Contents

1 Atomic Bells and Frequency Finders .................. 1
  1.1 Chemical Choirs .................................. 1
  1.2 Essentials of Electromagnetism .................. 3
  1.3 Electromagnetic Microsensors .................... 5
  1.4 Frequency Finders ................................ 8
  1.5 Basics of One-Dimensional NMR .................. 16
Further Reading ......................................... 18

2 Bonded Bells and Two-Dimensional Spectra ........... 19
  2.1 Introduction to Coupling .......................... 19
  2.2 Bonded Bells: J-Coupling ........................ 22
  2.3 NMR Maps: Two-Dimensional Spectra ............... 27
  2.4 The $^1$H–$^{15}$N HSQC: Our Bread and Butter ...... 34
  2.5 Hidden Notes: Creating Two-Dimensional Spectra .. 37
References and Further Reading ........................ 42

3 Neighboring Bells and Structure Bundles ............... 43
  3.1 Bumping Bells: Dipole-Dipole Coupling .......... 44
  3.2 Atomic Meter Stick: The NOE .................... 51
  3.3 Into “Three-D” ..................................... 57
  3.4 Adult “Connect-the-Dots:” HNCA .................. 62
  3.5 Putting the Pieces Together: A Quick Review ..... 66
3.6 Wet Noodles and Proteins Bundles: Building a Three-Dimensional Structure ........................................... 69
References and Further Reading .............................................. 73

4 Silencing of the Bells: Relaxation Theory Part One ........................................... 75
4.1 Nothing Rings Forever: Two Paths to Relax ..................... 76
4.2 Relaxation: Ticket to the Protein Prom ........................... 81
4.3 Oh-My, How Your Field Fluctuates ................................. 84
4.4 Blowing Off Steam and Returning to Equilibrium: $T_1$ .... 92
4.5 Loosing Lock-Step: Coherence and $T_2$ ......................... 97
References and Further Reading .............................................. 105

5 Relaxation Theory Part Two: Moving Atoms and Changing Notes ......................................................... 107
5.1 Keeping the Terms Straight .......................................... 108
5.2 NMR Dynamics in a Nutshell: The Rules of Exchange .... 111
5.3 Two States, One Peak: Atoms in the Fast Lane of Exchange ................................................. 113
5.4 Two States, Two Peaks: Atoms in the Slow Lane of Exchange ......................................................... 116
5.5 Two States, One Strange Peak: Atoms in Intermediate Exchange ...................................................... 117
5.6 Tumbling Together: Rotational Correlation Time ($\tau_c$) .......... 123
5.7 Summary .............................................................. 128
Further Reading ............................................................. 129

6 Protein Dynamics ............................................................ 131
6.1 Dynamics Analysis by NMR: Multi-channel Metronomes, Not a GPS .............................................. 132
6.2 Elegant Simplicity: Lipari and Szabo Throw Out the Models ......................................................... 133
6.3 Wagging Tails and Wiggling Bottoms: Local Versus Global Motion .............................................. 135
6.4 Measuring Fast Motion: *Model Free* Analysis .................. 137
6.5 Changing Directions on the Track: Refocusing Pulses .......... 146
