# Contents

1 Introduction ........................................ 1  
References ............................................. 2  

2 Fundamentals ....................................... 5  
2.1 Principle of the STM ................................. 5  
2.2 Origin of the Tunneling Current .................. 7  
2.3 Scanning Tunneling Spectroscopy .................. 9  
2.4 Contrast Mechanism of Molecular Adsorbates .... 10  
2.5 Temperature Programmed Desorption ............... 12  
2.6 Low Energy Electron Diffraction ................. 14  
References ............................................... 15  

3 Experimental Setup .................................. 17  
3.1 UHV System .......................................... 17  
3.2 Scanning Tunneling Microscope ................... 18  
3.3 Control Electronics and Vibration Isolation ....... 21  
3.4 Ag(111) .............................................. 22  
3.5 Porphyrinoids ...................................... 24  
3.6 Preparation of thin Porphyrinoid Layers .......... 25  
3.7 Vapor-deposition of Cobalt and Iron ............. 27  
References ............................................... 28  

Part I Results  

4 Self-Assembly and Individual Appearance of  
Tetraphenylporphyrins on Ag(111) ..................... 31  
4.1 Introduction ......................................... 31  
4.2 Epitaxial Growth ................................... 32  
4.3 Appearance and Intramolecular Conformation .... 36
9 Multicomponent Adlayers of Tetraphenylporphyrins on Ag(111)

9.1 Understanding the Contrast Mechanism in STM Images of Cobalt Tetraphenylporphyrin on Ag(111)

9.1.1 Introduction

9.1.2 Results

9.1.3 Conclusion

9.2 Fingerprints of Different Porphyrins

9.2.1 Introduction

9.2.2 Results

9.2.3 Conclusion

9.3 Addressing Molecular Orbitals of Cobalt- and Iron-Tetraphenylporphyrins by Continuous Imaging Tunneling Spectroscopy

9.3.1 Introduction

9.3.2 Results

9.3.3 Conclusion

References

10 Modification of the Growth of Iron on Ag(111) by Predeposited Organic Monolayers

10.1 Introduction

10.1.1 Growth of Fe on Ag(111)

10.1.2 Growth of Fe on Ag(111) Precovered with Different Tetrapyrrolic Monolayers

10.2 Conclusion

References

11 Geometric and Electronic Aspects of CoTPP upon Dosage of NO

11.1 Introduction

11.2 In Situ Observation of the Rearrangement of CoTPP on Ag(111)

11.3 Conclusion

11.4 Modification of the Appearance of CoTPP upon Formation of NO-CoTPP

11.5 Conclusion

References

12 Self-Assembly and Voltage-Dependent Appearance of Octaethylporphyrins

12.1 Introduction
12.2 Results .................................................. 154
12.3 Conclusion ............................................. 158
References .................................................. 159

13 Summary and Outlook ................................. 161
13.1 Molecular Ordering and Intramolecular Conformation .................................................. 161
13.2 Coordination of Metal Atoms by Free Base Porphyrinoids ............................................. 162
13.3 Electronic Properties of Porphyrins .......................................................... 163
13.4 Interaction with Small Molecules .......................................................... 163
13.5 Outlook .................................................. 164
