

Contents

1	Introduction and historical grounding	1
1.1	Introduction	1
1.2	Historical grounding	2
2	Physical background	5
2.1	Basic radiation heat transfer theory	5
2.1.1	Black body radiation	7
2.1.2	Radiation of real bodies	12
2.1.3	Atmospheric transmittance	19
3	IR Scanner	23
3.1	Optical system	23
3.1.1	Lens and windows	24
3.1.2	Scanning mechanism	28
3.2	IR temperature detector	29
3.2.1	Thermal detectors	30
3.2.2	Photon detectors	31
3.2.3	Cooling system	32
3.2.4	Performance of infrared detectors	34
3.3	Electronic processor and signal conditioner	35
3.4	IR scanner performance	36
3.4.1	Thermal sensitivity	36
3.4.2	Spatial resolution	37
3.4.3	Acquisition frequency	39
3.4.4	Temperature and dynamic ranges	40
3.4.5	Choice of IR working band	40
3.5	IR scanner radiometric calibration	44

- 4 Heat Flux sensors 49**
 - 4.1 Heated thin foil sensor 53
 - 4.1.1 Limits of the isothermal assumption 55
 - 4.1.2 Data analysis and experimental procedure 58
 - 4.2 Thin film sensor 59
 - 4.2.1 Semi-infinite wall model 60
 - 4.2.2 Effects of the finite thickness of the sensor 61
 - 4.2.3 Data Analysis 65
 - 4.3 Thin skin (wall calorimeter) sensor 67
 - 4.3.1 Limits of the isothermal assumption 68
 - 4.3.2 Data analysis 71
 - 4.4 Periodic convective heat transfer 74
- 5 Restoration of thermal images 83**
 - 5.1 Errors due to the IR scanner 84
 - 5.2 Errors due to the heat flux sensor 85
 - 5.2.1 Heated thin foil. 86
 - 5.2.2 Thin skin and thin film 92
 - 5.3 Image restoration 95
- 6 Some practical considerations. 101**
 - 6.1 Design of heating elements 101
 - 6.1.1 Foil heaters 102
 - 6.1.2 Printed circuit board heaters. 105
 - 6.2 Laplacian sensor 111
 - 6.3 Emissivity coefficient and black body 116
 - 6.4 Optical calibration of the camera 118
 - 6.4.1 Pinhole camera model 121
 - 6.4.2 Optical temperature reconstruction 124
 - 6.5 Dual-band thermography. 125
- 7 Applications. 129**
 - 7.1 Natural convection 129
 - 7.2 Film cooling 135
 - 7.3 Impinging Jets 146
 - 7.4 Airfoils Transition/Separation 156
 - 7.5 180° turn and ribbed channels 161
 - 7.6 Rotating disks 174
 - 7.7 Micro-systems 180
 - 7.8 Two-phase flows 182
 - 7.9 Hypersonic flows 186
 - 7.10 Fins 192
