5 Modeling and Simulation of Technological Processes for Producing and Refining Steel 211

5.1 Mathematical Modeling of Steel Smelting Processes 211

5.2 Development of a Mathematical Model of the Ladle Refinement of a Metal by a Synthetic Slag. 218

5.3 Predicting the Composition of the Metal in the Head Part of an Ingot During the Teeming of Steel Under Siliceous Heat-Generating Mixtures. 225

5.4 Development of Mathematical Models of Refining Remelts 232

5.4.1 Mathematical Model of the Alloying of a Metal with Nitrogen During Plasma Arc Remelting 232

5.4.2 Mathematical Model of the Interaction of the Metal, Slag, and Gas During Vacuum Arc Remelting 241

5.4.3 Mathematical Model of the Physicochemical Processes in the Electron-Beam Remelting of Alloys. 250

5.5 Conclusion 260

References 261

6 Modeling and Simulation of Welding, Surfacing and Coating Processes 265

6.1 Mathematical Modeling of Phase Interaction Processes in Electroslag Technologies 265

6.1.1 Fundamentals of the Mathematical Model of the Phase Interaction in Electroslag Technologies. 266

6.1.2 Mathematical Model of the Chemical Processes Occurring in the Electroslag Remelting of Steels 268

6.1.3 Mathematical Modeling of the Chemical Processes Occurring in Electroslag Welding and Surfacing. 275

6.1.4 Allowing for Deoxidization of the Slag Pool by Metallic Components in Electroslag Technologies 277

6.1.5 Mathematical Model of the Chemical Processes Occurring in Centrifugal Electroslag Casting 279

6.2 Calculated Evaluation of the Kinetics of the Interaction of a Multicomponent Metal and a Slag During Submerged-Arc Welding 286

6.3 Simulation of the Interaction Processes in Submerged-Arc Welding with a Ceramic Flux 294

6.4 Mathematical Model of the Kinetics of the Chemical Processes Occurring in Gas Welding 299

6.5 Calculation of the Composition of the Metal and the Slag During the Melting of Coated Electrodes and Flux-Cored Wires 302

6.6	Mathematical Model of the Motion, Heating, and Oxidation Processes Occurring in Electric-Arc Spraying	304
6.7	Conclusions	319
