

Contents

1	Introduction	1
1.1	Manifolds with Constant Sectional Curvature.....	1
1.2	The Topological Sphere Theorem	2
1.2.1	Remarks on the Classical Proof	3
1.2.2	Manifolds with Positive Isotropic Curvature	4
1.2.3	A Question of Optimality	4
1.3	The Differentiable Sphere Theorem	5
1.3.1	The Ricci Flow	5
1.3.2	Ricci Flow in Higher Dimensions.....	7
1.4	Where to Next?.....	8
2	Background Material	11
2.1	Smooth Manifolds	11
2.1.1	Tangent Space	12
2.2	Vector Bundles.....	12
2.2.1	Subbundles	14
2.2.2	Frame Bundles	14
2.3	Tensors	15
2.3.1	Tensor Products	16
2.3.2	Tensor Contractions	17
2.3.3	Tensor Bundles and Tensor Fields	18
2.3.4	Dual Bundles	19
2.3.5	Tensor Products of Bundles	19
2.3.6	A Test for Tensorality	19
2.4	Metric Tensors	20
2.4.1	Riemannian Metrics	21
2.4.2	The Product Metric	22
2.4.3	Metric Contractions	22
2.4.4	Metrics on Bundles	22
2.4.5	Metric on Dual Bundles.....	23
2.4.6	Metric on Tensor Product Bundles.....	23
2.5	Connections	23
2.5.1	Covariant Derivative of Tensor Fields.....	25
2.5.2	The Second Covariant Derivative of Tensor Fields...	27

- 2.5.3 Connections on Dual and Tensor Product Bundles .. 28
- 2.5.4 The Levi–Civita Connection 29
- 2.6 Connection Laplacian 30
- 2.7 Curvature 30
 - 2.7.1 Curvature on Vector Bundles..... 30
 - 2.7.2 Curvature on Dual and Tensor Product Bundles 31
 - 2.7.3 Curvature on the Tensor Bundle 31
 - 2.7.4 Riemannian Curvature 33
 - 2.7.5 Ricci and Scalar Curvature 33
 - 2.7.6 Sectional Curvature 35
 - 2.7.7 Berger’s Lemma 36
- 2.8 Pullback Bundle Structure..... 37
 - 2.8.1 Restrictions 37
 - 2.8.2 Pushforwards 38
 - 2.8.3 Pullbacks of Tensors..... 38
 - 2.8.4 The Pullback Connection 39
 - 2.8.5 Parallel Transport 40
 - 2.8.6 Product Manifolds’ Tangent Space Decomposition .. 41
 - 2.8.7 Connections and Metrics on Subbundles 42
 - 2.8.8 The Taylor Expansion of a Riemannian Metric 43
- 2.9 Integration and Divergence Theorems 45
 - 2.9.1 Remarks on the Divergence Expression..... 46
- 3 Harmonic Mappings..... 49**
 - 3.1 Global Existence of Geodesics 49
 - 3.2 Harmonic Map Heat Flow 53
 - 3.2.1 Gradient Flow of E 54
 - 3.2.2 Evolution of the Energy Density 55
 - 3.2.3 Energy Density Bounds 56
 - 3.2.4 Higher Regularity..... 58
 - 3.2.5 Stability Lemma of Hartman 59
 - 3.2.6 Convergence to a Harmonic Map..... 61
 - 3.2.7 Further Results 62
- 4 Evolution of the Curvature 63**
 - 4.1 Introducing the Ricci Flow..... 63
 - 4.1.1 Exact Solutions 64
 - 4.1.2 Diffeomorphism Invariance..... 65
 - 4.1.3 Parabolic Rescaling of the Ricci Flow 66
 - 4.2 The Laplacian of Curvature 66
 - 4.2.1 Quadratic Curvature Tensor 67
 - 4.2.2 Calculating the Connection Laplacian ΔR_{ijkl} 67

4.3	Metric Variation Formulas	69
4.3.1	Interpreting the Time Derivative	69
4.3.2	Variation Formulas of the Curvature	71
4.4	Evolution of the Curvature Under the Ricci Flow	75
4.5	A Closer Look at the Curvature Tensor	78
4.5.1	Kulkarni–Nomizu Product	79
4.5.2	Weyl Curvature Tensor	80
4.5.3	Sphere Theorem of Huisken–Margerin–Nishikawa ...	81
5	Short-Time Existence	83
5.1	The Symbol	83
5.1.1	Linear Differential Operators	83
5.1.2	Nonlinear Differential Operators	85
5.2	The Linearisation of the Ricci Tensor	86
5.3	Ellipticity and the Bianchi Identities	86
5.3.1	Diffeomorphism Invariance of Curvature and the Bianchi Identities	88
5.4	DeTurck’s Trick	90
5.4.1	Motivation	90
5.4.2	Relating Ricci–DeTurck Flow to Ricci Flow	92
6	Uhlenbeck’s Trick	97
6.1	Abstract Bundle Approach	97
6.2	Orthonormal Frame Approach	98
6.2.1	The Frame Bundle	99
6.2.2	Time-Dependent Frame Bundles and the Ricci Flow	101
6.3	Time-Dependent Metrics and Vector Bundles Over $M \times \mathbb{R}$	104
6.3.1	Spatial Tangent Bundle and Time-Dependent Metrics	104
6.3.2	Alternative Derivation of the Evolution of Curvature Equation	107
7	The Weak Maximum Principle	115
7.1	Elementary Analysis	115
7.2	Scalar Maximum Principle	116
7.2.1	Lower Bounds on the Scalar Curvature	118
7.2.2	Doubling-Time Estimates	118
7.3	Maximum Principle for Symmetric 2-Tensors	119
7.4	Vector Bundle Maximum Principle	120
7.4.1	Statement of Maximum Principle	121
7.5	Applications of the Vector Bundle Maximum Principle	125
7.5.1	Maximum Principle for Symmetric 2-Tensors Revisited	125

7.5.2 Reaction-Diffusion Equation Applications 126

7.5.3 Applications to the Ricci Flow When $n = 3$ 129

8 Regularity and Long-Time Existence 137

8.1 Regularity: The Global Shi Estimates 137

8.2 Long-Time Existence 140

9 The Compactness Theorem for Riemannian Manifolds..... 145

9.1 Different Notions of Convergence..... 145

9.1.1 Convergence of Continuous Functions 146

9.1.2 The Space of C^∞ -Functions and the C^p -Norm..... 146

9.1.3 Convergence of a Sequence of Sections of a Bundle.. 147

9.2 Cheeger–Gromov Convergence..... 148

9.2.1 Expanding Sphere Example 149

9.2.2 The Rosenau Metrics..... 150

9.3 Statement of the Compactness Theorem..... 153

9.3.1 Statement of the Compactness Theorem for Flows .. 155

9.4 Proof of the Compactness Theorem for Flows..... 155

9.4.1 The Arzelà–Ascoli Theorem 156

9.4.2 The Proof 157

9.5 Blowing Up of Singularities 158

10 The \mathcal{F} -Functional and Gradient Flows 161

10.1 Introducing the Gradient Flow Formulation..... 161

10.2 Einstein-Hilbert Functional 163

10.3 \mathcal{F} -Functional 164

10.4 Gradient Flow of \mathcal{F}^m and Associated Coupled Equations.... 166

10.4.1 Coupled Systems and the Ricci Flow 168

10.4.2 Monotonicity of \mathcal{F} from the Monotonicity
of \mathcal{F}^m 170

11 The \mathcal{W} -Functional and Local Noncollapsing..... 173

11.1 Entropy \mathcal{W} -Functional 173

11.2 Gradient Flow of \mathcal{W} and Monotonicity 175

11.2.1 Monotonicity of \mathcal{W} from a Pointwise Estimate..... 177

11.3 μ -Functional..... 177

11.4 Local Noncollapsing Theorem 181

11.4.1 Local Noncollapsing Implies Injectivity
Radius Bounds..... 186

11.5 The Blow-Up of Singularities and Local Noncollapsing..... 187

11.6 Remarks Concerning Perel’man’s Motivation
From Physics..... 189

12 An Algebraic Identity for Curvature Operators 193

12.1 A Closer Look at Tensor Bundles 194

 12.1.1 Invariant Tensor Bundles 194

 12.1.2 Constructing Subsets in Invariant Subbundles 197

 12.1.3 Checking that the Vector Field Points
 into the Set 198

12.2 Algebraic Curvature Operators 199

 12.2.1 Interpreting the Reaction Terms 200

 12.2.2 Algebraic Relationships and Generalisations 204

12.3 Decomposition of Algebraic Curvature Operators 208

 12.3.1 Schur’s Lemma 209

 12.3.2 The Q -Operator and the Weyl Subspace 211

 12.3.3 Algebraic Lemmas of Böhm and Wilking 212

12.4 A Family of Transformations for the Ricci flow 215

13 The Cone Construction of Böhm and Wilking 223

13.1 New Invariant Sets 223

 13.1.1 Initial Cone Assumptions 224

13.2 Generalised Pinching Sets 230

 13.2.1 Generalised Pinching Set Existence Theorem 231

14 Preserving Positive Isotropic Curvature 235

14.1 Positive Isotropic Curvature 236

14.2 The 1/4-Pinching Condition and PIC 238

 14.2.1 The Cone $\widehat{C}_{\text{PIC}_k}$ 238

 14.2.2 An Algebraic Characterisation of the Cone $\widehat{C}_{\text{PIC}_2}$... 241

14.3 PIC is Preserved by the Ricci Flow 243

 14.3.1 Inequalities from the Second Derivative Test 245

14.4 PCSC is Preserved by the Ricci Flow 252

 14.4.1 The Mok Lemma 252

 14.4.2 Preservation of PCSC Proof 253

 14.4.3 Relating PCSC to PIC 254

14.5 Preserving PIC Using the Complexification 255

15 The Final Argument 259

15.1 Proof of the Sphere Theorem 259

15.2 Refined Convergence Result 260

 15.2.1 A Preserved Set Between $\widehat{C}_{\text{PIC}_1}$ and $\widehat{C}_{\text{PIC}_2}$ 262

 15.2.2 A Pinching Set Argument 265

A Gâteaux and Fréchet Differentiability 271

 A.1 Properties of the Gâteaux Derivative 272

B Cones, Convex Sets and Support Functions 275

 B.1 Convex Sets 275

 B.2 Support Functions 275

 B.3 The Distance From a Convex Set 276

 B.4 Tangent and Normal Cones 277

 B.5 Convex Sets Defined by Inequalities 277

C Canonically Identifying Tensor Spaces with Lie Algebras .. 281

 C.1 Lie Algebras 281

 C.2 Tensor Spaces as Lie Algebras 282

 C.3 The Space of Second Exterior Powers as a Lie Algebra 282

 C.3.1 The space $\wedge^2 V^*$ as a Lie Algebra 284
