
Contents

1	Introduction	1
1.1	The scope of electrochemistry	1
1.2	A typical system	3
1.3	Inner, outer, and surface potentials	7
	References	8
2	Metal and semiconductor electrodes	9
2.1	Metals	9
2.2	Single crystal surfaces	11
2.3	Semiconductors	14
2.4	Comparison of band structures	16
	References	18
3	Electrolyte solutions	19
3.1	The structure of water	19
3.2	Solvatisation of ions	23
	References	27
4	A few basic concepts	29
4.1	The electrochemical potential	29
4.2	Absolute electrode potential	30
4.3	Three-electrode configuration	33
4.4	Surface tension	35
	References	37
5	The metal-solution interface	39
5.1	Ideally polarizable electrodes	39
5.2	The Gouy–Chapman theory	39
5.3	The Helmholtz capacity	42
5.4	The potential of zero charge	46
	References	50

6	Adsorption on metal electrodes: principles	51
	6.1 Adsorption phenomena	51
	6.2 Adsorption isotherms	52
	6.3 The dipole moment of an adsorbed ion	56
	6.4 Electrosorption valence	59
	6.5 Electrosorption valence and the dipole moment	61
	6.6 Structures of commensurate overlayers on single crystal surfaces	62
	References	64
7	Adsorption on metal electrodes: examples	67
	7.1 The adsorption of halides on metal electrodes	67
	7.2 Underpotential deposition	69
	7.3 Adsorption of aliphatic molecules	73
	References	76
8	Thermodynamics of ideal polarizable interfaces	77
	8.1 Liquid electrodes	77
	8.2 Solid electrodes	83
	8.3 Surface stress	86
	8.4 A note on the electrosorption valence	87
	8.5 Potential of total zero charge	88
	References	89
9	Phenomenological treatment of electron-transfer reactions .	91
	9.1 Outer-sphere electron-transfer	91
	9.2 The Butler–Volmer equation	92
	9.3 Double-layer corrections	96
	9.4 A note on inner-sphere reactions	97
	References	98
10	Theoretical considerations of electron-transfer reactions ...	99
	10.1 Qualitative aspects	99
	10.2 Harmonic oscillator with linear coupling	101
	10.3 Adiabatic electron transfer	102
	10.4 Non-adiabatic electron-transfer reactions	106
	10.5 Gerischer’s formulation	109
	10.6 Multidimensional treatment	110
	10.7 The energy of reorganization	111
	10.8 Adiabatic versus non-adiabatic transitions	113
	References	115
11	The semiconductor-electrolyte interface	117
	11.1 Electrochemistry at semiconductors	117
	11.2 Potential profile and band bending	117
	11.3 Electron-transfer reactions	120

11.4	Photoinduced reaction	124
11.4.1	Photoexcitation of the electrode	124
11.4.2	Photoexcitation of a redox species	128
11.5	Dissolution of semiconductors	128
	References	131
12	Selected experimental results for electron-transfer reactions	133
12.1	Validity of the Butler–Volmer equation	133
12.2	Curvature of Tafel plots	134
12.3	Adiabatic electron-transfer reactions	136
12.4	Transition between adiabatic and non-adiabatic regime	136
12.5	Electrochemical properties of SnO ₂	137
12.6	Photocurrents on WO ₃ electrodes	141
	References	142
13	Inner sphere and ion-transfer reactions	145
13.1	Dependence on the electrode potential	145
13.2	Rate-determining step	148
13.3	Oxygen reduction	149
13.4	Chlorine evolution	151
13.5	Oxidation of small organic molecules: methanol and carbon monoxide	153
13.6	Comparison of ion- and electron-transfer reactions	157
	References	162
14	Hydrogen reaction and electrocatalysis	163
14.1	Hydrogen evolution – general remarks	163
14.2	Reaction mechanism	164
14.3	Volcano plot	165
14.4	Hydrogen evolution on Pt(111)	168
14.5	Principles of electrocatalysis on metal electrodes	169
14.6	Free energy surfaces for the Volmer reaction	173
	References	175
15	Metal deposition and dissolution	177
15.1	Morphological aspects	177
15.2	Surface diffusion	178
15.3	Nucleation	180
15.4	Initial stages of deposition	182
15.5	Growth of two-dimensional films	184
15.6	Deposition on uniformly flat surfaces	187
15.7	Metal dissolution and passivation	190
	References	192

16 Electrochemical surface processes	195
16.1 Surface reconstruction	195
16.2 Steps, line tension and step bunching	198
16.3 Surface mobility	201
16.4 Self-assembled monolayers (SAMs) in electrochemistry	203
References	206
17 Complex reactions	207
17.1 Consecutive charge-transfer reactions	207
17.2 Electrochemical reaction order	209
17.3 Mixed potentials and corrosion	212
References	215
18 Liquid–liquid interfaces	217
18.1 The interface between two immiscible solutions	217
18.2 Partitioning of ions	219
18.3 Energies of transfer of single ions	220
18.4 Double-layer properties	222
18.5 Electron-transfer reactions	225
18.6 Ion-transfer reactions	228
18.7 A model for liquid–liquid interfaces	229
References	234
19 Experimental techniques for electrode kinetics – non-stationary methods	235
19.1 Overview	235
19.2 Effect of mass transport and charge transfer on the current ..	237
19.3 Potential step	238
19.4 Current step	241
19.5 Coulostatic pulses	242
19.6 Impedance spectroscopy	246
19.7 Cyclic voltammetry	249
19.8 Microelectrodes	254
19.9 Complementary methods	255
References	257
20 Convection techniques	259
20.1 Rotating disc electrode	259
20.2 Turbulent pipe flow	264
References	267
Index	269
