Part II: Cognitive Perspective

Preface to Part II ............................................ 135
Eric Knuth and Jinfa Cai

Algebraic Thinking with and without Algebraic Representation:
A Pathway for Learning ....................................... 137
Murray S. Britt and Kathryn C. Irwin
Introduction .................................................. 138
Children’s Understanding of Generalities for Operations
Before Schooling ............................................. 139
Algebraic Thinking and the New Zealand Numeracy Project 140
Students’ Algebraic Thinking in the Last Year of Intermediate
School (Age 11–12) .......................................... 146
The Growth of Algebraic Thinking from Numbers to Symbols:
A Longitudinal Study ....................................... 147
Discussion ..................................................... 152
A Pathway for Algebraic Thinking ........................... 153
References ..................................................... 157

Examining Students’ Algebraic Thinking in a Curricular Context:
A Longitudinal Study ....................................... 161
Jinfa Cai, John C. Moyer, Ning Wang, and Bikai Nie
Standards-Based and Traditional Curricula in the United States 162
LieCal Project .................................................. 163
Highlights of the Differences between CMP and Non-CMP
Curricula ..................................................... 164
Defining Variables .......................................... 165
Defining Equations ......................................... 165
Introducing Equation Solving ................................ 166
Using Mathematical Problems ............................ 168
Highlights of the Differences between CMP and Non-CMP
  Classroom Instruction ........................................... 169
  Conceptual and Procedural Emphases .......................... 170
  Instructional Tasks .............................................. 171

Students’ Development of Algebraic Thinking: Methodological
  Considerations .................................................. 172
  The Focus of Algebraic Thinking ............................... 173
  Tasks and Data Analysis ..................................... 174

Findings about the Development of Students’ Algebraic Thinking .. 174
  Representing Situations ....................................... 175
  Solving Equations ............................................. 177
  Making Generalizations ....................................... 178

Conclusions and Instructional Implications ..................... 180

Algebra in the Middle School: Developing Functional Relationships
  Through Quantitative Reasoning ................................. 215
  Amy B. Ellis
  What Is Quantitative Reasoning? ............................... 216
  The Importance of (and Difficulties with) Functional Thinking . 218
  An Alternative Approach to Function: Quantities and Covariation . 222
  A Flexible Understanding of Functions ........................ 226
    Coordinating Covariation and Correspondence Approaches . 226
    Flexibility Across Forms ................................... 230
Representational Competence and Algebraic Modeling .................................. 239
Andrew Izsák
Early Results on Students’ Understandings of Standard Representations in Algebra ........................................ 241
Theoretical Accounts of Reasoning with External Representations .... 241
Students’ Capacities to Reason with External Representations .......... 243
First Result: Criteria for Evaluating External Representations ......... 244
Second Result: Adaptive Interpretation .............................................. 249
Conclusion .................................................. 253
References ................................................. 256

Middle School Students’ Understanding of Core Algebraic Concepts:
Equivalence & Variable ................................................................. 259
Eric J. Knuth, Martha W. Alibali, Nicole M. McNeil, Aaron Weinberg,
and Ana C. Stephens
Introduction ................................................................. 260
Student Understanding of Equivalence & Variable ......................... 261
Equivalence ........................................................................ 261
Variable ............................................................................ 262
Method ............................................................................... 262
Participants ........................................................................ 262
Data Collection ................................................................. 263
Coding ............................................................................... 264
Results .......................................................... 266
Interpretation of the Equal Sign .................................................. 266
Performance on the Equivalent Equations Problem ....................... 267
Interpretation of a Literal Symbol ............................................... 270
Performance on the which Is Larger Problem ............................ 271
Discussion ........................................................... 273
Equivalence Results ............................................................. 273
Variable Results ............................................................... 274
Concluding Remarks .......................................................... 275
References ............................................................... 275

An Approach to Geometric and Numeric Patterning that Fosters
Second Grade Students’ Reasoning and Generalizing about Functions
and Co-variation ................................................................. 277
Joan Moss and Susan London McNab
Introduction ................................................................. 277
Our Project ................................................................. 279
Our Approach: Theoretical .................................................. 279
Instructional Sequence ....................................................... 281
Visual Representation: Geometric Growing Patterns .................. 281
Numeric Representations: Function Machine 282
Integration Activities: Pattern Sidewalk 283
Role of the Teacher 284
Procedures and Measures: Grade 2 Interventions 285
Results 285
Finding Rules for Patterns and Generating Patterns Based on Given Rules 286
Constructing a Pattern from a Rule: “A number times two, plus one’ pattern?” 286
Finding a Rule for a Given Pattern: “Position number times three, plus one” 287
Students’ Invention of Multiplication 288
Deconstructing Multiplication: “Double the position, plus the position” 289
Using a Structural Understanding of Multiplication to Predict Far Positions: “It’s 40 up, and 3 to the side” 289
The Discovery of Zero 291
Zero as a Coefficient: “Zero groups of 4 million is zero” 291
Zero as a Position Number: “the zero-th position” 292
Transfer of Structure 293
Circumventing Whole Object Reasoning 293
Informal Algebraic Expressions of Rules in the Sparky Problem 294
Discussion 295
The Curriculum with Its Focus on Integration 296
Prioritizing Visual Representations of Pattern 297
Pedagogy and Student Inventions 297
Concluding Thoughts 298
References 298

Grade 2 Students’ Non-Symbolic Algebraic Thinking 303
Luis Radford
Introduction 303

Formation of Pattern Generalization Involving Linear Figural Patterns Among Middle School Students: Results of a Three-Year Study 323
F.D. Rivera and Joanne Rossi Becker
Anticipating What Is to Come: Initial Reflections on Our Three-Year Data from the Clinical Interviews 327
Cognitive Issues Surrounding Pattern Generalization: What We Know from Various Theoretical Perspectives and Empirical Studies

Clarifying the Definition of Pattern Generalization

Types of Algebraic Generalization Involving Figural Patterns

Methodology

Classroom Contexts from Years 1 to 3 of the Study

Nature and Content of Classroom Teaching Experiments in Years 1 and 2

Nature and Content of Classroom Teaching Experiments in Year 3

Nature and Content of Clinical Interview Tasks from Years 1 to 3

Data Collection and Analysis and Relevant Study Protocols

Findings and Discussion Part 1: Accounting for Constructive and Deconstructive Generalizations

Findings and Discussion Part 2: Understanding the Operations Needed in Developing a Pattern Generalization

Findings and Discussion Part 3: Factors Affecting Students’ Ability to Develop CGs

Findings and Discussion Part 4: A Three-Year Account of Classroom Mathematical Practices that Encouraged the Formation of Generalization Among Our Middle School Students

Year 1 Classroom Practices: From Figurally- to Numerically-Driven CSGs

Year 2 Practice: Continued Use of Numerically-Driven CSGs and a Refinement in the Case of Decreasing Linear Patterns

Year 3 Practices: A Third Shift Back to Figural-based Generalization and the Consequent Occurrence of CSGs, CNGs, and DGs

Findings and Discussion Part 5: Middle School Students’ Capability in Justifying CSGs

Findings and Discussion Part 6: Middle School Students’ Capability in Constructing and Justifying CNGs and DGs

Conclusion
