

Contents

1	Introduction	1
2	The Principles of Quantum Mechanics	5
2.1	Classical Physics	5
2.2	Mathematical Framework of Quantum Mechanics	6
2.3	Basic Principles of Quantum Mechanics	9
2.4	Measurement Process	12
2.4.1	The Concept of Measurement	12
2.4.2	Quantum Measurements	13
2.5	Some Experimental Consequences of the Basic Principles	15
2.5.1	Thought Experiments	15
2.5.2	Real Two-Slit Experiments	19
2.6	Other Consequences of the Basic Principles	21
2.6.1	Commutation Relations and the Uncertainty Principle	21
2.6.2	No-Cloning Theorem	23
2.6.3	Commutation Relations and Poisson Brackets	24
2.7*	Properties of Hilbert Spaces and Operators	25
2.7.1*	Some Properties of Hermitian Operators	27
2.7.2*	Unitary Transformations	28
2.8*	Notions on Probability Theory	29
	Problems	30
3	The Heisenberg Realization of Quantum Mechanics	33
3.1	Matrix Formalism	33
3.1.1	A Realization of the Hilbert Space	33
3.1.2	Solution of the Eigenvalue Equation	35
3.2	Two-Dimensional Spaces	36

3.3	Harmonic Oscillator	39
3.3.1	Solution of the Eigenvalue Equation	39
3.3.2	Some Properties of the Solution	42
3.4	The Jaynes–Cummings Model	44
	Problems	45
4	The Schrödinger Realization of Quantum Mechanics	47
4.1	Time-Independent Schrödinger Equation	47
4.1.1	Probabilistic Interpretation of Wave Functions	49
4.2	The Harmonic Oscillator Revisited	51
4.2.1	Solution of the Schrödinger Equation	52
4.2.2	Spatial Features of the Solutions	53
4.3	Free Particle	55
4.4	One-Dimensional Bound Problems	57
4.4.1	Infinite Square Well Potential. Electron Gas	57
4.4.2	Finite Square Well Potential	59
4.5	One-Dimensional Unbound Problems	61
4.5.1	One-Step Potential	61
4.5.2	Square Barrier	64
4.5.3	Scanning Tunneling Microscope	66
4.6 [†]	Band Structure of Crystals	68
	Problems	70
5	Motion in Angular Subspace	73
5.1	Eigenvalues and Eigenstates	74
5.1.1	Matrix Treatment	74
5.1.2	Treatment Using Position Wave Functions	75
5.2	Spin	77
5.2.1	Stern–Gerlach Experiment	77
5.2.2	Spin Formalism	79
5.3	Other Features of the Motion in Angular Subspace	81
5.3.1	Addition of Angular Momenta	81
5.3.2 [†]	Rotations	83
5.3.3 [†]	The Wigner–Eckart Theorem	84
5.4*	Details of the Matrix Treatment	85
5.5*	Details of the Treatment of Orbital Angular Momentum	87
5.6*	Coupling with Spin $s = 1/2$	89
	Problems	89
6	Three-Dimensional Hamiltonian Problems	93
6.1	Central Potentials	93
6.1.1	Coulomb and Harmonic Oscillator Potentials	94
6.1.2	Rydberg Atoms	96
6.2	Spin–Orbit Interaction	97

6.3	Some Elements of Scattering Theory	99
6.3.1	Boundary Conditions	99
6.3.2	Expansion in Partial Waves.....	100
6.3.3	Cross Sections	101
6.4*	Solutions to the Coulomb and Oscillator Potentials.....	102
6.5*	Some Properties of Spherical Bessel Functions	105
	Problems	106
7	Many-Body Problems	109
7.1	The Pauli Principle.....	110
7.2	Two-Electron Problems.....	113
7.3	Periodic Tables	114
7.3.1	The Atomic Case.....	114
7.3.2	The Nuclear Case	116
7.4	Motion of Electrons in Solids	118
7.4.1	Electron Gas.....	118
7.4.2 [†]	Band Structure of Crystals	120
7.4.3 [†]	Transistors.....	121
7.4.4 [†]	Phonons in Lattice Structures	122
7.4.5 [†]	Quantum Dots.....	125
7.5 [†]	Bose–Einstein Condensation	127
7.6 [†]	Quantum Hall Effects	129
7.6.1 [†]	Integer Quantum Hall Effect	130
7.6.2 [†]	Fractional Quantum Hall Effect.....	133
7.7 [†]	Quantum Statistics	134
7.8 [†]	Occupation Number Representation (Second Quantization)	136
	Problems	139
8	Approximate Solutions to Quantum Problems	141
8.1	Perturbation Theory.....	141
8.2	Variational Procedure	144
8.3	Ground State of the He Atom	144
8.4	Molecules	145
8.4.1	Intrinsic Motion: Covalent Binding	145
8.4.2	Vibrational and Rotational Motions.....	147
8.4.3	Characteristic Energies	149
8.5	Approximate Matrix Diagonalizations.....	150
8.5.1 [†]	Approximate Treatment of Periodic Potentials	151
8.6	Independent-Particle Approximations	152
8.6.1 [†]	The Hartree–Fock Approximation	152
8.6.2 [†]	The Random–Phase Approximation (RPA)	154
8.7*	Matrix Elements Involving the Inverse of the Interparticle Distance	156
	Problems	157

9	Time Dependence in Quantum Mechanics	161
9.1	The Time Principle	161
9.2	Time Dependence of Spin States	164
9.2.1	Larmor Precession	164
9.2.2	Magnetic Resonance	165
9.3	Sudden Change in the Hamiltonian	167
9.4	Time-Dependent Perturbation Theory	168
9.5	Energy–Time Uncertainty Relation	169
9.6 [†]	The Heisenberg Picture	171
9.7 [†]	Time-Reversal Symmetry	172
9.8 [†]	Quantum Electrodynamics for Newcomers	172
9.8.1 [†]	Classical Description of the Radiation Field	173
9.8.2 [†]	Quantization of the Radiation Field	174
9.8.3 [†]	Interaction of Light with Particles	176
9.8.4 [†]	Emission and Absorption of Radiation	177
9.8.5 [†]	Selection Rules	178
9.8.6 [†]	Lasers and Masers	179
	Problems	181
10	Broken Symmetries	183
10.1	The BCS Theory of Superconductivity	184
10.1.1 [†]	The Conjugate Variable to the Number of Particles	184
10.1.2 [†]	The Monopole Pairing Operator and the Hamiltonian	186
10.1.3 [†]	The BCS Hamiltonian	187
10.1.4 [†]	The Ground State	190
10.1.5 [†]	The Excitation Spectrum	190
10.1.6 [†]	Collective sector. Rotational Bands. Josephson Junctions	194
10.2	Quantization with Constraints	195
10.2.1	Constraints	195
10.2.2	Outline of the BRST Solution	197
10.2.3 [†]	A Presentation of the BRST Symmetry for the Abelian Case	199
10.2.4 [†]	Application of the BRST Formalism to the Abelian Toy Model	200
10.3	Generalizations	203
	Problems	204
11	Eigenvectors of the Position Operator Path Integral Formulation	207
11.1 [†]	Eigenvectors of the Position Operator and the Delta Function	207
11.2 [†]	The Propagator	209
11.2.1 [†]	The Free Particle Propagator	210
11.3 [†]	Path Integral Formulation of Quantum Mechanics	211

- 11.3.1[†] The Harmonic Oscillator Re-revisited.
The Path Integral Calculation 214
- 11.3.2* The Classical Action and the Quantum
Correction to the Harmonic Oscillator 215
- 12 Entanglement and Experimental Tests of Quantum Mechanics** 219
 - 12.1 Entanglement 220
 - 12.2 The Bell States 221
 - 12.3 Experimental Tests of Quantum Mechanics 222
 - 12.3.1 Two-Slit Experiments Revisited 223
 - 12.3.2 EPR and Bell Inequalities 225
 - 12.3.3 Single Quantum Systems 227
 - 12.3.4 A Quantum, Man-Made Mechanical Object 230
- 13 Quantum Information** 233
 - 13.1 Conceptual Framework 233
 - 13.2 Quantum Cryptography 234
 - 13.3 Teleportation 235
 - 13.4[†] Quantum Computation 237
 - 13.4.1[†] Factorization 237
 - 13.5* Quantum Gates 239
 - 13.5.1* One-Qubit Systems 240
 - 13.5.2* Two-Qubit Systems 241
 - 13.5.3* n -Qubit Systems 242
 - Problems 243
- 14 Interpretations of Measurements. Decoherence. Density Matrix** 245
 - 14.1 Orthodox Interpretations 245
 - 14.1.1 The Standard Interpretation 246
 - 14.1.2 The Copenhagen Interpretation 247
 - 14.2[†] The Emergence of Classicality from the Quantum
Substrate. Decoherence 247
 - 14.2.1[†] A Mathematical Model of Decoherence 249
 - 14.2.2[†] An Experiment with Decoherence 251
 - 14.3[†] Quantum Measurements 252
 - 14.4 The Density Matrix 254
 - 14.4.1 Mixed Density Matrix 255
 - 14.4.2 Reduced Density Matrix 257
 - Problems 258
- 15 A Brief History of Quantum Mechanics** 259
 - 15.1 Social Context in Central Europe During the 1920s 259
 - 15.2 Pre-history of Quantum Physics ($1860 \leq t \leq 1900$) 260
 - 15.3 Old Quantum Theory ($1900 \leq t \leq 1925$) 261
 - 15.3.1 Radiation 261
 - 15.3.2 Matter 263
 - 15.4 Quantum Mechanics ($1925 \leq t \leq 1928$) 265

15.5	Philosophical Aspects	267
15.5.1	Complementarity Principle	267
15.5.2	Discussions Between Bohr and Einstein.....	268
15.6	Recent Quantum Mechanics.....	271
A	Solutions to Problems and Physical Constants	275
References	287
