

Contents

1	Physical Properties of Unconventional Superconductors	1
1.1	Cuprate Superconductors.....	1
1.1.1	Atomic Structure and Classification.....	2
1.1.2	Theoretical Models.....	6
1.2	Borocarbides.....	10
1.2.1	Crystal Structure and T_c	13
1.2.2	The Electronic Structure.....	13
1.3	Magnesium Diboride.....	15
1.3.1	Crystal Structure.....	16
1.3.2	Electronic and Band Structure.....	17
1.4	Oxypnictides.....	19
1.4.1	Atomic Structure and Classification.....	21
1.4.2	Electronic and Band Structure.....	24
2	Ginzburg–Landau Analysis of Multiband and Anisotropic Superconductors	27
2.1	GL Equations for Two-Band Isotropic Superconductors.....	28
2.1.1	Upper Critical Field $H_{c2}(T)$	30
2.1.2	Surface Magnetic Field $H_{c3}(T)$	34
2.1.3	Lower Critical Field $H_{c1}(T)$	37
2.1.4	Upper Critical Field H_{c2} of Thin Films.....	39
2.1.5	Magnetization of Two-Band Superconductors Near H_{c2}	41
2.1.6	Flux Quantization.....	42
2.1.7	Little-Parks Effect in Two-Band Superconductors.....	42
2.1.8	Thermodynamic Magnetic Field $H_{cm}(T)$ and Specific Heat Jump $\frac{\Delta C}{C_N}$	43
2.1.9	Critical Current Density $J_c(T)$	45
2.2	Anisotropy Effects in Two-Band GL Theory.....	47
2.2.1	Layered Two-Band GL Equations.....	47
2.2.2	Anisotropy Effect on Upper Critical Field in Layered Two-Band Superconductors.....	49

2.2.3	Effects of Anisotropy on London Penetration Depth	51
2.2.4	Single Vortex in Two-Band Layered Superconductor	53
2.2.5	Surface Magnetic Field in Anisotropic Two-Band GL Theory	56
2.2.6	Angular Effects in Two-Band GL Theory	57
2.3	d-Wave GL Equations	62
2.3.1	Upper Critical Field of d-Wave Superconductors	64
2.3.2	Single Vortex in d-Wave Superconductor	66
2.3.3	Nonlinear Magnetization in d + s Wave Superconductors	68
2.3.4	Vortex Lattice in d-Wave Superconductors	69
2.4	GL-Like Theory in Application to Cuprate Superconductors	71
2.4.1	Transition Temperature $T_c(x)$	73
2.4.2	Superfluid Density	73
2.4.3	Specific Heat	74
2.5	GL Theory of Dirty Two-Band Superconductors	75
2.6	Time-Dependent Two-Band GL Equations	77
2.6.1	Two-Band s-Wave Superconductors	77
2.6.2	Time-Dependent d-Wave GL Equations	82
2.6.3	1.5 Type Superconductivity	84
2.7	Coexistence Antiferromagnetism and Superconductivity: GL Description	86
2.8	Application of GL Equations to Nanosize Superconductors	88
3	Anisotropic Eliashberg Equations and Influence of Multiband Effects	95
3.1	Single-Band Isotropic Eliashberg Equations and BCS Limit	96
3.2	Eliashberg Equations for Single Band Layered Superconductors	98
3.3	Eliashberg Equations for Two-Band Isotropic Superconductors	103
3.4	Effects of Nonadiabacity in Layered Systems	106
3.5	Effect of Coulomb Repulsion in Layered Single-Band Superconductors with Arbitrary Thickness of Layers	111
3.6	Plasmon Spectrum of Layered Superconductors	115
3.7	Specific Heat Jump of Layered Superconductors	119
3.8	d-Wave Single Band BCS Theory	122
3.9	Properties of Two-Band Isotropic Superconductors in BCS Theory	124
3.9.1	Critical Temperature	125
3.9.2	Specific Heat of Two-Band Superconductors	128
3.9.3	Upper Critical Field H_{c2} in Two-Band Superconductors	130
3.10	Nanosize Two-Gap Superconductivity	134
3.11	Effect of Nonadiabacity in Two-Band Superconductors	136
3.12	Leggett's Mode in Two-Band Superconductors	138

4 Fluctuation Effects in Anisotropic and Multiband Superconductors 141

4.1 Fluctuations of Specific Heat in GL Theory 141

 4.1.1 Single-Band Isotropic GL Theory 141

 4.1.2 Fluctuation of Specific Heat in Two-Band Isotropic Superconductors 143

 4.1.3 Influence of External Magnetic Field on Specific Heat Jump 145

4.2 The Diamagnetic Susceptibility $T > T_c$ 147

4.3 Fluctuation of Conductivity Near T_c 149

4.4 Fluctuation Effects in Layered Superconductors 151

 4.4.1 Influence Phase Fluctuations on Critical Temperature in Layered Superconductors 153

4.5 Post-Gaussian Fluctuations in Superconductors 155

4.6 GL Theory for Layered Superconductors with Small Coherence Length 157
