Preface

The book recounts my scientific journey through the not-yet-fully explored territory of wavelets applications in system identification, and herein I would like to express my sincere gratitude to all who influenced me with their ideas and supported during this search.

In particular I would like to sincerely thank Prof. Zygmunt Hasiewicz and Prof. Włodzimierz Greblicki for guiding me between the very first Scyllas of wavelet theory and Charybdises of nonparametric system identification.

This adventurous quest would have surely been more arduous without the help from Prof. Czesław Smutnicki, Prof. Ewaryst Rafajłowicz, Prof. Jerzy Rozenblit, and Prof. Michael W. Marcellin. I am also grateful to many traveling companions—my workmates from Department of Control and Optimization, Dr. Grzegorz Mzyk, Dr. Paweł Wacheli, Dr. Ryszard Klempous, Dr. Ewa Szlachcic, and Dr. Jerzy Kotowski, and my colleagues from Institute of Computer Engineering, Control and Robotics, Prof. Ewa Skubalska-Rafajłowicz, Prof. Janusz Biernat, Prof. Stanisław Piestrak, and Dr. Krzysztof Berezowski—for countless and vigorous scientific disputes.

Finally, I would like to acknowledge the research support of my home Wrocław University of Technology (PWr), Polish Ministry of Science and Higher Education (MNiSW), and University of Arizona.
