4.2	Replenishment, Substitution and Transshipment Policies	212
8.5	Simulation-Based Optimization Approach	214
8.5.1	Optimization Problem	214
8.5.2	Pattern Search Algorithm	215
8.5.3	Adaption of PS Algorithm	217
8.6	Computational Experiments	218
8.6.1	Setup	218
8.6.2	Experiment Designs, Results and Interpretation	220
8.7	Conclusions	225
8.8	Limitations	225
9	Conclusions and Future Research	227
9.1	Conclusions	227
9.2	Future Research	229
9.2.1	Multi-Location Inventory Control with Transshipments and Substitutions	229
9.2.2	Production Planning with Substitution and Flexible BOMs	230
9.2.3	Substitutions and Flexible BOMs in Advanced Planning Software	231
	Appendix A Additional Related Literature	232
	Bibliography	237
	Index	255
