

Contents

1	Introduction	1
2	The Harmonic Oscillator	7
2.1	From the Hamiltonian to the Operator Acting on L^2	7
2.2	The Spectrum of the Harmonic Oscillator	10
3	The Weyl–Hörmander Calculus	15
3.1	Review of the Weyl–Hörmander Calculus	15
3.2	Global Metrics and Global Pseudodifferential Operators	25
3.3	Spectral Properties of Globally Elliptic Pseudodifferential Operators.....	41
3.4	Notes	53
4	The Spectral Counting Function $N(\lambda)$ and the Behavior of the Eigenvalues: Part 1	55
4.1	The Minimax Principle.....	55
4.2	The Spectral Counting Function	58
4.3	The Spectral Counting Function of the (Scalar) Harmonic Oscillator	61
4.4	Consequences on the Spectral Counting Function of an Elliptic Global ψ do	65
5	The Heat-Semigroup, Functional Calculus and Kernels	67
5.1	Elementary Properties of the Heat-Semigroup.....	67
5.2	Direct Definition of $\text{Tr} e^{-tA}$	69
5.3	Abstract Functional Calculus	71
5.4	Kernels	73
5.5	$f(A)$ as a Pseudodifferential Operator.....	77
5.6	Notes	77
6	The Spectral Counting Function $N(\lambda)$ and the Behavior of the Eigenvalues: Part 2	79
6.1	A Parametrix Approximation of e^{-tA}	79
6.2	The Karamata Theorem	83

6.3	Use of the Parametrix Approximation of e^{-tA} for Obtaining the Weyl Asymptotics of $N(\lambda)$	86
6.4	Remarks on the Heuristics on $N(\lambda)$ and $\zeta_A(s)$	91
6.5	Notes	92
7	The Spectral Zeta Function	93
7.1	Robert's Construction of ζ_A by Complex Powers	93
7.2	The Meromorphic Continuation of ζ_A via the Parametrix Approximation of e^{-tA}	96
7.3	The Ichinose–Wakayama Theorem	106
7.4	Notes	110
8	Some Properties of the Eigenvalues of $Q_{(\alpha,\beta)}^w(x, D)$	111
8.1	The Ichinose and Wakayama Bounds	112
8.2	A Better Upper-Bound for the Lowest Eigenvalue	115
8.3	Notes	120
9	Some Tools from the Semiclassical Calculus	121
9.1	The Semiclassical Calculus	121
9.2	Decoupling a System	129
9.3	Some Estimates for Semiclassical Operators	140
9.4	Some Spectral Properties of Semiclassical GPDOs	143
10	On Operators Induced by General Finite-Rank Orthogonal Projections	149
10.1	Reductions by a Finite-Rank Orthogonal Projection	149
10.2	Semiclassical Reduction by a Finite-Rank Orthogonal Projection	155
11	Energy-Levels, Dynamics, and the Maslov Index	161
11.1	Introducing the Dynamics	161
11.2	The Maslov Index	173
11.3	Notes	189
12	Localization and Multiplicity of a Self-Adjoint Elliptic 2×2 Positive NCHO in \mathbb{R}^n	191
12.1	The Set \mathcal{Q}_2 and Its Semiclassical Deformation	192
12.2	Localization and Multiplicity of the Spectrum in the Scalar Case	206
12.3	Localization and Multiplicity of $\text{Spec}(A_2^w(x, D))$, with $A_2 \in \mathcal{Q}_2^s$	227
12.4	Localization and Multiplicity of $\text{Spec}(Q_{(\alpha,\beta)}^w(x, D))$	234
12.5	Localization and Multiplicity of $\text{Spec}(A_2^w(x, D))$, with $A_2 \in \mathcal{Q}_2 \setminus \mathcal{Q}_2^s$	237
12.6	Notes	238

Appendix239

 A.1 Almost-Analytic Extension and the Dyn'kin–Helffer–Sjöstrand Formula239

Main Notation245

 B.1 General Notation245

 B.2 Symbol, Function and Operator Spaces246

 B.3 The Spectral Counting Function and the Spectral ζ -Function247

 B.4 Dynamical Quantities and Assumptions247

 B.5 Classes of Systems247
