Notations	xv
Introduction	xix
Part I Projector based approach	
1 Linear constant coefficient DAEs	3
1.1 Regular DAEs and the Weierstraß–Kronecker form	3
1.2 Projector based decoupling of regular DAEs	10
1.2.1 Admissible matrix sequences and admissible projectors	10
1.2.2 Decoupling by admissible projectors	23
1.2.3 Complete decoupling	30
1.2.4 Hierarchy of projector sequences for constant matrix pencils	36
1.2.5 Compression to a generalized Weierstraß–Kronecker form ..	37
1.2.6 Admissible projectors for matrix pairs in a generalized Weierstraß–Kronecker form	41
1.3 Transformation invariance	45
1.4 Characterizing matrix pencils by admissible projectors	47
1.5 Properly stated leading term and solution space	50
1.6 Notes and references	52
2 Linear DAEs with variable coefficients	57
2.1 Properly stated leading terms	58
2.2 Admissible matrix function sequences	60
2.2.1 Basics	60
2.2.2 Admissible projector functions and characteristic values	65
2.2.3 Widely orthogonal projector functions	75
2.3 Invariants under transformations and refactorizations	79
2.4 Decoupling regular DAEs	86
2.4.1 Preliminary decoupling rearrangements	86

2.4.2	Regularity and basic decoupling of regular DAEs	90
2.4.3	Fine and complete decouplings	104
2.4.3.1	Index-1 case	104
2.4.3.2	Index-2 case	106
2.4.3.3	General benefits from fine decouplings	108
2.4.3.4	Existence of fine and complete decouplings	111
2.5	Hierarchy of admissible projector function sequences for linear DAEs	117
2.6	Fine regular DAEs	118
2.6.1	Fundamental solution matrices	119
2.6.2	Consistent initial values and flow structure	123
2.6.3	Stability issues	127
2.6.4	Characterizing admissible excitations and perturbation index	132
2.7	Specifications for regular standard form DAEs	137
2.8	The T-canonical form	140
2.9	Regularity intervals and critical points	146
2.10	Strangeness versus tractability	160
2.10.1	Canonical forms	160
2.10.2	Strangeness reduction	164
2.10.3	Projector based reduction	166
2.11	Generalized solutions	171
2.11.1	Measurable solutions	171
2.11.2	Distributional solutions	173
2.12	Notes and references	174
3	Nonlinear DAEs	183
3.1	Basic assumptions and notions	184
3.1.1	Properly involved derivative	184
3.1.2	Constraints and consistent initial values	187
3.1.3	Linearization	195
3.2	Admissible matrix function sequences and admissible projector functions	198
3.3	Regularity regions	208
3.4	Transformation invariance	224
3.5	Hessenberg form DAEs of arbitrary size	229
3.6	DAEs in circuit simulation	239
3.7	Local solvability	250
3.7.1	Index-1 DAEs	251
3.7.2	Index-2 DAEs	259
3.7.2.1	Advanced decoupling of linear index-2 DAEs	259
3.7.2.2	Nonlinear index-2 DAEs	261
3.7.2.3	Index reduction step	268
3.8	Advanced localization of regularity: including jet variables	272
3.9	Operator settings	281

- 3.9.1 Linear case 283
- 3.9.2 Nonlinear case 287
- 3.10 A glance at the standard approach via the derivative array
and differentiation index 290
- 3.11 Using structural peculiarities to ease models 300
- 3.12 Regularity regions of DAEs with quasi-proper leading terms 304
- 3.13 Notes and references 307

Part II Index-1 DAEs: Analysis and numerical treatment

- 4 Analysis** 317
 - 4.1 Basic assumptions and notions 317
 - 4.2 Structure and solvability of index-1 DAEs 320
 - 4.3 Consistent initial values 334
 - 4.4 Notes and references 336
- 5 Numerical integration** 339
 - 5.1 Basic idea 340
 - 5.2 Methods applied to ODEs and DAEs in standard form 345
 - 5.2.1 Backward differentiation formula 345
 - 5.2.2 Runge–Kutta method 346
 - 5.2.3 General linear method 350
 - 5.3 Methods applied to DAEs with a properly involved derivative 352
 - 5.3.1 Backward differentiation formula 352
 - 5.3.2 Runge–Kutta method 353
 - 5.3.3 General linear method 355
 - 5.4 When do decoupling and discretization commute? 356
 - 5.5 Convergence on compact intervals and error estimations 361
 - 5.5.1 Backward differentiation formula 361
 - 5.5.2 IRK(DAE) method 364
 - 5.5.3 General linear method 369
 - 5.6 Notes and references 371
- 6 Stability issues** 375
 - 6.1 Preliminaries concerning explicit ODEs 375
 - 6.2 Contractive DAEs and B-stable Runge–Kutta methods 378
 - 6.3 Dissipativity 384
 - 6.4 Lyapunov stability 387
 - 6.5 Notes and references 394

Part III Computational aspects

- 7 Computational linear algebra aspects** 399
 - 7.1 Image and nullspace projectors 400

- 7.2 Matters of a properly stated leading term 402
- 7.3 The basic step of the sequence 404
 - 7.3.1 Basis representation methods 406
 - 7.3.2 Basis representation methods—Regular case 408
 - 7.3.3 Projector representation method 409
- 7.4 Matrix function sequences 413
 - 7.4.1 Stepping level by level 413
 - 7.4.2 Involved version for the regular case 415
 - 7.4.3 Computing characteristic values and index check 416
- 8 Aspects of the numerical treatment of higher index DAEs 419**
 - 8.1 Practical index calculation 419
 - 8.2 Consistent initialization 424
 - 8.3 Numerical integration 426
 - 8.4 Notes and references 437
- Part IV Advanced topics**
- 9 Quasi-regular DAEs 441**
 - 9.1 Quasi-proper leading terms 441
 - 9.2 Quasi-admissible matrix function sequences and admissible projector functions 446
 - 9.3 Quasi-regularity 452
 - 9.4 Linearization 455
 - 9.5 A DAE transferable into SCF is quasi-regular 457
 - 9.6 Decoupling of quasi-regular linear DAEs 462
 - 9.7 Difficulties arising with the use of subnullspaces 468
 - 9.8 Notes and references 471
 - 9.9 Hierarchy of quasi-admissible projector function sequences for general nonlinear DAEs 475
- 10 Nonregular DAEs 477**
 - 10.1 The scope of interpretations 478
 - 10.2 Linear DAEs 482
 - 10.2.1 Tractability index 482
 - 10.2.2 General decoupling 486
 - 10.2.2.1 G_μ has full column rank 489
 - 10.2.2.2 Tractability index 1, G_1 has a nontrivial nullspace 493
 - 10.2.2.3 Tractability index 2, G_2 has a nontrivial nullspace 497
 - 10.3 Underdetermined nonlinear DAEs 499
 - 10.4 Notes and references 502

- 11 Minimization with constraints described by DAEs** 505
 - 11.1 Adjoint and self-adjoint DAEs 505
 - 11.2 Extremal conditions and the optimality DAE 510
 - 11.2.1 A necessary extremal condition and the optimality DAE.... 510
 - 11.2.2 A particular sufficient extremal condition 520
 - 11.3 Specification for controlled DAEs 522
 - 11.4 Linear-quadratic optimal control and Riccati feedback solution 525
 - 11.4.1 Sufficient and necessary extremal conditions 526
 - 11.4.2 Riccati feedback solution..... 527
 - 11.5 Notes and references 536

- 12 Abstract differential-algebraic equations** 539
 - 12.1 Index considerations for ADAEs 540
 - 12.2 ADAE examples 544
 - 12.2.1 Classical partial differential equations 545
 - 12.2.1.1 Wave equation 545
 - 12.2.1.2 Heat equation 546
 - 12.2.2 A semi-explicit system with parabolic and elliptic parts 548
 - 12.2.3 A coupled system of a PDE and Fredholm
 - integral equations 552
 - 12.2.4 A PDE and a DAE coupled by a restriction operator 554
 - 12.3 Linear ADAEs with monotone operators 554
 - 12.3.1 Basic functions and function spaces 555
 - 12.3.2 Galerkin approach 558
 - 12.3.3 Solvability 564
 - 12.3.4 Continuous dependence on the data 571
 - 12.3.5 Strong convergence of the Galerkin method 574
 - 12.4 Notes and references 577

- Appendices** 581
 - A Linear algebra – basics** 581
 - A.1 Projectors and subspaces 581
 - A.2 Generalized inverses 589
 - A.3 Parameter-dependent matrices and projectors 591
 - A.4 Variable subspaces 594

 - B Technical computations** 599
 - B.1 Proof of Lemma 2.12 599
 - B.2 Proof of Lemma 2.41 605
 - B.3 Admissible projectors for $Nx' + x = r$ 612

 - C Analysis** 627
 - C.1 A representation result 627

C.2 ODEs 629

C.3 Basics for evolution equations 632
