Contents

1 Introduction .................................................. 1
  1.1 Scope of the Book . ........................................ 2
  1.2 Degradation of Speech Signals ......................... 3
  1.3 Need for Quality Assessment and Control of Speech Signals . 4
  1.4 Organization of the Book . .......................... 5
  References .................................................. 6

2 Speech Quality ............................................. 7
  2.1 Speech Quality Assessment ............................ 7
  2.2 Objective Speech Quality Measures ................. 8
    2.2.1 SNR Measures .................................... 8
    2.2.2 LP-Based Measures ............................... 11
    2.2.3 Weighted Spectral Slope Measures .......... 12
    2.2.4 Articulation Index ............................... 12
    2.2.5 Speech Transmission Index ..................... 13
    2.2.6 PESQ ............................................. 13
  2.3 Subjective Speech Quality Measures ................ 15
    2.3.1 Opinion Scores .................................. 15
    2.3.2 Speech Intelligibility ......................... 16
  2.4 Conclusion ............................................. 18
  References .................................................. 19

3 The Japanese Diagnostic Rhyme Test ...................... 21
  3.1 Rhyme Tests ........................................... 21
  3.2 Diagnostic Rhyme Tests ................................ 21
  3.3 Japanese Consonant Taxonomy ....................... 24
  3.4 Japanese DRT Word-Pair List ....................... 25
  3.5 The Evaluation Procedure .......................... 27
  3.6 Conclusion ............................................. 27
  References .................................................. 28
4 The Effect of Word Familiarity on the DRT Scores
   4.1 Word Familiarity and Its Effect on Speech Intelligibility
   4.2 Experimental Procedures
   4.3 Results and Discussions
   4.4 Conclusion
   References

5 Examples of Noise-Degraded Speech Intelligibility Measurements Using the Japanese DRT
   5.1 Overview
   5.2 Experimental Setup
   5.3 Results and Discussions
      5.3.1 Comparison of Intelligibility Versus SNR by Speaker Gender
   5.4 Conclusion
   References

6 DRT Evaluation of Localized Speech Intelligibility in Virtual 3-D Acoustic Space
   6.1 Multi-Party Audio Conferencing System Using Localized Speech in 3-D Virtual Acoustic Space
   6.2 Intelligibility of Localized Speech Without Audio Coding
      6.2.1 Experimental Setup
      6.2.2 Source Placement
      6.2.3 Speech Localization Using HRTFs
      6.2.4 Localization Using Real Sources
      6.2.5 Results
   6.3 Effect of Stereo Audio Coding on Speech Intelligibility
      6.3.1 The HE-AAC Coding Standard
      6.3.2 Joint Stereo Coding
      6.3.3 Parametric Stereo Coding
      6.3.4 Speech Intelligibility of Stereo-Coded Localized Speech Without Competing Noise
      6.3.5 Speech Intelligibility of Stereo-Coded Localized Speech with Competing Noise
   6.4 Conclusion
   References

7 Other DRT Evaluation Examples
   7.1 DRT Evaluation of Efficiency of Speaker-Dependent Maskers
      7.1.1 Speaker-Dependent Babble Noise
      7.1.2 Speech Intelligibility of Speech with Maskers in Simulated Non-Reverberant Environment
   References
