

Contents

Preface: What is Mathematics?	vii
Welcome!	ix
Structure and Randomness in the Prime Numbers	1
Terence Tao	
How to Solve a Diophantine Equation	9
Michael Stoll	
From Sex to Quadratic Forms	21
Simon Norton	
Small Divisors: Number Theory in Dynamical Systems	43
Jean-Christophe Yoccoz	
How do IMO Problems Compare with Research Problems? <i>Ramsey Theory as a Case Study</i>	55
W. Timothy Gowers	
How do Research Problems Compare with IMO Problems? <i>A Walk Around Games</i>	71
Stanislav Smirnov	
Graph Theory Over 45 Years	85
László Lovász	
Communication Complexity	97
Alexander A. Razborov	
Ten Digit Problems	119
Lloyd N. Trefethen	

The Ever-Elusive Blowup in the Mathematical Description of Fluids	137
Robert M. Kerr and Marcel Oliver	
About the Hardy Inequality	165
Nader Masmoudi	
The Lion and the Christian, and Other Pursuit and Evasion Games	181
Béla Bollobás	
Three Mathematics Competitions	195
Günter M. Ziegler	
Complex Dynamics, the Mandelbrot Set, and Newton's Method — or: On Useless and Useful Mathematics	207
Dierk Schleicher

An Invitation to Mathematics

From Competitions to Research

Schleicher, D.; Lackmann, M. (Eds.)

2011, XIV, 220 p. 56 illus., 31 illus. in color., Softcover

ISBN: 978-3-642-19532-7
