Contents

Part I Introduction and Motivation

1 Introduction to Molecular Electronics ......................... 3
   1.1 Present Technology ........................................ 6
   1.2 Limitations of Present Technology .......................... 6
   References ...................................................... 8

2 Motivation—Focusing on Molecular Wires ...................... 9
   References ...................................................... 10

Part II Theoretical Concepts

3 Concepts of Photoinduced Electron and Energy Transfer Processes Across Molecular Bridges ...................... 13
   3.1 Introduction .................................................. 13
   3.2 Electron Transfer Mechanisms ................................. 14
      3.2.1 Superexchange ....................................... 16
      3.2.2 Charge Hopping .................................... 19
      3.2.3 Interplay of Mechanisms ............................... 21
   3.3 Electronic Energy Transfer .................................. 21
      3.3.1 Coulombic Energy Transfer ............................ 23
      3.3.2 Exchange Energy Transfer ............................ 23
   References ...................................................... 24

4 Molecule-Assisted Transport of Charges and Energy Across Donor–Wire–Acceptor Junctions ......................... 27
   4.1 Mechanisms of Charge Transfer through Molecular Wires .......................... 28
      4.1.1 Superexchange Charge Transfer in Molecular Wires .......................... 29
      4.1.2 Sequential Charge Transfer in Molecular Wires .......................... 30
### Contents

#### 4.2 Factors that Determine the Charge Transfer Mechanism
- 4.2.1 Electronic Coupling
- 4.2.2 Energy Matching

#### 4.3 Specific Aspects of Photoinduced Electron Transfer in Organic π-Conjugated Systems
- 4.3.1 Background
- 4.3.2 The Classical Marcus Theory
- 4.3.3 Photoexcitation and Relaxation Processes in Solution
- 4.3.4 Influence of the Solvation on the Electronic Relaxation Dynamics

#### References

#### 5 Examples of Molecular Wire Systems
- 5.1 Oligo(phenylenevinylene)s
- 5.2 Oligophenylenes
- 5.3 Oligo(thiophene)s
- 5.4 Photonic Wires

#### References

#### Part III Results and Discussion

#### 6 Objective

#### References

#### 7 Instruments and Methods
- 7.1 Photophysics
  - 7.1.1 Absorption Spectroscopy
  - 7.1.2 Steady-state Emission
  - 7.1.3 Time-resolved Emission
  - 7.1.4 Femtosecond Transient Absorption Spectroscopy
  - 7.1.5 Nanosecond Laser Flash Photolysis
- 7.2 Chemicals
- 7.3 Molecular Modeling

#### References

#### 8 Energy Transfer Systems
- 8.1 Linking two C₆₀ Electron Acceptors to a Molecular Wire
  - 8.1.1 C₆₀–oPPE–C₆₀—A Representative Example for Efficient Energy Transfer
  - 8.1.2 Energy Transfer in C₆₀–oligo(fluorene)–C₆₀
- 8.2 Tunable Excited State Deactivation
  - 8.2.1 Photophysics
