## Contents

1 Introduction ........................................ 1  
References ........................................ 6  

2 Mathematical Models of Flow in Porous Media ............... 9  
   2.1 Fundamental Concepts .............................. 10  
      2.1.1 Wettability and Capillarity .................. 10  
      2.1.2 Volume Fractions and Saturations .......... 13  
      2.1.3 Fluid Potentials ............................... 14  
      2.1.4 Capillary Function ............................ 16  
      2.1.5 Darcy Equation ................................. 21  
      2.1.6 Relative Permeability Functions ............. 23  
      2.1.7 Density and Viscosity of Fluids ............. 26  
   2.2 Governing Equations for Fluid Flow ................. 27  
      2.2.1 Two-Phase Flow ................................. 27  
      2.2.2 Richards Equation .............................. 30  
      2.2.3 Single-Phase Flow .............................. 35  
   2.3 Auxiliary Conditions ............................... 36  
      2.3.1 Initial Conditions ............................. 36  
      2.3.2 Boundary Conditions ......................... 39  
      2.3.3 Conditions at Material Interfaces .......... 41  
References ........................................ 44  

3 Numerical Solution of Flow Equations .......................... 49  
   3.1 Basic Properties of Numerical Discretization Schemes ... 50  
   3.2 Spatial Discretization ................................ 53  
      3.2.1 Finite Difference Method ..................... 53  
      3.2.2 Finite Element Method ....................... 57  
      3.2.3 Cell-Centred Finite Volume Method .......... 66  
      3.2.4 Vertex-Centred Finite Volume Method ....... 70
3.3 Solution of Semi-Discrete Equations ................................. 75
  3.3.1 Discretization in Time ........................................ 75
  3.3.2 Linearization .................................................. 77
  3.3.3 Selection of Time Step Size ................................. 84
  3.3.4 Solution of Linear Systems ................................. 85
References ........................................................................ 86

4 Computation of Inter-Nodal Permeabilities for Richards Equation .................................. 91
  4.1 Overview of Averaging Approaches for One-Dimensional Flow ................................. 91
    4.1.1 Simple Averaging Methods .................................. 92
    4.1.2 Direction Dependent Methods ............................. 94
    4.1.3 Darcian Means ............................................... 96
  4.2 Improved Approximation Scheme ................................... 100
    4.2.1 Infiltration .................................................... 102
    4.2.2 Drainage ....................................................... 105
    4.2.3 Capillary Rise ............................................... 107
    4.2.4 Implementation Issues ..................................... 109
    4.2.5 Evaluation for Steady Flow ............................... 110
    4.2.6 Evaluation for Unsteady Flow ............................ 114
  4.3 Saturated–Unsaturated Transition .................................. 118
  4.4 Heterogeneous Medium ............................................. 120
  4.5 Multidimensional Problems ....................................... 129
  4.6 Two-Phase Flow ................................................... 133
References ........................................................................ 136

5 Upscaling from Darcy Scale to Field Scale .......................................................... 139
  5.1 Heterogeneity Patterns .............................................. 140
  5.2 Overview of Upscaling Approaches ................................ 142
  5.3 Permeability Upscaling for Steady Single-Phase Flow ................... 145
    5.3.1 Algebraic Averaging ......................................... 146
    5.3.2 Effective Medium Theory .................................. 149
    5.3.3 Direct Solution of Steady Flow Equation ............... 153
  5.4 Upscaling of Transient Two-Phase Flow ................................ 160
    5.4.1 Local Equilibrium and Quasi Steady-State Models .... 160
    5.4.2 Local Non-Equilibrium Models ............................ 164
References ........................................................................ 170

6 Flow in Binary Media with Heterogeneous Hydraulic Diffusivity ................................ 177
  6.1 Periodic Homogenization Method .................................. 177
  6.2 Basic Assumptions .................................................. 179
6.3 Upscaled Models for Different Diffusivity Ratios . . . . . . . . . . . 183
  6.3.1 Moderately Heterogeneous Medium .......................... 183
  6.3.2 Weakly Permeable Inclusions: Local Equilibrium ...... 186
  6.3.3 Weakly Permeable Inclusions:
      Local Non-Equilibrium .................................. 188
  6.3.4 Quasi-Impermeable Inclusions .............................. 190
  6.3.5 Highly Permeable Inclusions .............................. 191
6.4 Generalized Formulation ....................................... 192
6.5 Numerical Implementation ..................................... 194
6.6 Comparison with Darcy-Scale Numerical Solutions ........... 199
6.7 Comparison with Experiment ................................. 205
  6.7.1 Experimental Setup .................................. 205
  6.7.2 Material Parameters .................................. 206
  6.7.3 Results .............................................. 210
References .................................................................. 212

7 Flow in Binary Media with Heterogeneous Air-Entry Pressure . . 215
  7.1 Upscaled Model of Two-phase Capillary Flow ................. 215
    7.1.1 Basic Assumptions .................................. 215
    7.1.2 Capillary Flow without Entry Pressure Effects .... 217
    7.1.3 Infiltration with Entry Pressure Effects .......... 218
    7.1.4 Drainage with Entry Pressure Effects ........... 221
    7.1.5 Modified Richards Equation ....................... 223
  7.2 Numerical simulations ....................................... 224
    7.2.1 Geometry and Material Parameters .................. 225
    7.2.2 Example 1: Fluctuating Water Table ................. 227
    7.2.3 Example 2: Two-Dimensional Infiltration .......... 231
References ........................................................... 234

8 Summary ............................................................. 235
Modelling Water Flow in Unsaturated Porous Media
Accounting for Nonlinear Permeability and Material Heterogeneity
Szymkiewicz, A.
2013, XXII, 238 p., Hardcover
ISBN: 978-3-642-23558-0
