1 Introduction ................................................................. 1
  1.1 Types of Homogeneous Catalysis with Metal Complexes,
      Their Advantages and Drawbacks ............................. 1
  1.2 Perspectives of the Industrial Use of Homogeneous
      Catalysis with Metal Complexes ............................... 5
References ................................................................. 9

2 Homogeneous Redox Catalysis with Transition Metal
Compounds in Oxide and Peroxide Systems ...................... 11
  2.1 General Principles of Catalytic Redox Reactions
      with Metal Compounds ........................................... 11
  2.2 Intermediate Compounds, O_2 Molecule Activation,
      and Free Radicals in the Catalysis of Oxidation Processes .... 17
    2.2.1 Nature of Forming Intermediate Compounds ............. 17
    2.2.2 Oxygen Molecule Activation: Intermediate
          Species, and Free Radicals .................................. 20
    2.2.3 Peroxocomplexes of Some Metals ......................... 43
  2.3 Theoretical Aspects of Catalysis with Metal Complexes ...... 46
    2.3.1 Influence of Complex Formation on Metal Ion
          Reactivity and Catalytic Processes Mechanisms
          (Role of Coordination in Catalysis) ....................... 46
    2.3.2 Qualitative Model of the Theory of PCT Complexes .... 51
  2.4 General Principles of Redox Catalysis
      Mechanisms Determination ...................................... 54
    2.4.1 Possible Mechanisms of Catalytic Redox Systems
          $Fe^{2+}_{aq} + H_2O_2$ and $Fe^{2+}_{aq} + L_n - H_2O_2$ .......... 54
    2.4.2 Stages of Revealing Catalytic Redox Reactions
          Mechanism (Methodic Aspect^2) ............................. 62
2.5 Mechanisms of Oxide and Peroxide Systems Redox Transformations Catalysis with Transition Metal Compounds .......... 75
  2.5.1 Mechanisms of O₂ Transformation in Oxide Catalytic Systems ......................................................... 75
  2.5.2 Mechanisms of H₂O₂ Decomposition in the Peroxide Catalytic Systems ............................................. 80

2.6 Mechanisms of Organic Substrates (S) Oxidation in Oxide and Peroxide Systems ........................................... 91
  2.6.1 Mechanisms of Organic Substrates Oxidation by Oxygen [Systems Mᵢ⁺(Mᵢ⁺⁺Ln⁻⁻)−O₂−S] ....................... 91
  2.6.2 Mechanisms of Organic Substrate’s Oxidation by Hydrogen Peroxide [Systems Mᵢ⁺(Mᵢ⁺⁺Ln⁻⁻)−H₂O₂−S] .............. 96

2.7 Ferryl Particles in the Catalysis of Oxidation Processes ............... 105
  2.7.1 Experimental Confirmation of Ferryl Particles Formation ................................................................. 105
  2.7.2 Quantum-Chemical Methods of Ferryl (Manganyl) Particles Formation Study .................................... 107

References .................................................................................................................. 113

3 Biochemical Processes and Metal Complexes’ Role as Catalysts ......... 123
  3.1 Catalytic Influence of Transition Metal Compounds on Biological Processes ............................................ 123
    3.1.1 Role of Transition Metal Ions in Biological Systems .......... 124
    3.1.2 Catalytic Reactions in the Initiation of Lipid Peroxidation ......................................................... 128
    3.1.3 Ligands Influence of Haber–Weiss Reaction ................................................................. 133
    3.1.4 Toxicity of O₂ Reduced Forms with Regard to Biological Systems and Methods of Protection ........... 136
    3.1.5 Role of Bleomycin and Its Models in DNA Deterioration ............................................. 142
    3.1.6 Intermediates of Ferryl Particles Type in Biochemical Systems .................................................. 155
  3.2 Enzymes and Their Modeling ............................................. 161
    3.2.1 Mechanisms of Some Enzymes’ Functioning and Their Modeling: Modeling of Monooxidases in Alkanes, Alkenes, and Other Substrates Hydroxylation and Epoxidation ....................................................... 161
    3.2.2 Dopamine β-Hydroxylase and Its Models ......................................................... 203
    3.2.3 Model Systems of Dioxygenases ................................................................. 206
    3.2.4 Model Systems of Catalase ........................................................................ 212
    3.2.5 Peroxidases and Their Model Systems ................................................................. 219
    3.2.6 Superoxide Dismutase and Its Models ................................................................. 231
    3.2.7 Models of Oxidases (Laccase, Cytochrome C, and Galactose Oxidase) ........................................... 236

References .................................................................................................................. 244
4 Catalytic Processes and Human Diseases ........................................ 261
  4.1 Catalytic Free Radical Processes In Vivo and Toxicity of Oxygen Reduction Products ........................................ 261
  4.2 Stress and Catalytic Processes .............................................. 267
  4.3 Inflammatory Processes and Role of Metal Compounds .......... 279
  4.4 Role of Enzymes and Metal Compounds in Phagocytosis ........... 284
  4.5 Metal-Catalyzed Oxidation and Ageing .................................. 289
    4.5.1 Oxidative Damage of Proteins and Enzymes, and Ageing ... 289
    4.5.2 Mitochondria Damage with Free Radicals and Ageing .......... 292
    4.5.3 Mechanism of Lipofuscin Formation and Ageing ............... 294
    4.5.4 The Role of Antioxidant Enzymes and Substances in Cellular Ageing ........................................ 295
  4.6 Diseases of Joints and Tissues and Catalytic Free Radical Processes ........................................ 299
  4.7 Catalytic and Radical Processes on Atherosclerosis and Myocardial Ischemia ........................................... 301
    4.7.1 Catalytic and Radical Processes on Atherosclerosis .......... 301
    4.7.2 Myocardial Deteriorations and Catalytic Processes with Free Radicals Formation ................................ 307
References ............................................................................. 310

5 Catalytic Oxidation of Oxyacids and Natural Polyphenols .......... 319
  5.1 Metabolic Cycles of Tri- and Dicarbonic Acids ...................... 319
  5.2 Catalytic Processes of Dicarbonic Acids of Baroud Cycle Transformations ................................................. 322
    5.2.1 Catalytic Processes of Baroud Cycle Oxyacids Transformations ................................................. 322
    5.2.2 General Regularities of the Reduction–Oxidation Conversions of the Baroud Cycle Oxyacids ................. 338
  5.3 Catalytic Transformations of Natural Polyphenols ................. 341
    5.3.1 Role of Natural Polyphenols and Their Catalytic Oxidative Transformations ................................ 341
    5.3.2 Catalysis of Catechins Oxidation with Oxygen and Hydrogen Peroxide in the Presence of Fe$^{3+}$ and Fe$^{2+}$ Ions .............................................................. 342
References ............................................................................. 347

6 Catalytic Processes in Ecological Chemistry ............................... 351
  6.1 Ecological Chemistry and Catalysis with Metal Complexes ....... 351
  6.2 Catalytic Processes in the Atmosphere and Acid Rain Formation .. 355
  6.3 Catalytic Redox Processes in Natural Water and Its Self-Purification ....................................................... 369
    6.3.1 Main Sources of H$_2$O$_2$, OH$^•$ and O$_2$•$^-$ (HO$_2$$^•$) Radicals Formation in Natural Water .................. 369
    6.3.2 H$_2$O$_2$ and O$_2$ Activation in Natural Water and the Role of Metal Compounds ....................................... 374
6.3.3 Photocatalytic Transformation of Nitrogen
Mineral Forms in Water ........................................ 381
6.3.4 Photocatalytic Transformations of Anthropogenic
Organic Pollutants in Water Compartments ............... 387
6.3.5 Modeling of Pollutant Transformation and
Self-purification Capacity of Natural Water ............... 390
6.4 Wastewater Treatment and Catalytic Processes .......... 396
  6.4.1 Principles of Catalytic Wastewater Treatment .......... 396
  6.4.2 Combined Redox-Photocatalytic Processes .......... 401
6.5 Catalymetry of Environmental Objects ................... 408
References .......................................................... 415

7 Homogeneous Catalysis with Metal Complexes in the
Chemical Industry and Foodstuffs Chemistry ............... 423
  7.1 Catalytic Processes in the Chemical Industry ........... 423
    7.1.1 Catalytic Oxidation of Organic Compounds in
           Model Systems and Their Possible
           Industrial Applications ................................ 423
    7.1.2 Catalytic Hydroxylation and Epoxidation
           in Industrial Processes ................................ 426
    7.1.3 Mechanisms of Some Industrial Catalytic Processes .. 434
  7.2 Foodstuffs Chemistry and Catalysis ..................... 438
    7.2.1 Catalytic Lipids Peroxidation in Foodstuffs .......... 438
    7.2.2 Distribution of Iron Compounds in Foodstuffs
           and Their Influence on Lipids Peroxidation .......... 446
    7.2.3 Role of Antioxidants in Foodstuffs Preservation .... 449
  7.3 Redox Catalytic Processes in Wine-Making .............. 454
    7.3.1 Redox Catalytic Non-Enzymatic Processes
           During Wine Maturing and Ageing ...................... 454
    7.3.2 Methods of Wine Stabilization and Improving
           of Its Organoleptic Properties ...................... 457
References .......................................................... 461

Index ............................................................... 469
Homogeneous Catalysis with Metal Complexes
Fundamentals and Applications
Duca, G.
2012, XII, 480 p., Hardcover
ISBN: 978-3-642-24628-9
