Contents ................................................................................................................ ix

1 Towards Knowledge Democracy........................................................................ 1
  1.1 The overwhelming success of democracy .............................................. 2
  1.2 The curse of success .............................................................................. 3
  1.3 Wide access to information for everyone .............................................. 5
  1.4 From knowledge economy to knowledge democracy............................ 6
  1.5 Reflexivity .............................................................................................. 7
  1.6 Transdisciplinarity ............................................................................... 10

2 The harvest of the “Towards Knowledge Democracy” conference .............. 13
  2.1 The character of the knowledge democracy concept............................... 13
  2.2 The institutional context of knowledge democracy.............................. 14
  2.3 The constitutional values in a knowledge democracy............................ 15
  2.4 The people .......................................................................................... 15
  2.5 The political process: agenda-setting ............................................... 16
  2.6 Wicked problems and configurations ............................................... 17
  2.7 Media ................................................................................................. 18
  2.8 Transdisciplinarity ............................................................................. 18
  2.9 Boundary work ................................................................................ 19
  2.10 Roles of creativity and knowledge .................................................... 20
  2.11 Unwelcome knowledge .................................................................. 20
  2.12 Future research ............................................................................... 21
  2.13 Long term decisions ........................................................................ 21
  2.14 Knowledge governance ...................................................................... 22
  2.15 Commissions as innovative boundary organisms ................................ 23
  2.16 Political networks ........................................................................... 24
  2.17 Knowledge democracy, innovation and sustainability...................... 24

3 Heads in the clouds: knowledge democracy as a Utopian dream .......... 25
  3.1 From “speaking truth to power” to knowledge democracy ................... 25
  3.2 Dreaming of knowledge democracy .................................................... 27
  3.3 Political, scientific, technological and governance utopia .................... 30
  3.4 Knowledge democracy as a utopian dream ......................................... 31
  3.5 Knowledge democracy in practice: two examples from environmental governance .............................................................................................................. 32
  3.6 Utopian dream or totalitarian nightmare? .......................................... 34
4 Dreaming about a properly informed democracy

4.1 Introduction

4.2 An analytical framework of democratic coordination

4.2.1 Precepts for living together

4.2.2 Asymmetrical information, rationality and motivation analysis

4.3 Mediating ideology and information in public governance

4.3.1 Goal formulation

4.3.2 Unintended consequences of ideologies and incentives

4.3.3 Knowledge democracy: a tenuous relationship in an operational void

4.4 Pulling things together: what makes institutions tick?

4.4.1 Principal-agent theory

4.4.2 Situational contracting

4.4.3 Contributions from the behavioural sciences; stewardship

4.4.4 Scope and limitations

4.4.5 Applications, empirical results and points for further research

4.5 Empirical results

4.6 Discussion

4.7 Conclusions

5 One Man – One Vote – One Carbon Footprint: Knowledge for Sustainable Development

5.1 Democracy in a challenging time

5.2 Making democracy work for sustainability

5.3 Co-evolution and knowledge workers

5.4 Democratic climate futures

5.5 Governance of climate emergency?

5.6 Metaphors for the yet untold

5.7 From access to information to informed debate

5.8 Organising informed debates

5.9 Completing the knowledge grid

5.10 A duty-to-know

6 Unlocking the full potential of the crowd – a government perspective

6.1 Introduction

6.3 Method

6.4 Results

6.5 Conclusion

7 Researching publics

7.1 Crisis in social sciences

7.2 Can the social be researched?

7.3 Fluid knowledge

7.4 Crisis in democracy

7.5 Active citizenship

## 10 Media, Democracy and Governance .......................................................... 113
10.1 Introduction ............................................................................................ 113
10.2 Framework ............................................................................................. 114
  10.2.1 Mediocracy ............................................................ 116
  10.2.2 The new media and cyber democracy ......................................... 118
  10.2.3 Adjusting the framework ............................................................ 120
  10.2.4 Reality Show ............................................................................... 122
10.3 Conclusions ............................................................................................ 123

## 11 How can transdisciplinary research contribute to knowledge democracy? ................................................................................................... 125
11.1 Introduction ............................................................................................ 125
11.2 Historical roots of transdisciplinary research ......................................... 127
  11.2.1 The emergence and institutionalisation of transdisciplinary research in Switzerland .............................................................. 127
  11.2.2 The development of transdisciplinary research in the Netherlands .......................................................... 130
11.3 Different transdisciplinary approaches .................................................. 133
11.4 Mutual learning for knowledge production between scientists and societal actors style ......................................................................... 137
  11.4.1 Transdisciplinary case study approach ........................................ 137
  11.4.2 The German ISOE Model of Transdisciplinary Research ........... 139
11.5 Knowledge co-creation between scientists and societal actors, with specific focus on non-dominant actors .................................................. 142
11.6 Mainstreaming transdisciplinary research ............................................. 148
  11.6.1 The need for action by academia ................................................. 148
  11.6.2 Quality criteria and evaluation methods ...................................... 149
11.7 Concluding remarks .............................................................................. 150

## 12 Knowledge synchronisation: interactive knowledge production between experts, bureaucrats and stakeholders ........................................ 153
12.1 Introduction ............................................................................................ 153
12.2 Knowledge in complex decision-making .............................................. 154
  12.2.1 Expert, bureaucratic and stakeholder knowledge ....................... 155
  12.2.2 Negotiated knowledge: where experts, bureaucrats and stakeholders meet .......................................................... 156
  12.2.3 Analytical framework .................................................................... 157
12.3 Case descriptions ................................................................................... 158
  12.3.1 Case 1: Gouwe Wieriecke, introduction and general process description .......................................................... 158
  12.3.2 Case 2: around Arnemuiden, introduction and process description .............................................................. 160
12.4 Case comparison and analysis ................................................................ 163

16 Horizon scanning: monitoring plausible and desirable futures ...............227
  16.1 Introduction ............................................................................................227
  16.2 Comparisons of three horizon scans ......................................................229
      16.2.1 Definition ....................................................................................229
      16.2.2 Aims of national horizon scanning .............................................229
      16.2.3 Phases ..........................................................................................230
      16.2.4 Typical Outcomes ........................................................................231
      16.2.5 Main conclusions of the comparison ...........................................231
  16.3 Theoretical framework for horizon scanning .........................................232
      16.3.1 Search for Issues within the STEEP domains .............................232
      16.3.2 Identifying, characterising and filtering issues............................233
      16.3.3 Clustering and monitoring issues ................................................236
  16.4 The relation of HS with knowledge democracy .....................................237
      16.4.1 HS as an integrated normative and an exploratory process .........238
      16.4.2 The need for participatory processes in HS for other reasons .....239
      16.4.3 The use of HS to inform democratic processes .........................239

17 Four steps to stimulate meaningful communication on sensitive issues in societal debate: the case of a research agenda for biotechnology and food in the Netherlands .......................................................................241
  17.1 Introduction ............................................................................................241
  17.2 Agenda-setting in the institutional void .................................................242
      17.2.1 A societal agenda for biotechnology ...........................................243
      17.2.2 From consultation to construction ...............................................244
      17.2.3 Focus groups and argumentation trees ........................................246
  17.3 Setting the mirror ...................................................................................247
      17.3.1 Step 1 report analysis at the institutional level ............................248
      17.3.2 Step 2 focus groups at the societal level .....................................249
      17.3.3 Step 3 construction: societal map ................................................250
      17.3.4 Step 4 inventory of actual research programmes ........................251
  17.4 Discussion ..............................................................................................252

18 Sustainable development and the governance of long-term decisions ....255
  18.1 The problems of long-term decision-making: a first glance .................255
  18.2 Key problems of long-term decision-making ........................................256
      18.2.1 Impact of “early warnings, late action” .......................................256
      18.2.2 Failures of the governance system .............................................257
      18.2.3 Lessons learned? .........................................................................259
  18.3 An analytical framework for long-term decision-making ......................259
      18.3.1 Typology of long-term decisions ...............................................259
      18.3.2 Dimensions of long-term decisions ..........................................262
      18.3.3 Wise decisions? ..........................................................................263
      18.3.4 The governance system and long-term decision-making ..........264
      18.3.5 Governance approach ................................................................265
      18.3.6 Policy instruments ......................................................................266
18.4 Knowledge and long-term decisions .............................................................. 267
  18.4.1 Building a joint knowledge base .......................................................... 267
  18.4.2 The organisation of knowledge production ........................................... 268
  18.4.3 Future-oriented research and future ODR ........................................... 271
18.5 The cultural dimension of long-term decision-making .................................. 276
18.6 Conclusions .................................................................................................. 279

19 Knowledge governance: complementing hierarchies, networks and markets? ....................................................... 283
  19.1 Introduction ............................................................................................... 283
  19.2 Research methods .................................................................................... 285
  19.3 Forms of governance .............................................................................. 285
  19.4 Why these governance approaches do not always suffice ....................... 288
  19.5 Knowledge governance in Waalblok .................................................... 290
  19.6 The role of knowledge governance .................................................... 292
  19.7 Analysing the characteristics of knowledge governance ....................... 294
  19.8 Conclusion and discussion .................................................................... 296

20 The positioning of commissions in a knowledge democracy ......................... 299
  20.1 Introduction ............................................................................................. 299
  20.2 Definition .................................................................................................. 300
  20.3 A practice of paradox ............................................................................. 301
  20.4 Governing by commission in the Netherlands ........................................ 302
    20.4.1 Commissions of inquiry ..................................................................... 304
    20.4.2 Political commissions ........................................................................ 304
    20.4.3 Evaluation commissions ..................................................................... 305
    20.4.4 Task forces ....................................................................................... 305
  20.5 Knowledge democracy and democratic knowledge .................................... 305
  20.6 On fading boundaries and boundary work .............................................. 307
  20.7 Future positioning of commissions .......................................................... 309
    20.7.1 Towards conventions and network consultations .......................... 310
    20.7.2 Towards citizens’ assemblies .......................................................... 310
    20.7.3 Towards policy hubs ........................................................................ 311
    20.7.4 Towards cascade commissions ........................................................ 311
  20.8 Conclusion and discussion ..................................................................... 312

21 Knowledge exchange through online political networks .......................... 315
  21.1 Introduction ............................................................................................. 315
  21.2 Method ..................................................................................................... 317
  21.3 Results: citizens’ hyves .......................................................................... 318
  21.4 Results: politicians’ hyves ....................................................................... 321
  21.5 Conclusion ............................................................................................... 324
22 Designing the conditions for an innovation system for sustainable development in a knowledge democracy .................................................................327
   22.1 Introduction ..........................................................................................................................327
      22.1.1 What aggregation level seems most appropriate for analysing an SD innovation system? ..................................................328
      22.1.2 Why the linear innovation model will not do .................................................................329
   22.2 Renewal of the business model and sustainable development .................................................330
   22.3 A framework for analysing SD innovation systems ............................................................331
   22.4 Sector innovation systems analysed for their contribution to sustainability .........................332
      22.4.1 The food and nutrition innovation system and sustainable development ......................332
      22.4.2 The energy innovation system and sustainable development .......................................333
      22.4.3 The water innovation system and sustainable development .......................................334
   22.5 Designing the conditions for a sustainable development innovation system and the shortcomings of the present science system in the Netherlands .................................................................335
      22.5.1 Demands on the research and innovation system .........................................................336
      22.5.2 Shortcomings of the present science system .................................................................336
   22.6 Knowledge democracy and innovation for sustainable development ................................339

Closing chapter .............................................................................................................................341
