Contents

Preface ........................................................................ vii

List of Special Symbols ................................................. xv

1 Introduction ............................................................. 1
  1.1 Symmetric Functions .............................................. 1
  1.2 Essential Basic Notation ......................................... 3
  1.3 The Poisson Summation Formula ............................... 4
  1.4 Euler–Maclaurin Summation Formulae ....................... 5
  1.5 Meromorphic Properties of Mellin Transforms .......... 6

2 Infinite Products and Zeta-Regularization ................. 9
  2.1 Informal Discussion .............................................. 9
  2.2 A Class of Eligible Sequences \{x_k\} ....................... 12
  2.3 Meromorphic Continuation of the Zeta Function ....... 12
  2.4 The Generalized Zeta Function .............................. 14
  2.5 The Zeta-Regularized Product ................................. 15
  2.6 Practical Results ................................................ 18
    2.6.1 Zeta-Regularization: a Zeta-Free Recipe .......... 18
    2.6.2 A Subclass: “Theta-Eligible” Sequences .......... 19
    2.6.3 Explicit Properties of the Generalized Zeta Function 21

3 The Riemann Zeta Function \(\zeta(x): a Primer\) ......... 23
  3.1 Definition and Immediate Properties ....................... 23
  3.2 The Euler Infinite Product .................................... 24
  3.3 The Stieltjes and Cumulant Expansions ................... 24
  3.4 The Functional Equation and Completed Zeta Function \(\Xi(x)\) .................................................. 25
  3.5 The Dirichlet Beta Function \(\beta(x)\) ....................... 28
  3.6 The Hurwitz Zeta Function \(\zeta(x, w)\) .................... 28
4 Riemann Zeros and Factorizations of the Zeta Function ........................................ 33
   4.1 Growth Properties of $\zeta(x)$ and $\Xi(x)$ ........................................... 33
   4.2 The Riemann Zeros (Basic Features) .................................................. 34
   4.3 Hadamard Products for $\Xi(x)$ ...................................................... 35
   4.4 Basic Bounds on $\zeta'/\zeta$ .................................................. 36
   4.5 The (Asymptotic) Riemann–von Mangoldt Formula .......................... 39

5 Superzeta Functions: an Overview ................................................................. 41
   5.1 First Kind ($\mathcal{Z}$) ................................................................. 42
   5.2 Second Kind ($\mathcal{Z}$) ................................................................. 42
   5.3 Third Kind ($\mathcal{Z}$) ................................................................. 44
   5.4 Further Generalizations (Lerch, Cramér, ...) ................................ 44
   5.5 Other Studies on Superzeta Functions ........................................... 45

6 Explicit Formulae ................................................................. 49
   6.1 The Guinand–Weil Explicit Formula ........................................... 49
   6.2 Derivation of the Explicit Formula ........................................... 50
   6.3 Pattern-Matching with the Selberg Trace Formula ......................... 52
      6.3.1 The Selberg Trace Formula (Compact Surface Case) ............... 52
      6.3.2 Comparison with the Explicit Formula .................................. 53
   6.4 Explicit Formulae for the Superzeta Functions .................................... 54
      6.4.1 The Family of the First Kind ($\mathcal{Z}$) .................................. 54
      6.4.2 The Family of the Second Kind ($\mathcal{Z}$) ................................ 56
      6.4.3 Concluding Remarks ............................................................. 58

7 The Family of the First Kind $\{\mathcal{Z}(s \mid t)\}$ .................................... 59
   7.1 The Basic Analytical Continuation Formula ..................................... 59
   7.2 Derivations ............................................................................. 60
      7.2.1 Derivation by Contour Integration ....................................... 60
      7.2.2 Derivation by Eligibility of the Riemann Zeros .................. 62
   7.3 Analytic Properties of the Family $\{\mathcal{Z}(s \mid t)\}$ .......................... 64
   7.4 Special Values of $\mathcal{Z}(s \mid t)$ for General $t$ ........................ 65
   7.5 Imprints of the Central Symmetry $\rho \leftrightarrow (1 - \rho)$ ................. 67
      7.5.1 $t \leftrightarrow (-t)$ Symmetry at Integer $t$ ................................ 67
      7.5.2 Sum Rules at an Arbitrary Fixed $t$ ......................................... 68
   7.6 Special Values of $\mathcal{Z}(s \mid t)$ at $t = 0$ and $\frac{1}{2}$ ................... 69
      7.6.1 The Function $\mathcal{Z}_0(s)$ (the Confluent Case $t = 0$) ........... 69
      7.6.2 The Function $\mathcal{Z}_*(s)$ (the Case $t = \frac{1}{2}$) ..................... 70
   7.7 Tables of Formulae for the Special Values of $\mathcal{Z}$ .......................... 71
      7.7.1 Function of First Kind for General $t$ .................................. 72
      7.7.2 Function of First Kind at $t = 0$ and $\frac{1}{2}$ ............................. 73
8 The Family of the Second Kind \( \{ \mathcal{Z}(\sigma \mid t) \} \) ........................................ 75
8.1 The Confluent Case \( \mathcal{Z}(\sigma \mid t = 0) \equiv \mathcal{Z}_0(\sigma) \) .......... 76
8.2 Meromorphic Continuation in \( \sigma \) for General \( t \) .................. 77
8.3 Algebraic Results for \( \mathcal{Z}(\sigma \mid t) \) at General \( t \) ............... 79
8.4 Transcendental Values of \( \mathcal{Z}(\sigma \mid t) \) for General \( t \) .......... 80
8.5 Imprints of the Central Symmetry \( \rho \leftrightarrow (1 - \rho) \) .......... 80
8.6 Results for \( \mathcal{Z}(\sigma \mid t) \) at \( t = 0 \) and \( t = \frac{1}{2} \) ............. 82
  8.6.1 The Function \( \mathcal{Z}_0(s) \) (the Confluent Case \( t = 0 \) .................... 82
  8.6.2 The Function \( \mathcal{Z}_*(s) \) (the Case \( t = \frac{1}{2} \) ................. 82
8.7 Tables of Formulae for the Special Values of \( \mathcal{Z} \) .......... 84
  8.7.1 Function of Second Kind for General \( t \) .................. 84
  8.7.2 Function of Second Kind at \( t = 0 \) and \( t = \frac{1}{2} \) .......... 85

9 The Family of the Third Kind \( \{ \mathcal{Z}(s \mid \tau) \} \) ...................... 87

10 Extension to Other Zeta- and \( L \)-Functions ..................... 91
  10.1 Admissible Primary Functions \( L(x) \) .......................... 92
  10.2 The Three Superzeta Families ................................. 93
  10.3 The First Family \( \{ \mathcal{Z} \} \) .................. 94
    10.3.1 The Zeta Function \( \mathcal{Z}(s \mid t) \) over the Trivial Zeros .... 94
    10.3.2 The Basic Analytical Continuation
      Formula for \( \mathcal{Z} \) ........................................ 95
    10.3.3 Special Values of \( \mathcal{Z}(s \mid t) \) for General \( t \) .......... 96
    10.3.4 Special Values of \( \mathcal{Z}(s \mid t) \) at \( t = 0 \) and \( \frac{1}{2} \) 97
  10.4 The Second Family \( \{ \mathcal{Z} \} \) .................. 98
    10.4.1 The Confluent Case \( \mathcal{Z}(\sigma \mid t = 0) \equiv \mathcal{Z}_0(\sigma) \) 98
    10.4.2 Algebraic Results for \( \mathcal{Z}(\sigma \mid t) \) at General \( t \) ......... 98
    10.4.3 Transcendental Values of \( \mathcal{Z}(\sigma \mid t) \) at General \( t \) .. 99
  10.5 The Third Family \( \{ \mathcal{Z} \} \) .................. 100
  10.6 Special Concrete Examples ................................. 101
    10.6.1 \( L \)-Functions of Real Primitive Dirichlet Characters ... 101
    10.6.2 Dedekind Zeta Functions .......................... 105
  10.7 Tables of Formulae for the Special Values ................. 108
    10.7.1 For General Primary Functions \( L(x) \) at General \( t \) .... 109
    10.7.2 Dirichlet-\( L \) Cases, Functions of First Kind
      at \( t = 0 \) and \( \frac{1}{2} \) .................................. 110
    10.7.3 Dedekind-\( \zeta \) Cases, Functions of First Kind
      at \( t = 0 \) and \( \frac{1}{2} \) .................................. 111

11 Application: an Asymptotic Criterion for the
  Riemann Hypothesis ........................................... 113
  11.1 Introduction to the Result ................................. 113
  11.2 Asymptotic Alternative for \( \lambda_n, n \to \infty \) ............. 115
Zeta Functions over Zeros of Zeta Functions
Voros, A.
2010, XVII, 163 p., Softcover
