## Contents

1 **Introduction** ................................................................. 1  
   1.1 Transport Phenomena in Porous Media and Modeling .......... 1  
   1.2 Molecular Dynamics Simulation and  
       Homogenization Analysis ............................................ 2  
   1.3 Underground Disposal of HLW’s and Bentonite ................... 5  

2 **Introduction to Continuum Mechanics** ............................... 9  
   2.1 Newtonian Mechanics ............................................... 9  
   2.2 Deformation Kinematics ............................................. 11  
       2.2.1 Motion and Configuration .................................. 12  
       2.2.2 Changes of Frame and Frame Indifference ............... 16  
       2.2.3 Motion in a Non-inertial System ......................... 17  
       2.2.4 Deformation Gradient, Strain and Strain Rate .......... 19  
       2.2.5 Transport Theorems and Jump Condition .......... 25  
   2.3 Mass Conservation Law .............................................. 29  
   2.4 Law of Conservation of Linear Momentum and Stress ............. 30  
       2.4.1 Eulerian Descriptions .................................... 30  
       2.4.2 Lagrangian Descriptions .................................. 33  
   2.5 Conservation of Moment of Linear Momentum  
       and Symmetry of Stress .............................................. 35  
   2.6 Incremental Forms of the Equation of Equilibrium .......... 36  
       2.6.1 Total Lagrangian Form .................................... 36  
       2.6.2 Updated Lagrangian Form .................................. 37  
   2.7 Specific Description of the Equation of Motion ............. 38  
       2.7.1 Eulerian Equation of Motion ............................... 38  
       2.7.2 Lagrangian Equation of Motion ............................ 39  
       2.7.3 Incremental Form of the Total Lagrangian  
           Equation of Motion ............................................. 39  
       2.7.4 Incremental Form of the Updated Lagrangian  
           Equation of Motion ............................................. 39

3.3 Second Law of Thermodynamics ........................................ 90
  3.3.1 Thermal Energy and the Existence of Entropy: The First Part of the Second Law of Thermodynamics ... 91
  3.3.2 Entropy Inequality: Second Part of the Second Law of Thermodynamics ........................................ 92
  3.3.3 Second Law of Thermodynamics in a Thermo-mechanical Continuum: Lagrangian Description ♠ ........ 97

3.4 Thermodynamic Functions .............................................. 97
  3.4.1 Legendre Transformation and Convex Functions ............. 98
  3.4.2 Thermodynamic Functions in a Thermo-mechanical Field: Solids with Small Strain ................. 99
  3.4.3 Thermodynamic Functions in a Thermo-mechanical Field: A Finitely Strained Solid ♠ ........... 105
  3.4.4 Thermodynamic Functions in a Thermo-mechanical Field: A Fluid .................................. 108

3.5 Chemical Process and Thermodynamics .............................. 111
  3.5.1 Thermodynamic Variables in a Thermo-mechanochemical Field ............................................ 111
  3.5.2 Thermodynamic Functions in a Thermo-mechanochemical Field: A Small Strain Solid ............ 113
  3.5.3 Thermodynamic Functions in a Thermo-mechanochemical Field: A Finitely Strained Solid ♠ .... 118
  3.5.4 Thermodynamic Functions in a Thermo-mechanochemical Field: A Fluid .................................. 121

3.6 Mixture Theory for a Multi-component Solution ................... 122
  3.6.1 Mass Conservation Law ........................................ 124
  3.6.2 Conservations of Linear Momentum and Moment of Momentum ........................................ 128
  3.6.3 First Law of Thermodynamics in a Thermo-mechanochemical Continuum: Conservation of Energy ........................................ 130
  3.6.4 Entropy Inequality in a Thermo-mechanochemical Continuum ........................................ 132

3.7 Thermodynamics Laws and Constitutive Theory ♠ ............. 133
  3.7.1 Constitutive Theory of a Solid with Chemical Processes in the Small Strain Field ............ 134

3.8 Summary of the Framework of Non-equilibrium Thermodynamics ♠ ........................................ 135

4 Virtual Work Equation, Variational Methods and Energy Principles ........................................ 139
  4.1 Variational Method for a One-dimensional Elastic Problem .... 139
    4.1.1 Strong Form .......................................... 139
    4.1.2 Weak Form and the Virtual Work Equation .............. 140
    4.1.3 Principle of the Energy Minimization and a Variational Method ........................................ 141
4.2 Variational Method for a Three-dimensional Elasticity Problem .................................................... 143
  4.2.1 Strong Form ................................................. 143
  4.2.2 Weak Form and the Virtual Work Equation ............... 144
  4.2.3 Principle of the Energy Minimization and a Variational Method ......................................... 145
4.3 The Penalty Method and the Lagrangian Multiplier Method ...... 145
4.4 Convolution Integral and Energy Forms for Parabolic and Hyperbolic PDEs ................................................ 147
  4.4.1 Energy Form of a Parabolic PDE .......................... 149
  4.4.2 Energy Form of a Hyperbolic PDE ........................ 150
4.5 Interpolation, Approximation and Galerkin Method ............... 151
5 Classical Theory of Diffusion and Seepage Problems in Porous Media ................................................................ 157
  5.1 Representative Elementary Volume and Averaging .......... 157
  5.2 Diffusion and Seepage Problem for a Multi-component Solution in Saturated Porous Media .................. 159
    5.2.1 Mass Conservation for the Fluid Phase ................. 160
    5.2.2 Mass Conservation in the Solid Phase ................. 163
    5.2.3 Seepage Theory for the Incompressible Fluid .......... 166
    5.2.4 Seepage Theory for the Compressible Fluid ........... 169
  5.3 Navier-Stokes Equation and the Classical Permeability Theory ... 169
    5.3.1 Pipe Flow: Hagen-Poiseulle Flow ....................... 170
    5.3.2 Flow Through an Assembly of Pipes and Its ‘Permeability’ ................................................. 172
    5.3.3 Flow in a Tank Filled with Solid Particles and Its Permeability ............................................. 173
  5.4 Fick’s Law and Evaluation of the Diffusion Coefficient .......... 174
  5.5 Adsorption Isotherm and the Distribution Coefficient............ 177
    5.5.1 Langmuir’s Equilibrium Adsorption Isotherm ........ 178
    5.5.2 Freundlich’s Equilibrium Adsorption Isotherm ....... 181
    5.5.3 Temkin’s Equilibrium Adsorption Isotherm .......... 181
    5.5.4 Langmuir’s Nonequilibrium Adsorption Isotherm ... 182
    5.5.5 Freundlich’s Nonequilibrium Adsorption Isotherm ... 182
  5.6 Transport Equations and Similitude Laws .......................... 182
6 Classical Theory of Consolidation for Saturated Porous Media ...... 185
  6.1 Mass Conservation Law and Seepage Equation .................. 185
  6.2 Conservation of Linear Momentum, Effective Stress and Biot’s Consolidation Theory .... 186
  6.3 Finite Strain Theory of Consolidation .......................... 187
    6.3.1 Seepage Equation of Consolidation in a Lagrangian Form .................................................. 188
    6.3.2 Lagrangian Equation of Equilibrium ...................... 189
    6.3.3 Incremental Form of the Equation of Equilibrium ...... 190
6.4 A Weak Form of Biot’s Consolidation Equations
   and Finite Element Analysis ........................................ 191
   6.4.1 Strong Form .................................................. 191
   6.4.2 Weak Form .................................................. 192
   6.4.3 Finite Element Analysis ..................................... 193
6.5 The Cam Clay Model ................................................ 196
   6.5.1 Normally Consolidated Clay ............................... 196
   6.5.2 Over-consolidated Clay ................................. 197
   6.5.3 The Original Cam Clay Model ............................. 198
   6.5.4 Modified Cam Clay Model ................................. 204
   6.5.5 Elasto-plastic Constitutive Law ........................... 205

7 Introduction to Homogenization Analysis ............................ 207
   7.1 One-dimensional Problem of an Elastic Bar ................. 207
   7.2 Micro/Macro Coordinates ...................................... 207
   7.3 Microscale and Macroscale Problems ......................... 208

8 Homogenization Analysis and Permeability of Porous Media .... 213
   8.1 Micro-inhomogeneous Porous Media and Stokes’ Equation .... 214
   8.2 Seepage Theory for Two-scale Porous Media ................. 214
      8.2.1 Homogenization Analysis and Seepage Problem of Porous Media ..................... 215
      8.2.2 Analytical Solution for a Microscale Poiseulle Flow .... 219
      8.2.3 Finite Element Analysis for the Mass Conservation Equation in the Micro-domain .... 220
      8.2.4 Numerical Results of Seepage Analysis for Pure Smectitic Clay ...................... 223
      8.2.5 Three-dimensional Seepage Analysis of Sand ............. 227
   8.3 A Permeability Theory for Multiscale Porous Media ......... 230
      8.3.1 Multiscale Permeability Theory .......................... 231
      8.3.2 Seepage Analysis of Bentonite .......................... 238

9 Homogenization Analysis of Diffusion in Porous Media ........ 241
   9.1 Micro-inhomogeneous Porous Media and Diffusion Problems ... 241
   9.2 Diffusion Theory for Two-scale Porous Media ............... 244
      9.2.1 HA for Diffusion Problems in Porous Media ............. 244
      9.2.2 Simulation of a Through-diffusion Test ................. 248
      9.2.3 HA Diffusion Equation with Higher Order Derivatives ............. 250
   9.3 Diffusion Problem for Multiscale Porous Media ............. 253
      9.3.1 Multiscale HA for Diffusion Problems in Porous Media ......................... 253
   9.4 Diffusivity of Compacted Bentonite Considering Micro-structure ...................... 257
      9.4.1 Experimental Data of Bentonite Diffusivity .............. 257
      9.4.2 Microscale Problem of HA for Bentonite ................. 259
   9.5 HA and Similitude for the Seepage/Diffusion Problem .......... 264
## 10 Long-Term Consolidation of Bentonite and a Homogenization Analysis of the Flow Field

10.1 Long-term Consolidation Test on Bentonite

10.2 MD/HA Seepage Analysis and 1D Consolidation Theory

10.2.1 1D Finite Strain Consolidation Theory

10.2.2 Weak Form of the 1D Finite Strain Consolidation Equation

10.2.3 FEM for 1D Finite Strain Consolidation Equation

10.2.4 Relation Between Permeability and Void Ratio for Compacted Bentonite

10.2.5 Consolidation Experiment and Inhomogeneous 1D Analysis

## A Introduction to Vectors

A.1 Vectors in \( \mathbb{R}^3 \)

A.2 Inner Product and the Length of Vectors

A.3 Coordinate Transformation

A.4 Outer Product

## B Partial Differentiation and Integral Theorems

B.1 Calculus of Partial Differentials

B.2 Gauss-Green Theorem

B.3 Stokes’ Theorem and Exact Differentiability

## C A Summary of Linear Vector Spaces

C.1 Algebraic System

C.2 A Linear Vector Space \( \mathcal{V} = \{ X, +, \cdot \} \)

C.3 Basis and Dimension

C.4 Topological Spaces

C.5 Cauchy Sequence and Complete Space

C.6 Functionals and Dual Space

C.7 Tensor Product and Tensor Space

C.8 On Completeness of Function Spaces

C.8.1 Sequence Space \( l^p \)

C.8.2 Completeness of \( l^p \)

C.8.3 Completeness of \( C[a, b] \) Under the Norm \( \| x \|_\infty \)

C.8.4 Bessel’s Inequality and Parseval’s Equality

C.8.5 Completeness of Fourier Basis \( \{ \phi_n \} \)

## D Classical and Chemical Thermodynamics

D.1 Energy Conservation Law and Thermodynamic Systems

D.2 Existence of Entropy and Thermal Energy: First Part of the Second Law of Thermodynamics

D.2.1 Carnot Cycle

D.2.2 Entropy as a State Variable
