

Contents

1	Introduction	1
1.1	What’s So Special About Digital Things?	2
1.2	Terminology	5
1.3	Summary	5
2	The Really Foolproof Solution for Digital Preservation	7
Part I Theory – The Concepts and Techniques Which Are Essential for Preserving Digitally Encoded Information		
3	Introduction to OAIS Concepts and Terminology	13
3.1	Preserve What, for How Long and for Whom?	13
3.2	What “Metadata”, How Much “Metadata”?	16
3.3	Recursion – A Pervasive Concept	26
3.4	Disincentives Against Digital Preservation	28
3.5	Summary	30
4	Types of Digital Objects	31
4.1	Simple vs. Composite	31
4.2	Rendered vs. Non-rendered	33
4.3	Static vs. Dynamic	38
4.4	Active vs. Passive	38
4.5	Multiple-Classifications	39
4.6	Summary	39
5	Threats to Digital Preservation and Possible Solutions	41
5.1	What Can Be Relied on in the Long-Term?	43
5.2	What Others Think About Major Threats to Digital Preservation	44
5.3	Summary	45
6	OAIS in More Depth	47
6.1	OAIS Conformance	49
6.2	OAIS Mandatory Responsibilities	50
6.3	OAIS Information Model	53
6.4	OAIS Functional Model	63

- 6.5 Information Flows and Layering 65
- 6.6 Issues Not Covered in Detail by OAIS 65
- 6.7 Summary 67
- 7 Understanding a Digital Object: Basic Representation**
- Information** 69
- Co-author Stephen Rankin
- 7.1 Levels of Application of Representation
 - Information Concept 69
- 7.2 Overview of Techniques for Describing Digital Objects 71
- 7.3 Structure Representation Information 75
- 7.4 Format Identification 96
- 7.5 Semantic Representation Information 97
- 7.6 Other Representation Information 101
- 7.7 Application to Types of Digital Objects 102
- 7.8 Virtualisation 112
- 7.9 Emulation 123
- 7.10 Summary 137
- 8 Preservation of Intelligibility of Digital Objects** 139
- Co-authors Yannis Tzitzikas, Yannis Marketakis,
and Vassilis Christophides
- 8.1 On Digital Objects and Dependencies 139
- 8.2 A Formal Model for the Intelligibility of Digital Objects 142
- 8.3 Modelling and Implementation Frameworks 163
- 8.4 Summary 166
- 9 Understandability and Usability of Data** 167
- 9.1 Re-Use of Digital Objects – Interoperability
and Preservation 168
- 9.2 Use of Existing Software 171
- 9.3 Creation of New Software 173
- 9.4 Without Software 173
- 9.5 Software as the Digital Object Being Preserved 174
- 9.6 Digital Archaeology, Digital Forensics and Re-Use 174
- 9.7 Multiple Objects 175
- 9.8 Summary 175
- 10 In Addition to Understanding It – What Is It?: Preservation**
- Description Information** 177
- 10.1 Introduction 177
- 10.2 Fixity Information 177
- 10.3 Reference Information 178
- 10.4 Context Information 184
- 10.5 Provenance Information 184
- 10.6 Access Rights Management 185
- 10.7 Summary 190

- 11 Linking Data and “Metadata”: Packaging** 191
 - 11.1 Information Packaging Overview 191
 - 11.2 Archival Information Packaging 192
 - 11.3 XFDU 193
 - 11.4 Summary 196
- 12 Basic Preservation Strategies** 197
 - 12.1 Description – Adding Representation Information 198
 - 12.2 Maintaining Access 198
 - 12.3 Migration/Transformation 200
 - 12.4 Summary 202
- 13 Authenticity** 203
 - 13.1 Background to Authenticity 204
 - 13.2 OAIS Definition of Authenticity 205
 - 13.3 Elements of the Authenticity Conceptual Model 208
 - 13.4 Overall Authenticity Model 212
 - 13.5 Authenticity Evidence 214
 - 13.6 Significant Properties 214
 - 13.7 Prototype Authenticity Evidence Capture Tool 221
 - 13.8 Summary 232
- 14 Advanced Preservation Analysis** 233

Co-author Esther Conway

 - 14.1 Preliminary Investigation of Data Holdings 234
 - 14.2 Stakeholder and Archive Analysis 235
 - 14.3 Defining a Preservation Objective 237
 - 14.4 Defining a Designated User Community 238
 - 14.5 Preservation Information Flows 240
 - 14.6 Preservation Strategy Topics 243
 - 14.7 Preservation Plans 245
 - 14.8 Cost/Benefit/Risk Analysis 245
 - 14.9 Preservation Analysis Summary 246
 - 14.10 Preservation Analysis and Representation Information
in More Detail 246
 - 14.11 Network Modelling Approach 247
 - 14.12 Summary 264
- Part II Practice – Use and Validation of the Tools and
Techniques that Can Be Used for Preserving Digitally
Encoded Information**
- 15 Testing Claims About Digital Preservation** 267
 - 15.1 “Accelerated Lifetime” Testing of Digital Preservation
Techniques 267
 - 15.2 Summary 269

16	Tools for Countering the Threats to Digital Preservation	271
16.1	Key Preservation Components and Infrastructure	272
16.2	Discipline Independent Aspects	276
16.3	Discipline Dependence: Toolboxes/Libraries	284
16.4	Key Infrastructure Components	284
16.5	Information Package Management	285
16.6	Information Access	287
16.7	Designated Community, Knowledge and Provenance Management	287
16.8	Communication Management	288
16.9	Security Management	289
17	The CASPAR Key Components Implementation	291
17.1	Design Considerations	291
17.2	Registry/Repository of Representation Information Details	291
17.3	Virtualizer	297
17.4	Knowledge Gap Manager	301
17.5	Preservation Orchestration Manager	303
17.6	Preservation DataStores	305
17.7	Data Access and Security	315
17.8	Digital Rights Management Details	318
17.9	Find – Finding Manager	321
17.10	Information Packaging Details	322
17.11	Authenticity Manager Toolkit	332
17.12	Representation Information Toolkit	333
17.13	Key Components – Summary	335
17.14	Integrated tools	337
18	Overview of the Testbeds	341
18.1	Typical Preservation Scenarios	341
18.2	Generic Criteria and Method to Organise and to Evaluate the Testbeds	342
18.3	Cross References Between Scenarios and Changes	343
19	STFC Science Testbed	345
19.1	Dataset Selection	345
19.2	Challenges Addressed	345
19.3	Preservation Aims	347
19.4	Preservation Analysis	347
19.5	MST RADAR Scenarios	347
19.6	Ionosonde Data and the WDC Scenarios	361
19.7	Summary of Testbed Checks	366
20	European Space Agency Testbed	367
20.1	Dataset Selection	369
20.2	Challenge Addressed	370
20.3	Preservation Aim	372

20.4	Preservation Analysis	372
20.5	Scenario ESA1 – Operating System Change	372
20.6	Additional Workflow Scenarios	384
20.7	Conclusions	386
21	Cultural Heritage Testbed	387
21.1	Dataset Selection	388
21.2	Challenges Addressed	396
21.3	Preservation Aim	396
21.4	Preservation Analysis	396
21.5	Scenario UNESCO1: Villa LIVIA	397
21.6	Related Documentation	406
21.7	Other Misc Data with a Brief Description	406
21.8	Glossary	406
22	Contemporary Performing Arts Testbed	407
22.1	Historical Introduction to the Issue	407
22.2	An Insight into Objects	409
22.3	Challenges of Preservation	411
22.4	Preserving the Real-Time Processes	412
22.5	Interactive Multimedia Performance	419
22.6	CIANT Testbed	426
22.7	Summary	428
 Part III Is Money Well Spent? Cutting the Cost and Making Sure Money Is Not Wasted		
23	Sharing the Effort	431
23.1	Chain of Preservation	431
23.2	Mechanisms for Sharing the Burden of Preservation	431
24	Infrastructure Roadmap	435
24.1	Requirements for a Science Data Infrastructure	435
24.2	Possible Financial Infrastructure Concepts and Components	436
24.3	Possible Organisational and Social Infrastructure Concepts and Components	437
24.4	Possible Policy Infrastructure Concepts and Components	446
24.5	Virtualisation of Policies, Resources and Processes	448
24.6	Technical Science Data Concepts and Components	449
24.7	Aspects Excluded from This Roadmap	456
24.8	Relationship to Other Infrastructures	457
24.9	Summary	459
25	Who Is Doing a Good Job? Audit and Certification	461
25.1	Background	461
25.2	TRAC and Related Documents	463

25.3	Development of an ISO Accreditation and Certification Process	464
25.4	Understanding the ISO Trusted Digital Repository Metrics	465
25.5	Summary	480
26	Final Thoughts	481
	References	483
	Contributors	495
	Index	505
